Finally employment in the government sectors is the most common option of job for Science graduates.

### **Department of Bengali – Programme Outcomes**

History of the Bengali language has evolved over time and through the ages. No wonder that the Bengali language with its basic characteristics and nuances has a rich cultural heritage. The core and the DSE courses aim to provide an all encompassing knowledge about the origin, gradual evolution and the development of Bengali literature and culture spanning from pre 19th century to the 20th century. The course helps the students to get a thorough glimpse of the growth of Early, Mediaeval and Modern Bengali Literature and its inseparable connection with our state's culture. More over the students are enlightened about the historical analysis of the Bengali literature and its perceptible changes under the colonial influence. This is on one hand make the students aware of the historical perspective and arouse their interest in the history, culture, economy and society of Bengal and Bengali people on the other. In their journey through their study of Bengali literature they are made conscious of the society and culture and history of Bengal through their knowledge of Bengali prose, poetry, short story, drama and novel. They are thus enlightened on the origin of Bengali language originating from the Indo- European family of languages and how regional variations occurred within it through the passage of time. The skill enhancement course gives them a vast knowledge on the growth of printing press, various publications leading to development of mass culture. These are expressed through writings in various journals, periodicals , newspapers and magazines .Higher studies in the field would open up avenues in various job opportunities like as journalists, translators, librarians, teachers and in spheres of Research ,Advertising, Print media, Audio visual media and Publishing Houses.

#### **Programme Outcomes (Honours Course):**

- PO1. History of the study of Bengali language would help them to understand the stages of development of Bengali language from its origin to the 20th century. Students are thus made aware of the Bengal heritage and World literature too. It enables them to make journeys from 8<sup>th</sup> to 12<sup>th</sup> century of the subcontinent to Contemporary representations in literature.
- PO2. Study of the language of the linguistics in the historical perspective would help them to learn how Bengali language evolved and changed over time.
- PO3. It would help them to grasp the complexity of the language and as a communicative medium in the proper social,cultural and cognitive perspective.

Learn about child psychology in a variety of notable child-centered storybooks.</p> <p>Module - 2</p>

NETAJI NAGAR COLLEGE FOR WOMEN  
DEPARTMENT OF BENGALI  
COURSE OUTCOME BENGALI(HONOURS)

				<p>C.O.2 They will know about the famous poet Sukumar Roy and his works. Students will gain a great deal of knowledge about the technique of presentation in a humorous manner.</p> <p>Module-3</p> <p>C.O.3 They will know about some famous writers of Sunil Gangopadhyay and Satyajit Ray. Students will also be interested in earning a living from their writing style.</p>
5		<p>BNG-A-SEC-A-3-2-TH FULL MARKS 100 2 CREDITS</p>	BYABOHARIK BANGLA	<p>C.O.1. From the skill enhancement course student can learn how to write a story from a given cue.</p> <p>C.O.2. They use to practice how to write a script for audio visual media and drama from a literary text.</p> <p>C.O.3. Students will learn to use rhetoric and prosody in poetry and about proper</p>

COURSE OUTCOME BENGALI(HONOURS)

				<p>pronunciation. It will help them to enhance their ability of recitation.</p> <p>C.O.4.Students can learn about interrelationship between film and literature and adaptation through the classics like 'Pather Panchali' by Satyajit Ray,'Khudito Pasan' by Tapan Sinha, 'Bari theke paliye' by Rittik kumar Ghatak</p>
6	SEMESTER 6 JANUARY TO JUNE	BNG-A-CC-6-13-TH FULL MARKS 100 6 CREDITS - TH-TU 5+1	MODERN BENGALI POETRY (ADHUNIK BANGLA KABYO KOBITA)	<p>C.O1. Students will be aware and enriched about Madhusudan Dutta's 'Birangana kabya'.</p> <p>C.O.2. Students will learn about the art form of modern poetry after Rabindranath and Rabindra.</p> <p>C.O.3.This course will be helpful for students to read and write poetry.</p>
6		BNG-A-CC-6-14-TH-TU FULL MARKS 100 6 CREDITS 5+1	HISTORY OF SANSKRIT,ENGLISH,HINDI LITERATURE(SONGSKRITO,INGREJIO PROTIBESHI SAHITYER ITIHAS)	C,O1.Apart from Bengali literature, students will be able to know about Sanskrit literature, English literature and history of Hindi literature

NETAJI NAGAR COLLEGE FOR WOMEN  
DEPARTMENT OF BENGALI  
COURSE OUTCOME BENGALI(HONOURS)

				<p>and writers, they will be rich.</p> <p>C.O.2. Students will gain and initial introduction to the history of Sanskrit, English and Hindi literature and in that light their assessment of Bengali literature will become more transparent.</p> <p>C.O.3. Sanskrit, English and Hindi literature lessons will awaken the mental developmental consciousness of the students</p>
6		<p>BNG-A-DSE-A-6-3-TH-TU FULL MARKS 100 6 CREDITS 5+1</p>	<p>BANGLA GOYENDA SAHITYO,KOLPOBIGYAN ASHROYI ROCHONA EBONG OLOUKIK KAHINI</p>	<p>C.O.1. It increases the curiosity of reading habit among the students.</p> <p>C.O.2.They find very popular and familiar stories as their texts.</p> <p>C.O.3. From Sojarur Knata by Saradindu Bandopadhyay they can have some idea about the complicated psychological structure of human beings.</p> <p>C.O.4.In Shonku Samagra by Satyajit Ray students will find the very popular adolescents literature as the part of</p>

				From this course, students learn about the partition and the political, economic and social context of India at that time.
6		BNG-G-LCC(2)6-2-TH-TU FULL MARKS 100 6 CREDITS 5+1	SAMOYIK POTRO O KOTHA SAHITYO	<p>C.O.1.Students will be aware of the contribution of Bengali periodicals.</p> <p>C.O.2. Students will learn about Bonkimchandra Chattapadhyay's ' Rajoni ' novel and will enjoy the literary juices.</p> <p>C.O.3. Students will learn about different types of short stories and short story writers.</p> <p>C.O.4.Through reading different types of short stories and novel, social consciousness, culture and nature consciousness will be awakened in the students.</p>

## NETAJI NAGAR COLLEGE FOR WOMEN

### DEPARTMENT OF BOTANY

## PROGRAMME OUTCOMES

- A. **B.Sc. BOTANY (HONOURS)(1+1+1/CBCS)** – At the end of the 3-year programme, Honours students of this department will be equipped with the following qualities:

PO-1 **Clarity of Thought:** Recognize what is expected of them in different situations and what they wish to achieve.

PO-2 **Confidence:** In their capabilities, in conducting their day-to-day affairs, in their interactions with others, and in seeking out their objectives.

PO-3 **Perseverance:** To keep working diligently till they reach the desired goal; be it in studies or any other work.

PO-4 **Discipline:** Be able to prioritize between different works at any particular time and immerse oneself completely into it.

PO-5 **Social Compatibility:** The ability to empathize with others and work as a team player.

PO-6 **Multitasking:** The capability to adapt to performing multiple duties in life.

PO-7 **Communication:** Effectively able to communicate their thoughts, ideas and understanding in the medium of instruction English, verbally, in the written format, as well as through the electronic mode.

PO-8 **Environmental Awareness:** Appreciate the fragility of the environment and understand their duty towards improving it.

PO-9 **Scientific Thinking:** Understand the myriad plant forms on earth, their various life processes, the contribution of plants towards sustenance of all life on the planet, and how this knowledge can be transferred from the classroom to be applied in practice to benefit all humankind.

PO-10 **Informed Decision Making:** Be aware of the latest avenues of employment available to them, and take critically analyzed decisions on the options best suited for them after considering all perspectives, social and personal, to choose from among higher studies, professional courses, or immediate jobs.

- B. **B. Sc. BOTANY (GENERAL) (1+1+1/CBCS)** – At the end of the 3-year programme, General students of this department will be equipped with the following qualities:

PO-1 **Clarity of Thought:** Recognize what is expected of them in different situations and what they wish to achieve.

PO-2 **Perseverance:** To keep working diligently till they reach the desired goal; be it in studies or any other work.

PO-3 **Discipline:** Be able to prioritize between different works at any particular time and immerse oneself completely into it.

PO-4 **Social Compatibility:** The ability to empathize with others and work as a team player.

PO-5 **Scientific Thinking:** Understand the myriad plant forms on earth, their various life processes, and the contribution of plants towards sustenance of all life on the planet.

# **PROGRAMME SPECIFIC OUTCOMES**

## **B.Sc. BOTANY (HONOURS)(CBCS)**

CC-1: This study will help to understand the basic concepts of lower group of plants. Students will acquire fundamental knowledge regarding algal, bacterial and viral diversity, their life cycle and economic importance through theory and practicals.

CC-2: General idea about features of Fungi, their uniqueness, how they are classified, their types and their importance; Important concepts of Plant Pathology, details of the host-parasite interaction during disease development, disease control techniques, and major diseases.

CC-3: Anatomical features of plant primary parts, secondary growth, the principles of physics governing distribution of mechanical tissues in plants, and its use in taxonomy, pharmacognosy and forensic science.

CC-4: Know distinguishing features of Archegoniate groups, their phylogenetic and economic significance.

CC-5: Learn about Pteridophyte and gymnosperm plant fossils from different eras and their evolutionary significance; structure of spores and pollen and their utility in modern life.

CC-6: Study of embryology helps the students to gain knowledge on structure and development of plant reproductive organs with a better understanding of the process of fertilization, endosperm and embryogeny.

CC-7: Helps in understanding the rules for naming of plants, their classification and preservation, their applications in different fields; an idea of modern systematics, and the features of some of the large plant families.

CC-8: Awareness about Flora of different Phytogeographic and Endemic regions of India, and with Ecological concepts, Succession, Phytoremediation and Biodiversity Conservation; familiarity with theories of Evolution and concepts of Speciation, Co-evolution, Adaptive Radiation and Reproductive Isolation, with phylogenetic patterns seen in different plant groups.

CC-9: It gives knowledge about contribution of major economically important crops to increase and improve supply of medicines, food fibres and other plant products. To create awareness on the utility of drugs of natural origin, which are not only economical but even safer too. This study will make them aware of natural resources and the importance of conserving it along with the role of plants in human welfare.

CC-10: Deals with the behaviour of genes and chromosomes, and how they affect inheritance; changes in their structure, and the arrangement of genes in chromosomes.

SEC-A-1: shows the practical use of algae, fungi and bacteria in different industries, for the benefit of people.

SEC-B-4: This study will help to know the history of mushroom culture, scope and present status of mushroom cultivation in India and other parts of the world. It also explores the economic importance of mushrooms, different delicious recipes of mushrooms and commerce in the mushroom industry.

### **B.Sc. BOTANY (GENERAL)(CBCS)**

CC-1: Students will be able to compare and contrast the characteristics of the different groups of algae, fungi, bryophytes, their modes of communication, life histories and their significance for the environment; understand basic pathological terms and major diseases; anatomy of plant parts and stele, and how secondary growth takes place.

CC-2: This study will help the students to learn about details of pteridophytes and gymnosperms and their fossil forms; morphology of plant reproductive parts, and about major angiosperm families.

CC-3: This conveys an idea about the cell ultrastructure, and the behaviour of chromosomes and genes.

CC-4: This comprehensive course will help to understand the nature and basic concepts of all the plant cell components and their metabolism at the molecular level. Additionally physio-biochemical properties of a plant and its growth regulators will be highlighted.

### **B.Sc. BOTANY (HONOURS)(1+1+1)**

**PAPER-V:** Awareness about the fundamental principles and processes of biochemistry, physiology and pharmacognosy.

**PAPER-VI:** Conveys details of the cell ultrastructure, genes and chromosomes; and an introduction to the fundamentals of biotechnology, and plant breeding processes.

### **B.Sc. BOTANY (GENERAL)(1+1+1)**

Students can apply the knowledge towards various plant diseases and their control measures. Active constituents from plant sources will lead to rapid developments in Pharmacognosy and Phytochemistry. On completion of the course, students will be able to understand the scope and importance of Plant Pathology. Genetic Engineering and artificial gene transfers are some of the topics that students may explore for development of desired crops.

# **COURSE OUTCOMES**

## **B.Sc. BOTANY (HONOURS)(CBCS)**

### **SEM-I**

#### **CC-1: PHYCOLOGY AND MICROBIOLOGY**

##### PHYCOLOGY

1. Understand the general account about algal growth, morphology, cell structure, sexual evolution along with their habitats.
2. Classify algae with salient features up to phylum and to know the diversity among Algae.
3. Understand Cyanobacterial cellular structure and heterocyst formation
4. Understand cell division, structure and sexual spore formation of Bacillariophyta
5. Know about the life histories of important algae.

##### PRACTICAL

Students will gather knowledge about reproductive structure of *Oedogonium*, *Chara*, *Ectocarpus* and about the morphological features of *Gloeotrichia*, *Volvox*, *Vaucheria*, *Coleochaete*, *Polysiphonia*, Centric and Pennate diatom, *Laminaria* and *Sargassum*

##### MICROBIOLOGY

Basic idea on discovery and types of plant Virus, structure and multiplication of virus with an example, transmission, reproduction and concept of viroid, prion.

Brief idea on discovery of Bacteria, difference of Archaea and Bacteria, characteristics of some major groups, detailed cell structure, reproduction, structure and formation of endospore.

##### PRACTICAL

aspects on preparation of Bacterial media, sub-culturing and staining.

#### **CC-2: MYCOLOGY AND PHYTO-PATHOLOGY**

##### MYCOLOGY

- 1- An introductory idea and general account of Fungi.
- 2- Classification of fungi and diagnostic characters of fungal subdivisions.
- 3- Life histories of representative fungi.
- 4- Types of mycorrhizae and their importance.
- 5- Types of lichen, their reproduction and importance.
- 6- Practical- Study of the external and internal structures of fungi; study of fungi during field work.

##### PHYTO-PATHOLOGY

- 1- Introduction to general terms and definitions relevant to Plant Pathology.
- 2- Study of the Host-Parasite interaction, and the features involved.
- 3- Techniques of Plant Disease Management.
- 4- Detailed study of some important plant diseases.
- 5- Practical- Performance of pathological processes in the lab, and study of diseased structures.

## **PRACTICAL**

Macroscopic and microscopic study of fungi.

Simple pathological processes such as media preparation, sterilization, isolation and subculturing.

Identification of pathological specimens from different diseased plant parts.

Local field trip.

## **SEM-II**

### **CC-3: ANATOMY**

Structure and composition of cell wall, cell wall thickening, structure of plasmodesmata, concept of apoplast and symplast.

Concept and types of stomata, stele, stelar evolution, primary structure of plant organs like stem, root and leaf emphasizing the differences in monocot and dicot.

Concept of normal and secondary growth in stems and roots with some examples, mechanical tissues and their distribution.

Basic idea on root apex and shoot apex, adaptive anatomical features of xerophytes and hydrophytes.

Application of anatomical knowledge in various fields like taxonomy, pharmacognosy and forensic biology.

### **PRACTICAL**

knowledge on anomalous growth by section cutting and concept of different types of stomata, cells, adaptive anatomical features from permanent slides.

### **CC-4: ARCHEGONIATES**

#### **BRYOPHYTES**

- 1- An introductory account of Bryophytes and their classification.
- 2- Life histories of some representative bryophytes.
- 3- Unique features of bryophytes and their phylogeny.
- 4- Ecological and Economic importance of bryophytes.

Practical-

study of internal and external structures of bryophytes; identification of common specimens in the field.

#### **PTERIDOPHYTES**

- 1- A general account of Pteridophytes and their classification.
- 2- Life histories of some representative pteridophytes.
- 3- Origin of pteridophyte groups as per the Telome theory.
- 4- The role of Heterospory in the development of the Seed habit.
- 5- The economic importance of pteridophytes.

Practical-

study of internal and external structures of pteridophytes; identification of specimens during excursions.

## GYMNOSPERMS

- 1- Classification of gymnosperms with diagnostic features of various divisions.
- 2- Features and evolutionary significance of Pro-gymnosperms.
- 3- Life histories of representative gymnosperms.
- 4- Economic importance of gymnosperms.

## PRACTICAL-

Macroscopic and microscopic study of internal and external structures of bryophytes, pteridophytes and gymnosperms;

Study of specimens during field work.

## SEM-III

### **CC-5: PALEOBOTANY AND PALYNOLOGY**

- 1- The Geological Time Scale with plant groups dominant in different ages.
- 2- General idea about plant fossils- their types, preservation modes, nomenclature and importance.
- 3- Study of representative fossil pteridophytes and their importance in evolution.
- 4- Study of reconstructed fossil gymnosperms.
- 5- The Indian Gondwana system- their divisions and major fossils.
- 6- Study of spores and pollen – Palynology – their classification, stratification and sculpturing.
- 7- Major fields of application of Palynology.

## PRACTICAL-

study of macroscopic and microscopic fossils and pollen.

### **CC-6: REPRODUCTIVE BIOLOGY OF ANGIOSPERMS**

## MORPHOLOGY

Inflorescence types, floral development, fruits and seeds.

## EMBRYOLOGY

1. Pre-fertilisation changes: Understand different pre-fertilization changes viz., microsporogenesis, megasporogenesis, microgametogenesis and megagametogenesis
2. Fertilisation: To know method of fertilization via pollen germination, pollen tube- growth, entry of pollen into ovule and discharge; understand double fertilization of Angiosperm
3. Post-fertilization changes : embryogenesis in *Capsella* and 3 types of endospem development.
4. Apomixis & Polyembryony: General idea about apomixes, apospory, apogamy and polyembryony, and their different types

## PRACTICAL-

Study of types of inflorescence, flowers, fruits and ovules.

### **CC-7: TAXONOMY OF ANGIOSPERMS**

Introduction on plant taxonomy, Nomenclatural rules such as rules of ICN, type concept, priority of publication etc.

Describe different classificatory systems of plants with examples of a natural and a phylogenetic classificatory system, brief idea on APG system, phenetics and cladistics.

Basic idea of Herbaria, Botanical Gardens, Keys of identification, data sources in taxonomy.

Diagnostic features, systematic position and economically important plants of some selected families such as Magnoliaceae, Asteraceae, Poaceae, Orchidaceae etc.

#### PRACTICAL

knowledge on diagnostic features of some selected families by flower dissection, spot identification of some common plants and field visit.

### **SEC-A: APPLIED PHYCOLOGY, MYCOLOGY AND MICROBIOLOGY**

#### APPLIED PHYCOLOGY

- 1- Uses of algae as food and as source of phyco-colloids and diatomite, and various biotechnological products obtained from them.

#### APPLIED MYCOLOGY

- 1- Fungi as sources of food and various useful industrial products.

#### APPLIED MICROBIOLOGY

- 1- Uses of microbes in production of useful industrial products, as biofertilizers and in mineral recovery.

## **SEM-IV**

### **CC-8: PLANT GEOGRAPHY, ECOLOGY AND EVOLUTION**

#### PLANT GEOGRAPHY

- 1- Major phytogeographical regions of India and their flora.
- 2- Endemic flora of India and the Theories of Endemism.

#### PRACTICAL-

long excursion to study a different phytogeographical region; study of local flora and submission of a report on it.

#### ECOLOGY

- 1- Preliminary ideas and fundamental ecological concepts.
- 2- Basics of Community Ecology and Plant Succession.
- 3- Plant Metallophytes and Phytoremediation.
- 4- Biodiversity and its conservation.

#### PRACTICAL-

study of vegetation by Quadrat method; measurement of dissolved oxygen and free carbon dioxide at different sources; comparison of anatomical changes in leaves due to pollution.

#### EVOLUTION

- 1- Different theories on evolution.
- 2- Brief ideas of concepts important to evolution- Selection, Speciation, Coevolution and Adaptive Radiation.
- 3- Simple idea about the phylogenetic patterns in different plant groups.

### **CC-9: ECONOMIC BOTANY**

1. Develop critical understanding on the centre of origin of cultivated crops and their importance, introduction of major plants, loss of genetic diversity through crop domestication, evolution of new varieties and importance of germplasm diversity
2. To know the origin, morphology, processing and uses of major cereals – Rice and Wheat
3. Understand the origin, morphology and uses of legumes viz., gram and mung bean, importance of legumes to man and environment
4. Understand morphology of sugarcane, products and by-products of sugarcane industry; additionally to know about morphology, propagation and uses of Potato
5. Develop concept about different spices with reference to their family and parts used
6. Know morphological feature, processing and uses of Tea
7. Knowledge of classification, extraction and uses of fat and oils. Impact of mustard, soybean, coconut oil with reference to their botanical name, family and uses. General idea about essential oil, their uses, extraction processes and comparison with fatty oils.
8. General accounts of drug yielding plants and their health hazards with special emphasis on *Cinchona*, *Digitalis*, *Papaver*, *Cannabis* and Tobacco
9. General account of timber with special reference to Sal and Teak
10. Know morphology of Cotton and Jute, extraction of fibres and their uses.

### **PRACTICAL**

1. Understand morphology and chemical nature of grain of rice and wheat
2. Develop knowledge about morphological features, fruit and seed structure of legumes and estimation of proteinaceous nature by microchemical tests
3. Detailed study of Sugarcane and potato by habit sketch and microchemical tests of cane juice and starch
4. Detection of tannin from Tea tree leaves
5. To confirm presence of fat in crushed seeds of Mustard
6. Morphological study of *Digitalis*, *Papaver* and *Cannabis*
7. Students will know about anatomical features of young stem of Sal and Teak
8. Lignin identification from transverse section of young Jute stem and tests for lignin through staining procedure
9. Local excursion will help students to gather practical knowledge about cultivation of major economically important crops and about the precaution taken in field condition.

### **CC-10: GENETICS**

Brief idea of Mendelian genetics, concept of linkage and crossing over, detection and mechanism of crossing over, basic idea on gene mapping, ISH, FISH.

Concept of Epistasis and polygenic inheritance.

Chromosomal aberration-numerical and structural,  
their types, reasons and consequences with examples.

Point mutation, types, molecular mechanism and DNA repair.

Concept of gene, overlapping gene, split gene, homoeotic gene, transposon and repetitive DNA.

#### PRACTICAL

knowledge on mitotic and meiotic Chromosome study by using root tip and flower bud. Identification of some normal and abnormal mitotic and meiotic stages studying permanent slides.

#### **SEC-B: MUSHROOM CULTURE TECHNOLOGY**

1. Gathering of knowledge about nutritional and medicinal value of edible mushrooms, different types of poisonous mushrooms.

General account on edible mushroom viz., *Volvariella*, *Pleurotus*, *Agaricus*.

2. Development of concept about cultivation methods of mushrooms in details
3. Storage procedures and nutrition values of mushrooms in terms of carbohydrate, protein, vitamin, amino acid, crude fibre contents
4. Knowledge of different types of foods prepared from mushroom along with national and regional level research centres, marketing and exporting of mushroom.

## **B.Sc. BOTANY (HONOURS)(1+1+1)**

### **PART-3**

#### **PAPER-V:**

##### **BIOCHEMISTRY**

1. Fundamentals of Biochemistry.
2. Life molecules-carbohydrates, proteins, nucleic acids.
3. Bioenergetics and enzymology.
4. Membrane signalling.
5. Phosphorylation.

##### **PHARMACOGNOSY**

1. Organolepsis.
2. Secondary metabolites.
3. Pharmacologically active substances.

##### **PLANT PHYSIOLOGY**

1. Plant-water relations and stomatal physiology.
2. Phloem transport.
3. Photosynthetic pigments, electron transport, C3, C4 and CAM pathways.
4. Respiratory and pentose phosphate pathway, fatty acid oxidation.
5. Nitrogen metabolic pathways.
6. Plant growth regulators and their physiological roles.
7. Photomorphogenetic phenomena.
8. Dormancy and germination.
9. Senescence and ageing.
10. Stress physiology.

## **PAPER-VI:**

### **CELL BIOLOGY**

Concept of origin of first cell, Eukaryotic cell, Organellar DNA.

Basic concepts on the structure and composition of Nucleus, Nucleolus and Chromosome emphasizing the chromosome packaging, karyotype.

Idea of Cell cycle mechanism, its regulation with an example of Yeast, checkpoints, MPF and apoptosis.

### **PLANT BREEDING AND BIOMETRY**

Methods of plant breeding and back cross, concepts of heterosis, hybrid seed production, male sterility and molecular breeding.

Methods of frequency distribution and random sampling, concepts of central tendency, test of significance, rules of probability and measurement of gene frequency.

### **PLANT BIOTECHNOLOGY**

Basic introduction on totipotency, tissue culture media, process of callus culture, Micropropagation, Haploid Culture and Protoplast culture.

Brief concept of gene transfer, emphasizing *Agrobacterium* mediated gene transfer, reporter gene and transgenic plants.

### **GENETICS AND MOLECULAR BIOLOGY**

Concept of linkage and crossing over, detection and mechanism of crossing over, basic idea on gene mapping, ISH, FISH.

Concept of Epistasis and polygenic inheritance.

Chromosomal aberration-numerical and structural,  
their types, reasons and consequences with examples.

Point mutation, types, molecular mechanism and DNA repair.

Concept of gene, overlapping gene, split gene, homoeotic gene, transposon and repetitive DNA.

Concept of genetic code and mechanism of protein synthesis.

Brief idea on methods of gene regulation emphasizing Lac-operon.

Basic idea of Recombinant DNA technology with a concepts of Restriction enzymes, Vector, Marker gene, cloning steps, PCR, genomic DNA and cDNA library.

Brief idea of Bioinformatics including genomics and proteomics.

## **PAPER-VII: PRACTICAL**

### **PLANT BIOCHEMISTRY**

Qualitative tests for organic acids, carbohydrates, proteins and minerals.

Quantitative tests for nitrogen, glucose, acidity, catalase, urease, protein.

### **PLANT PHYSIOLOGY**

Experiments on transpiration, photosynthetic rate determination, chromatography of photosynthetic pigments, respiration rates, osmotic pressure in tissues, effect of temperature on water absorption, and comparative imbibition in different plant tissues.

### **ANATOMY**

Study of microscopic anatomical structures, anomalous secondary growth in stems and roots, and adaptive anatomical features in hydrophytes and xerophytes.

### **PHARMACOGNOSY**

Chemical tests for tannins and alkaloids, microscopic study of powdered medicinal plants, histochemical tests for pharmacological substances in medicinal plants.

## **PAPER-VIII: PRACTICAL**

### **CELL BIOLOGY AND GENETICS**

Practical knowledge on chromosome preparation including pretreatment, fixation, staining and mounting for study of mitosis using root tips of *Allium cepa*, *Aloe vera* and *Lens esculenta*.

Study of Meiosis using flower buds of *Allium cepa* and *Setcreasea* sp.

Identification of some normal and abnormal mitotic and meiotic stages from permanent slides.

### **BIOMETRY**

Method of determination of goodness of fit in normal and modified monohybrid and dihybrid ratios using chi-square methods and Univariate analysis of Statistical data.

### **MICROBIOLOGY**

Practical knowledge on preparation of Bacterial media, sub-culturing and process of normal staining and gram staining of bacterial cell.

### **PLANT PATHOLOGY**

Practical knowledge on preparation of fungal media, isolation of pathogen, inoculation of pathogen and identification of some selected disease and spore of *Puccinia*.

## **B.Sc. BOTANY (GENERAL)(CBCS)**

### **SEM-I: PLANT DIVERSITY-I**

#### **PHYCOLOGY**

General account of algae, their classification and role in the environment, agriculture, biotechnology and industry.

Know diagnostic characters of Cyanophyceae, Rhodophyceae, Chlorophyceae, Charophyceae and Phaeophyceae with examples along with that life history of *Chlamydomonas*, *Chara* and *Ectocarpus*

#### **MYCOLOGY**

Diagnostic characters of fungal subdivisions, common fungi, their economic importance and types.

#### **PHYTOPATHOLOGY**

Fundamental concepts of phytopathology, and detailed study of some important plant diseases of potato, rice and jute.

#### **BRYOPHYTES**

Unique features of bryophytes, features of the different classes, their ecological and economic importance, and detailed life histories of some common bryophytes.

#### **ANATOMY**

Concept and types of stomata, stele, stelar evolution, primary structure of plant organs like stem, root and leaf emphasizing the differences in monocot and dicot.

Concept of normal and secondary growth in stems with the examples of *Tecoma* and *Dracaena*.

#### **PRACTICAL**

Workout of common algae and fungi,  
Sectioning and staining of plant parts,  
Spot identification of algal and fungal structures, pathological specimens.

Local excursion.

### **SEM-II: PLANT DIVERSITY-II**

#### **PTERIDOPHYTES**

Diagnostic features of different groups, their economic importance, and life histories of some common pteridophytes.

#### **GYMNOSPERMS**

Develop concept about progymnosperms, and diagnostic features of Cycadophyta, Coniferophyta and Gnetophyta.

Know life history of *Cycas* and *Pinus*. Reconstructed structure of *Williamsonia*  
Economic importance of gymnosperms.

## **PALEOBOTANY**

Fundamental concepts of Paleobotany and its importance, the geological time scale, concepts of Palynology and its applications.

## **MORPHOLOGY**

Fundamentals of different types of Inflorescences, Flower, Fruits and seeds.

## **TAXONOMY**

Introduction on plant taxonomy, and Classificatory system of Angiosperms.

Diagnostic features of some selected families such as Magnoliaceae, Asteraceae, Poaceae, Orchidaceae etc.

## **PRACTICAL**

Knowledge on diagnostic features of some selected families by flower dissection, spot identification of some common plants.

Field excursion.

## **SEM-III**

### **CELL BIOLOGY AND GENETICS**

Basic concepts on the structure and functions of Nucleus, Nucleolus and Chromosome emphasizing the chromosome packaging.

Chromosomal aberration-numerical and structural,

their types, reasons and importance with examples.

Point mutation, types, molecular mechanism and DNA repair.

Concept of genetic code and mechanism of protein synthesis.

Brief idea on Linkage group, Genetic map, Split gene and Transposons.

### **MICROBIOLOGY**

Basic knowledge of Discovery, structure, Replication and Economic importance of Virus and Bacteria, Concepts of T-phage and TMV Virus.

### **PRACTICAL**

Knowledge on chromosome study using onion root tip and bacterial staining.

Identification of different divisional stages and different forms of bacteria from permanent slides.

## **SEM-IV**

### **PLANT PHYSIOLOGY AND METABOLISM**

1. Proteins: Structure of protein and DNA, idea about different types of RNA, classification of enzyme and mechanism of its action.
2. Transport in plants: Brief account on phloem transport, ascent of sap, xylem cavitation and source-sink transport
3. Transpiration: Significance of transpiration and stomatal movement
4. Photosynthesis: General account on pigments, action spectra, enhancement effect, electron transport system, photophosphorylation, C<sub>3</sub> and C<sub>4</sub> photosynthesis, CAM plants and its significance
5. Respiration: Understand the reactions Glycolysis, Krebs cycle, ETS and oxidative phosphorylation along with significance of glycolysis and krebs cycle
6. Nitrogen metabolism: To develop concept of biological N<sub>2</sub> fixation, reaction of amino acid synthesis
7. Plant Growth regulators: Know physiological roles of Auxin, Gibberellin, Cytokinin, Ethylene and ABA
8. Photoperiodism: Understand different types of photoperiodic plants and role of phytochrome, GA in flowering and Vernalization
9. Senescence: development of brief concept about senescence.

### **PRACTICAL**

1. To understand mechanism of Plasmolysis.
2. To develop concept about transpiration rate per unit leaf area
3. Know imbibition of water using proteinaceous and fatty dry seeds.
4. Understand mechanism of photosynthesis by O<sub>2</sub> evolution.
5. Understand mechanism of aerobic respiration by measuring rate of CO<sub>2</sub> evolution.

## **B.Sc. PART -3 (GENERAL) (1+1+1)**

### **PAPER – IVA ; MODULE VII**

1. Brief idea about sources, production and application of biofertilizer
2. Food value of mushroom and cultivation process of *Pleurotus*
3. General account on quarantine, biological and chemical method of plant disease control
4. Understand plant breeding programme, mass and pure line selection, heterosis and hybrid seed production
5. To know measures of central tendency and goodness of fit
6. Development of concept about plant tissue culture, callus culture and plant regeneration through various ways of tissue culture techniques
7. General account on recombinant DNA technology, cloning and transgenic plants
8. Understand scope and importance of pharmacognosy, secondary metabolites and organoleptic evaluation of drugs.

### **PRACTICAL**

1. To generate concept about laboratory instruments
2. To learn sterilization technique by using autoclave
3. For preparation of culture media of tissue culture method
4. Understand bacterial structure and their cellular details by staining method
5. To have an idea about different medicinally important plants along with their used parts
6. Practical application of Chi-square test for determination of goodness of fit
7. Visit to medicinal plant garden that will enrich student's knowledge in the field of pharmacognosy.

\*\*\*\*\*

# **COURSE OUTCOMES**

## **B. SC. BOTANY (HONOURS) (CBCS)**

### **SEM-V**

#### **CC-11**

##### **CELL AND MOLECULAR BIOLOGY**

1. Brief knowledge on Nucleic acid evolution, endosymbiotic theory, concept of RNA world, ribozyme, organellar, organellar DNA and types of different types of RNA.
2. Concept of ultrastructure of nucleus, nucleolus, chromatin structure and DNA packaging in eukaryotic chromosome and centromere.
3. Brief idea on cell cycle and its regulation, concept of microtubules and apoptosis.
4. Concept of DNA replication and protein synthesis, gene regulation emphasizing on lac-operon, genetic code.
5. Brief idea on recombinant DNA technology, PCR, genomic and cDNA library. Concept of cancer.

Practical-

Knowledge on plant cell structure, size and method of DNA and RNA staining.

#### **CC-12**

##### **BIOCHEMISTRY**

1. Students will be able to understand the function of cells at molecular level viz., structure and function of DNA and RNA.
2. The students will acquire basic knowledge of the properties and metabolism of carbohydrates protein and lipids in living system.
3. The students will know the fundamental biochemical principles of enzymes, such as the structure and function of enzymatic process in living system.
4. In addition this course will help to gather knowledge about membrane chemistry of plants and transportation through it.

Practical-

It will help to know the detailed method of detection procedures of organic acids, protein and carbohydrate from plant and laboratory samples.

Students will be able to identify nature of monosaccharides and disaccharides from sugar samples.

Qualitative mode of practical will enrich student's knowledge about the detection process of Ca, Mg, Fe and S from plant ash.

Quantitative mode of biochemistry practical will help students to learn about preparation of different solutions and buffers.

It will help in estimation of amino-nitrogen, glucose, titrable acidity, catalase, urease and protein by following standard protocols.

#### **DSE-A**

## INDUSTRIAL AND ENVIRONMENTAL MICROBIOLOGY

1. A general idea about use of microbes in industry and improving the environment.
2. Different types of fermenters and fermentation processes.
3. Different techniques of use of microbes in industrial production, with specific examples.
4. Immobilized microbial enzymes and their uses.
5. Microbes in the air, water and soil, and their isolation.
6. Role of microbes in water treatment, coliforms, determination of BOD, COD.
7. Microbes in agriculture and bioremediation.

Practical-

Instruments in the microbiology laboratory, sterilization techniques and culture media.

## DSE-B

### PLANT BIOTECHNOLOGY

1. Basic concepts of plant tissue culture.
2. Principles of callus and suspension culture.
3. Principles of organogenesis and somatic embryogenesis.
4. Techniques of anther and pollen culture.
5. Protoplast culture and its significance.
6. Concepts of gene transfer methods, achievements in crop biotechnology, environment and industry.

Practicals-

Basic equipments and techniques in plant tissue culture and sterilization.

## SEM-VI

### CC-13- PLANT PHYSIOLOGY

1. Water Potential and Stomatal Physiology in plant-water relations, factors affecting stomatal relations.
2. Macro- and micro-nutrients, their roles and deficiency symptoms.
3. Mechanisms of phloem loading and unloading of sugars in plants.
4. Different plant growth regulators, their roles, chemical nature. Biosynthesis and bioassay of auxin.
5. Concept of photomorphogenesis, perception of photoperiodism and photoreceptors, hormones in photomorphogenetic phenomena, concept of biological clocks and rhythm.
6. Mechanisms of seed dormancy and germination.
7. Physiological mechanisms of seed dormancy and germination.

Practical-

Experiments on transpiration, evaporation, absorption, imbibition and osmotic pressure.  
Experiments on seed germination and IAA bioassay.

## CC-14

### PLANT METABOLISM

1. Students will acquire knowledge on the metabolic pathways of plants.
2. The student will gather knowledge about the structure of photosynthetic pigments, mechanism of photosynthesis, photorespiration and about different pathways of dark cycle viz., Calvin cycle, C4 cycle.
3. They will gain knowledge about respiration and their significance; respiratory electron transport chain and their role in ATP production.
4. Students will acquire knowledge on role of micronutrients in plant growth and development and will understand the basic mechanism of nitrogen fixation and amino acid biosynthesis processes.
5. Students will be able to understand the process of lipid metabolism, different ways of lipid oxidation and their impact in lipid mobilization during germination of seed and seedling growth.
6. It will help students to understand the mechanism of signal transduction, role of second messenger, G protein and different MAP-kinase cascades.

### **Practical**

Understand chromatographic methods and its principles. It will help to isolate plastidial pigments from plants.

Students will know the process of total chlorophyll estimation. This practical will help to gather knowledge about impact of bicarbonate solutions on oxygen evolution during photosynthesis and it will help to identify toxic concentrations of bicarbonate.

Knowledge about oxygen uptake by respiring tissue.

It will help to determine RQ of germinating seeds and to identify viable seeds by following TTC method.

### DSE-A

#### MEDICINAL AND ETHNOBOTANY

1. Idea on history, scope and importance of Medicinal plant, brief knowledge on ayurveda, siddha, unani and polyherbal formulations.
2. Concept of pharmacognosy, crude drug evaluation, classification and major pharmacological group of plant drugs.
3. Knowledge on Secondary metabolites, interrelationship with basic metabolic pathways, and major types of secondary metabolites.
4. Knowledge of some pharmacologically active compounds like tannin, resin, alkaloid, phenols, their sources and uses.
5. Concept of ethnobotany, method of study, application and Indian scenario

### **Practical**

Knowledge on Chemical test, powder microscopy and histochemical test of some common drugs.

## DSE-B

### NATURAL RESOURCE MANAGEMENT

1. Types of natural resources.
2. Concepts of sustainable utilization of resources.
3. Utilization of land resources, soil degradation and management.
4. Threats to water sources and their management.
5. Management strategies for threats to biodiversity, Intellectual Property Rights.
6. Significance and management of forests and forest products.
7. Types of energy sources.
8. Current techniques of resource management, carbon footprint, Environmental Impact Assessment and geographic information systems.
9. Resource Management and conservation efforts.

#### Practicals-

Estimation of domestic solid waste generation, total dissolved solids in water, foliar dust deposits. Determination of soil constituents and forest cover.

## **B. SC. BOTANY (GENERAL) (CBCS)**

### **SEM-V**

## DSE-A

### PHYTOCHEMISTRY AND MEDICINAL BOTANY

1. To know about history and relevance of herbal drugs in Indian systems of medicine.
2. To understand the techniques for drug evaluation, phytochemical investigations, standardization and of herbal drugs
3. To know about the major and minor ethnic groups or Tribals of India and their life styles in terms of their familiar plants along with their uses.
4. To get awareness on the conservation practices of medicinal plants.

#### **Practical**

It will help to develop knowledge about solutions, buffers and of several laboratory instruments viz., autoclave, incubator, centrifuge, analytical balance, pH meter, colorimeter, waterbath, distillation plant and laminar air flow.

It will help in detection of protein, carbohydrate – the reducing and non reducing sugars.

It will provide information about detection tests of tannin and alkaloid from plant sample.

Students will know about different medicinal plants and will be able recognize them.

## **SEM VI**

### **DSE-B**

#### **ECONOMIC BOTANY**

1. Concept of origin of Cultivated plants, importance, Vavilov's work
2. Origin, morphology and uses of Rice
3. General account of Legumes emphasizing *Vigna*
4. Idea of morphology, processing and uses of Tea
5. Study of some economically important plant focussing scientific name, family, useful parts and uses.

Practical-

Knowledge on rice, jute and tea through herbarium sheets, cultivation practices in field and some local economically important plants.

\*\*\*\*\*

### Program Specific Outcome for B Sc Chemistry Honours

On graduating from the B Sc Chemistry Honours Program (1+1+1 or CBCS curricula) students will be able to appreciate the integral role of Chemistry in our life. A more detailed outcome is given below.

Program Outcomes	The Students would be able to...
<b>PO-1</b>	obtain a firm foundation and in-depth knowledge of concepts, theories and principles of Chemistry
<b>PO-2</b>	use critical thinking and problem- solving skills in all the specific areas of Chemistry
<b>PO-3</b>	design, experiment, analyse data and interpret results with a responsible and ethical scientific temper
<b>PO-4</b>	effectively work in teams, in class or laboratory, with good communication skills, to transmit clear and concise information
<b>PO-5</b>	use modern instrumentation and computers for analysis and computation
<b>PO-6</b>	appreciate the safety and chemical hygiene regulations and practices in laboratory and industry, as the basis for addressing the environmental issues in our society
<b>PO-7</b>	confidently compete in entry level examinations for higher studies or for a career in diverse areas
<b>PO-8</b>	acquire an understanding of the standards of academic discipline and integrity
<b>PO-9</b>	apply the methods of enquiry as professionals or studies in chemistry or other related fields
<b>PO-10</b>	explore new areas of research in chemistry as well as allied science and technology areas

### Course Specific Outcome for B Sc Chemistry Honours (1+1+1)

After successful completion of the BSc Chemistry Honours CEMA Program, the students will have an in-depth knowledge of the following specialised areas of the subject. They will be aware of their applications in research and industry, and be ready to put the knowledge to test in their careers and vocations. The specific knowledge areas are outlined below in the column on the right.

Papers	Learning Outcomes	Specific Knowledge Domains Addressed and Achieved by the Student
<b>Paper 1A</b>	LO-1	Stereochemistry of Organic Molecules
	LO-2	Theories of Bonding and Physical Structure
	LO-3	General Understanding of Reaction Mechanisms
	LO-4	Nucleophilic Substitution Reactions
<b>Paper 1B</b>	LO-1	Kinetic Theory and The Gaseous State
	LO-2	Basic Concepts of Thermodynamics and Thermochemistry
	LO-3	Second Law of Thermodynamics, and Concept of Entropy
	LO-4	Chemical Kinetics
<b>Paper 2A</b>	LO-1	Radioactivity and Atomic Structure
	LO-2	Chemical Periodicity
	LO-3	Chemical Bonding and Structure
	LO-4	Acid-Base Reactions
<b>Paper 2B</b>	LO-1	Qualitative Analysis of Inorganic Mixtures
<b>Paper 3A</b>	LO-1	Electrophilic and Nucleophilic Addition Reactions
	LO-2	Elimination Reactions and Aromatic Substitution
	LO-3	Nitrogen Compounds and Organometallics
	LO-4	Rearrangement Reactions
<b>Paper 3B</b>	LO-1	Thermodynamics and Equilibrium
	LO-2	Liquid State and Viscosity of Fluids
	LO-3	Basic Ideas of Quantum Chemistry
	LO-4	Electrochemistry
<b>Paper 4A</b>	LO-1	Chemical Periodicity and General Property Trends of s- and p-block Elements
	LO-2	Molecular Orbital Theory, Hydrogen Bonding and Metallic Bonding
	LO-3	Chemistry of s- and p- block Elements
	LO-4	Precipitation and Redox Reactions
<b>Paper 4B</b>	LO-1	Analytical Estimations- Iodometry, Permanganometry, Dichromatometry and Complexometry
	LO-2	Instrumental Estimations-Spectrophotometry, Conductometry, Potentiometry, pHmetry

<b>Paper 5</b>	LO-1	Chemistry of Coordination Compounds
	LO-2	Chemistry of d- and f- block Elements
	LO-3	Organometallic Compounds
	LO-4	Major Aspects of Bio-Inorganic Chemistry
	LO-5	Electrochemical and Spectral analysis and Analytical Separations
	LO-6	Statistical Methods in Chemical Analysis and Environmental Analysis
	LO-7	Gravimetric and Titrimetric Methods of Analysis
	LO-8	Thermodynamics of Dissolution
<b>Paper 6A</b>	LO-1	Carbanion Chemistry and Stereochemistry of Cyclic Compounds
	LO-2	UV, IR and NMR Spectroscopy
	LO-3	Synthetic Strategies and Asymmetric Synthesis
	LO-4	Carbohydrate Chemistry
	LO-5	Carbocycles and Heterocycles
	LO-6	Amino Acids, Peptides and Nucleic Acids
<b>Paper 6B</b>	LO-1	Spectroscopic Analysis of Organic Compounds
<b>Paper 7A</b>	LO-1	Properties of Solids, Interfaces and Dielectrics
	LO-2	Quantum Chemistry- SH-Oscillator, Schrodinger Equation
	LO-3	Phase Equilibrium and Colligative Properties
	LO-4	Statistical Thermodynamics and the Third Law
	LO-5	Kinetics and Photochemistry
	LO-6	Rotational and Vibrational Spectroscopy and Raman Effect
<b>Paper 7B</b>	LO-1	Non-Instrumental Physical Chemistry Experiments
<b>Paper 8A</b>	LO-1	Qualitative Analysis of Single solid Organic Compounds
	LO-2	Organic Preparations
<b>Paper 8B</b>	LO-1	Instrumental Physical Chemistry Experiments

Course Specific Outcomes for BSc Chemistry Honours (CBCS)		
<p>After successful completion of the BSc Chemistry Honours CEMA (CBCS) Program, the students will have an in-depth knowledge of the following areas of the subject. They will be aware of their applications in research and industry, and be ready to put the knowledge to test in their careers and vocations. The specific domains are outlined below in the column on the right.</p>		
Semester and Papers	Learning Outcomes	Knowledge Domains Addressed and Attained
Semester I Paper 1 CC1-1	LO-1	Extranuclear Structure of Atom- Quantum Numbers, Scrodinger's Equation, Radial & Angular Distribution
	LO-2	Extranuclear Structure of Atom- Principles, Exchange Energy, Term Symbols
	LO-3	Acid-Base Reactions- Concepts, Thermodynamic Parameters
	LO-4	Acid-Base Reactions- HSAB Principle, Equilibria, Neutralization and Indicators
	LO-5	Redox Reactions- Equations, Potential, Titrations and Indicators
	LO-6	Redox Reactions- Potential Diagrams and Applications
	LO-7	Redox Reactions- Electroanalytical Methods, Applications of Solubility Product and Common Ion Effect
	LO-8	VB Theory : Hybridisation, Resonance, DBE and s-cis and s-trans Geometry
	LO-9	Electronic Displacements : Inductive Effect, Mesomeric Effect, Resonance Energy, Bond Polarizability, Electromeric, Field and Steric Effects
	LO-10	MO theory : Concept of HOMO, LUMO and SOMO; Sketch and Energy Levels of $\pi$ MOs ; Hückel's Rules for Aromaticity , Frost Diagram
	LO-11	Physical properties : BDE and Bond Energy, Distances and Angles, Bond Angle Strain, Polarity and Dipole Moments
	LO-12	Ionic, Radical and Pericyclic Reactions; Addition, Elimination and Substitution Reactions, Bond Cleavage, Electrophiles and Nucleophiles (elementary idea)
	LO-13	Quantitative Acid-Base Titrations and Redox Titrations in the Laboratory
	LO-14	Organic Compounds Separation Based upon Solubility and Common Reagents
Semester I Paper 2 CC1-2	LO-1	Stereochemistry-I: Geometry, Chirality, Symmetry, Configuration, Optical activity of various organic compds.
	LO-2	Reactive Intermediates of Organic Reactions and their Electrophilic/Nucleophilic Behavior (elementary idea)
	LO-3	Kinetic Theory and Gaseous state: Derivation of Equation for Molecular Distribution with Speed, Equation of States for Real Gas (with reasons for Deviation), Introduction of Heat capacity from Principle of Equipartition of Energy
	LO-4	Transport processes: Understanding of mobility of fluid molecule in Different Conditions: Introduction of Viscosity and

		Diffusion
	LO-5	Chemical kinetics: Concept of Progress of a reaction with Time; Understanding of Rate, Order and Molecularity of a Reaction. Determination of Rate Constant of a Reaction and Understanding of Temperature Dependence of Rate Constant.
	LO-6	Determination of Boiling Point of Common Organic Liquid Compounds
	LO-7	Study of Kinetics and Determination of Rate Constant of Decomposition of $\text{H}_2\text{O}_2$
	LO-8	Study of Kinetics and Determination of Rate Constant for Acid-catalyzed Hydrolysis of Methyl Acetate
	LO-9	Study of Viscosity and Determination of Viscosity Coefficient of Unknown Liquid with Respect to Water
	LO-10	Understanding of Concentration Dependence of Viscosity.
	LO-11	Understanding of Solubility of Sparingly Soluble Salt in Water, and Effect of Common ion on solubility
<b>Semester II</b> Paper 3 CC2-3	LO-1	Stereochemistry-II: Concept of Stereoisomerism, Pro-Stereoisomerism, Conformational Analysis
	LO-2	Reaction mechanism-III: Organic Reaction Kinetics, Thermodynamics, Tautomerism, Substitution and Elimination Reactions
	LO-3	Organic Compounds Preparation, Purification and Melting Point Determination
<b>Semester II</b> Paper 4 CC2-4	LO-1	Ionic Bonding- Characteristics, Size Effects, Crystal Packing
	LO-2	Ionic Bonding- Born-Lande Equation, Born Haber Cycle, Energetics
	LO-3	Covalent Bond-Polarization, Formal Charge, VBT
	LO-4	Covalent Bond-Hybridisation, VSEPR Theory, Molecular Shapes
	LO-5	MOT-LCAO, MO Diagrams of Homonuclear and Heteronuclear Species
	LO-6	Metallic Bond, Semiconductors and Insulators, Weak Chemical Forces
	LO-7	Nuclear Stability and Forces ( Theories and Models), Artificial Radioactivity
	LO-8	Fission, Fusion, Spallation, Nuclear Energy, Radiochemical Methods, Hazards and Safety Measures
	LO-9	Iodo/i- metric Titrations, Estimation of Metal Content in Select Samples
<b>Semester III</b> Paper 5 CC3-5	LO-1	Chemical Thermodynamics I: Introduction of Systems, Different Thermodynamic Functions (State/Path) , Properties (Intensive/Extensive), Parameters (Internal Energy, Enthalpy), Introduction of 1 <sup>st</sup> Law: Mathematical relation of Heat and Work, Determination of Molar Heat capacities ( $C_p$ , $C_v$ )
	LO-2	Understanding of 2 <sup>nd</sup> Law of Thermodynamics. Introduction of Entropy: Degree of Disorderliness of a System, Determination of Functions (Helmholtz free Energy/Gibbs free Energy) to Understand the Direction/ Spontaneity of Reaction

	LO-3	Determination of Different Thermodynamic Parameters for Open System: Introduction of Chemical Potential
	LO-4	Understanding of Chemical Equilibrium, Determination of Equilibrium Constant and its Dependence on Parameters
	LO-5	Understanding of Conductance of Strong and Weak Electrolytes, Dependence of Conductance on Concentration, Ionic Mobility, Understanding of Hydrolysis of Weak electrolytes, Determination of Dissociation Constant, Salt Hydrolysis, Buffers and pH. Construction of Cell, Understanding of Electromotive Force Determination of Redox Potential for Different Systems
	LO-6	Conductometric Titrations of Acid vs Strong Base, Determination of Strength of Acid, Base, Mixture of acids
	LO-7	Study of Saponification Reaction Conductometrically, Determination of Rate Constant for Hydrolysis of Ester Using Base as Catalyst
	LO-8	Verification of Ostwald's Dilution Law and Determination of $K_a$ of Weak Acid, Determination of Dissociation Constant for a Weak Acid
	LO-9	Potentiometric Titration of Mohr's Salt Solution Against Standard $K_2Cr_2O_7$ and $KMnO_4$ Solution, Determination of Standard Reduction Potential Value for $Fe^{3+}/Fe^{2+}$ System
	LO-10	Determination of $K_{sp}$ for AgCl by Potentiometric Titration of $AgNO_3$ Solution Against Standard KCl Solution, Understanding of Solubility Product for a Sparingly Soluble Salt
	LO-11	Determination of Heat of Neutralization of a Strong Acid by a Strong Base, Understanding of Enthalpy Change for a Acid-Base Titration and Determination of Heat of Neutralisation
<b>Semester III</b> Paper 6 CC3-6	LO-1	Modern Periodic Table, Radii, IP, EA, Electronegativity and Their Group Trends,
	LO-2	Secondary Periodicity, Relativistic and Inert Pair Effects
	LO-3	Chemistry of s- block Elements, Structure, Bonding, Preparation and Properties of Typical Compounds
	LO-4	Chemistry of p- block Elements, Structure, Bonding, Preparation and Properties of Typical Compounds
	LO-5	Noble Gases- Inertness, Occurrence, Uses, Compounds, Bonding and Structure (VSEPR)
	LO-6	Inorganic Polymers-Types, Syntheses, Structure and Applications
	LO-7	Coordinate Compounds, Werner's Theory, IUPAC Nomenclature, Isomerism
	LO-8	Complexometric Titrations of Cations, Hardness of Water in Laboratory
	LO-9	Paper Chromatographic Separation of Metal Ions in Laboratory
<b>Semester III</b> Paper 7 CC3-7	LO-1	Chemistry of alkenes and alkynes: Addition to $C=C$ and $C\equiv C$ Bonds
	LO-2	Aromatic Substitution: Electrophilic and Nucleophilic

		Aromatic Substitution reaction.
	LO-3	Carbonyl and Related Compounds: Addition to C=O and $\alpha,\beta$ -Unsaturated Carbonyl System
	LO-4	Organometallics reagents: Preparation and Reactions of Grignard Reagents, Organolithiums, Gilman Cuprates, Organocopper Reagents; Concept of Umpolung
	LO-5	Identification of Pure Solid & Liquid Organic Compounds; Quantitative Estimations of Organic Compounds in Laboratory
<b>Semester III</b> Paper 8 SEC-A2	LO-1	Carbohydrates & Proteins: Biological importance, Metabolism, Isolation and Characterization, $\alpha$ -helix and $\beta$ -pleated Sheets, Denaturation of Proteins
	LO-2	Enzymes: Nomenclature, Characteristics, Active Site, Mechanism of Action, Stereospecificity, Coenzymes and Cofactors, Enzyme Inhibitors
	LO-3	Lipids: Classification, Biological Importance, Lipid membrane, Liposomes and Their Biological Functions
	LO-4	Lipoproteins: Biochemistry of Peptide Hormones, DNA and RNA Structure, Genetic Code, DNA and RNA- Replication, Transcription and Translation, Introduction to Gene Therapy
	LO-5	Diagnostic Approach of Blood/Urine Analysis: <i>Blood</i> : Collection and Preservation, Anaemia, Blood Sugar, Urea, Creatinine, Cholesterol and Bilirubin <i>Urine</i> : Collection and Preservation, Normal and Pathological Urine.
	LO-6	Hands On Practical: Identification of Carbohydrates, Proteins & Lipids, Determination of Saponification Number of Oil, Cholesterol, Nucleic Acids
<b>Semester IV</b> Paper 9 CC4-8	LO-1	Aliphatic & Aromatic Amines, Nitro Compounds, Alkyl nitrile, Isonitrile, Diazonium Salts and Their Related Compounds
	LO-2	Aliphatic and Aromatic Rearrangement Reactions
	LO-3	Retrosynthetic Analysis, Strategy of Ring Synthesis, Asymmetric Synthesis
	LO-4	Spectroscopy (UV, IR, NMR)
	LO-5	Qualitative Analysis of Single Solid Organic Compounds
	LO-6	Preparation, Purification and Melting Point Determination of a Given Organic Compound
<b>Semester IV</b> Paper 10 CC4-9	LO-1	Concepts of Colligative Properties of Ideal Solutions, Raoult's Law, Deviation from Ideal Behaviour Concept of Phase, Component, Degrees of Freedom, Derivation of Mathematical Formula for Determining Different Thermodynamic Parameters for Multicomponent System
	LO-2	Foundation of Quantum Mechanics: Introduction, The Fallacy of Classical Mechanics Defining a System Through the Introduction of Wave Function Determination of Parameters Regarding a System by introduction of Operators. Setting of Schrodinger Equation for Particle In a Box and Determination of Energy for Different States

	LO-3	Crystal Structure, Idea of Structure of Solids, Planes, Angles for Crystals, Various Lattice Structures Determination of Heat Capacity of Solids
	LO-4	Kinetic Study of Inversion of Cane Sugar using a Polarimeter: Understanding of Polarisation of light, Plane Polarised Light, Inversion of Sugar, Determination of Rate Constant for Inversion of Cane Sugar.
	LO-5	Study of Phase Diagram of Phenol-Water system: Determination of the Critical Solution Temperature
	LO-6	Determination of Partition Coefficient for the Distribution of $I_2$ Between Water and $CCl_4$ : Understanding of Nernst Distribution Law, Determination of Distribution Coefficient
	LO-7	Determination of pH of Unknown Solution (buffer) by Colour Matching Method: Understanding Dissociation of Indicators and Production of Colour Depending on pH
	LO-8	pH-metric Titration of Acid (mono- and di-basic) Against Strong Base: Determination of $pK_a$ and Dissociation Constant ( $K_a$ ) for Mono and Di-basic Acid
	LO-9	pH-metric Titration of a Tribasic Acid Against Strong Base: Determination of $pK_a$ and Dissociation Constant ( $K_a$ ) for Tribasic Acid
<b>Semester IV</b> Paper 11 CC4-10	LO-1	VBT of Coordination Compounds, CFT, CFSE, Jahn-Teller Distortion
	LO-2	MOT of Coordination Compounds, Magnetism and Colour
	LO-3	L-S Coupling, Orgel Diagrams, CT-Spectra, Selection Rules, Spectrochemical Series
	LO-4	Comparative Study of 3d-, 4d-, 5d- Elements
	LO-5	Comparative Study of Lanthanoids and Actinoids, Lanthanide Contraction, Ion-Exchange Separation for Lanthanoids
	LO-6	Inorganic Reaction Mechanisms, Trans Effect- Theory and Application
	LO-7	Thermodynamic and Kinetic Stability in Complexes, Kinetics and Reaction Rates
	LO-8	Inorganic Preparations of Coordination Compounds in Laboratory
	LO-9	Spectrophotometric Techniques of Measuring $10Dq$ and $\lambda_{max}$ of Complexes
<b>Semester IV</b> Paper 12 SEC-B3	LO-1	Drug Discovery, Design, Development, Retrosynthetic Approach
	LO-2	Synthesis of Analgesics, Antipyretics and Anti-inflammatory Agents
	LO-3	Synthesis of Antibiotics, Antifungals, Antivirals
	LO-4	Synthesis of CNS Agents, Cardiovascular, Anti-Leprosy and HIV Drugs
	LO-5	Fermentation Process - Applications in Commercial Productions of Vitamins, Antibiotics and Industrial Raw Material

<b>Program Specific Outcome of BSc Chemistry General</b>
On graduating from the B Sc Chemistry General Program (1+1+1 or CBCS curricula) students will be able to appreciate the integral role of Chemistry in our life, some details of which are given below.
The Students would be able to...
<ul style="list-style-type: none"><li>• obtain a firm foundation and in-depth knowledge of concepts, theories and principles of Chemistry</li></ul>
<ul style="list-style-type: none"><li>• learn critical thinking and problem- solving skills and apply the wherever required</li></ul>
<ul style="list-style-type: none"><li>• develop a responsible and ethical scientific temper for team work</li></ul>
<ul style="list-style-type: none"><li>• develop good communication skills, to transmit clear and concise information whenever necessary</li></ul>
<ul style="list-style-type: none"><li>• follow safety and chemical hygiene regulations and practices in laboratory and industry,with environmental awareness</li></ul>
<ul style="list-style-type: none"><li>• confidently compete in entry level examinations for higher studies or for a career in diverse areas</li></ul>
<ul style="list-style-type: none"><li>• acquire an understanding of the standards of academic discipline and integrity</li></ul>

Course Specific Outcomes for BSc Chemistry General (1+1+1)		
<p>After successful completion of the BSc Chemistry General CEMG Program, the students will have an in-depth knowledge of the following areas of the subject. They will be aware of their applications in research and industry, and be ready to put the knowledge to test in their careers and vocations. The specific domains are outlined below in the column on the right.</p>		
Papers	Learning Outcomes	Knowledge Domains Addressed
<b>Paper 1</b>	LO-1	Radioactivity and Nuclear Structure, Extranuclear Atomic Structure, Chemical Periodicity
	LO-2	The Principles of Organic Qualitative Analysis
	LO-3	Electronic Effects, Stereochemistry, Aliphatic and Aromatic Hydrocarbons
	LO-4	Aldehydes and Ketones, Alkyl and Aryl Halides
	LO-5	Ionic, Covalent and Coordinate Bonding, Basic Coordination Chemistry
	LO-6	Comparative Study of p-block Elements
	LO-7	Carboxylic Acids and Phenols, Organometallic Compounds, Organic Compounds Containing Nitrogen
	LO-8	Carbohydrates, Amino Acid and Proteins
<b>Paper 2</b>	LO-1	The Gaseous State and The Liquid State
	LO-2	Chemical Kinetics and Catalysis
	LO-3	Principles of Qualitative Inorganic Analysis
	LO-4	Comparative Study of s-block Elements, Metallurgy and Related Processes
	LO-5	Thermodynamics- Basic Concepts, First and Second Laws
	LO-6	Chemical Equilibrium and Colloids
	LO-7	Acids, Bases and Solvents, Electrolytic Conductance
	LO-8	Electrochemistry and Potentials, Colligative Properties of Non-electrolytes
<b>Paper 3</b>	LO-1	Qualitative Analysis of Single Organic Compounds
	LO-2	Qualitative Analysis of Inorganic Salt Mixtures
<b>Paper 4</b>	LO-1	Concepts and Applications of Gravimetric and Volumetric Analysis
	LO-2	Error Analysis and Computer Applications in Chemistry
	LO-3	Industrial Chemistry of Fuels, Fertilizers, Glass and Ceramics
	LO-4	Industrial Chemistry of Polymers, Paints, Varnishes and Synthetic Dyes, Drugs and Pharmaceuticals
	LO-5	Environmental Chemistry of the Atmosphere, Hydrosphere and Lithosphere
	LO-6	Industrial Chemistry of Fats, Oils and Detergents, Pesticides, Food Additives
	LO-7	Quantitative Estimations of Acid/ Base Mixtures, Water Hardness and Determination of Simple Physical Parameters

## Course Specific Outcomes for BSc Chemistry General (CBCS)

After successful completion of the BSc Chemistry General CEMG (CBCS) Program, the students will have an in-depth knowledge of the following areas of the subject. They will be aware of their applications in research and industry, and be ready to put the knowledge to test in their careers and vocations. The specific domains are outlined below in the column on the right.

Semester and Papers	Learning Outcomes	Knowledge Domains Addressed
<b>Semester I</b>  Paper 1 CC1/GE1	LO-1	Kinetic Theory of Gases and Real Gases
	LO-2	Liquids -Definition and Properties
	LO-3	Chemical Kinetics- concepts and Rate Laws
	LO-4	Atomic Structure- Concepts, Models and Configurations
	LO-5	Chemical Periodicity, Trends and Characteristics of s-,p-, d-,f- Elements
	LO-6	Acids and Bases- Concepts and Applications
	LO-7	Electronic Displacements in Organic Chemistry
	LO-8	Stereochemistry in Organic Chemistry
	LO-9	Nucleophilic Substitution and Elimination Reactions
	LO-10	Quantitative Estimations – Acid/Base Titrations, Permanganometry, Dichromatometry
<b>Semester II</b>  Paper 2 CC2/GE2	LO-1	Chemical Thermodynamics- Enthalpy, Entropy and Second Law
	LO-2	Chemical Equilibrium- Concepts and Principles
	LO-3	Solutions-Ideal and Non-ideal
	LO-4	Phase Equilibria- Concepts and Phase Diagrams
	LO-5	Solids-Concepts, Laws of Crystallography
	LO-6	Aliphatic Hydrocarbons- Alkanes, Alkenes and Alkynes
	LO-7	Error Analysis and Computer Applications in Chemistry
	LO-8	Redox Reactions- Equations, Potential, Titration and Indicators
	LO-9	Experimental Study of Physical Parameters in/of Solutions
<b>Semester III</b>  Paper 3 CC3/GE3	LO-1	Chemical Bonding ( Ionic, Covalent) and Molecular Structure (MOT)
	LO-2	Comparative Study of p-Block Elements
	LO-3	Transition elements- Characteristic s of 3d-, Lanthanoids and Actinoids
	LO-4	Coordination Chemistry- Salient Features and Drawbacks of VBT
	LO-5	Ionic Equilibria- Concepts and Applications
	LO-6	Conductance- Principles, Laws and Applications
	LO-7	Electromotive Force-Cells, Potentiometric Titrations
	LO-8	Aromatic Hydrocarbons
	LO-9	Organometallic Compounds and Aryl Halides
	LO-10	Qualitative Semimicro Analysis of Inorganic Mixtures
<b>Semester III</b>  Paper 4 SEC-A1	LO-1	Sampling, Accuracy, Precision, Error and Experimental Data Analysis
	LO-2	Analysis of Soil-Composition and Parameters
	LO-3	Analysis of Water-Definition, Sampling and Purification Methods
	LO-4	Analysis of Food Products- Nutritional Value, Food Processing, Preservation and Adulteration
	LO-5	Chromatography- Principles, Paper and TL- techniques
	LO-6	Ion-Exchange-Principles and Resins

	LO-7	Analysis of Cosmetics- Constituents and Functions
	LO-8	Application and Instrumental Techniques- in Food& Beverage, Medicines etc
<b>Semester IV</b>  Paper 5 CC4/GE4	LO-1	Alcohols, Phenols and Ethers
	LO-2	Carbonyl Compounds
	LO-3	Carboxylic Acids and Derivatives
	LO-4	Amines and Diazonium Salts
	LO-5	Amino Acids and Carbohydrates
	LO-6	Crystal Field Theory- Tetrahedral and Octahedral Symmetry
	LO-7	Quantum Chemistry and Spectroscopy
	LO-8	Qualitative Analysis of Single Solid Organic Compound
	LO-9	Identification of Pure Organic Compounds
<b>Semester IV</b>  Paper 6 SEC-B3	LO-1	Drug Discovery, Design, Development, Retrosynthetic Approach
	LO-2	Synthesis of Analgesics, Antipyretics and Anti- inflammatory Agents
	LO-3	Synthesis of Antibiotics, Antifungals, Antivirals
	LO-4	Synthesis of CNS Agents, Cardiovascular, Anti-Leprosy and HIV Drugs
	LO-5	Fermentation Process - Applications in Commercial Productions of Vitamins, Antibiotics and Industrial Raw Material
<b>Semester V</b>  Paper 7 SEC-A2	LO-1	Carbohydrates-Biological Importance and Cell Energetics
	LO-2	Proteins and Enzymes- Classification, Nomenclature, Structure,Functions
	LO-3	Lipids, Lipoproteins and Hormones- Classification, Importance, Biochemical Functions
	LO-4	DNA Structure and Role, Role of RNA, The Genetic Code and Gene Therapy
	LO-5	Biochemistry of Disease- Diagnostic Approach with Blood and Urine Analysis
<b>Semester V</b>  Paper 8 DSE-A1	LO-1	Synthesis and Modification of Inorganic Solids
	LO-2	Inorganic Solids of Technological Importance
	LO-3	Nanomaterials and Bionanocomposites- Overview and Preparations
	LO-4	Engineering Materials for Mechanical Construction
	LO-5	Composite Materials- Classification, Environmental Effects, Applications
	LO-6	Speciality Polymers- Classification, Properties, Manufacturing, Applications
	LO-7	Cation Exchange and TDS Processes in Laboratory
	LO-8	Synthesis of Hydrogels and Nanoparticles in Laboratory
<b>Semester VI</b>  Paper 9 SEC-B4	LO-1	Pesticides- Natural and Synthetic, Benefits and Adverse Effects
	LO-2	Pesticides- Structure –Activity Relationship
	LO-3	Synthesis, Manufacture, Use of Organochlorines and Organophosphates
	LO-4	Synthesis, Manufacture, Use of Carbamates, Quinones, Anilides
<b>Semester VI</b>	LO-1	Green Chemistry- Introduction, Goals and Limitations
	LO-2	Green Chemistry-Principles, Designing Syntheses and Atom Economy
	LO-3	Green Chemistry-Minimising Toxicity and Hazardous Products

Paper 10 DSE-B1	LO-4	Green Solvents, Use of Alternative Energy Sources and Catalytic Reagents
	LO-5	Examples of Green Syntheses of Compounds
	LO-6	Microwave and Ultrasound Assisted Reactions
	LO-7	Green Approach to Common Organic Reactions and Rearrangement Reactions
	LO-8	Future Trends-Catalysts, Biomimetic and Multifunctional Reagents, etc Green Chemistry in sustainable Development
	LO-9	Alkaloids and Terpenes- Natural Occurrence, Structure, Classification, Isolation and Syntheses
	LO-10	Green Reactions in the Laboratory

**Program Outcomes for Chemistry Honours (CBCS) Course**  
**Semester V and VI**

Semester V  Paper 13 CC5-11	LO-1	<b>Simple Harmonic Oscillator:</b> Setting up of One dimensional Schrödinger equation and discussion of solution and wave functions. Classical turning points, Expectation values of $x$ , $x^2$ , $p_x$ and $p_x^2$ .
	LO-2	<b>Angular momentum:</b> Commutation rules, quantization of square of total angular momentum and z-component; Rigid rotator model of rotation of diatomic molecule; Schrödinger equation, transformation to spherical polar coordinates; Separation of variables. Spherical harmonics; Discussion of solution
	LO-3	<b>Hydrogen atom and hydrogen-like ions:</b> Setting up of Schrödinger equation in spherical polar coordinates, Separation of variables, Solution of angular Part ( $\phi$ part), quantization of energy. Real wave functions. Average and most probable distances of electron from nucleus; Setting up of Schrödinger equation for many-electron atoms (He, Li). Statement of variation theorem and application to simple systems like particle-in-a- box, harmonic oscillator, hydrogen atom etc.
	LO-4	<b>LCAO :</b> Born-Oppenheimer approximation. Covalent bonding, valence bond and molecular orbital approaches, LCAO-MO treatment of $H_2^+$ ; Bonding and antibonding orbitals; Qualitative extension to $H_2$ ; Comparison of LCAO-MO and VB treatments of $H_2$ and their limitations.
	LO-5	<b>Statistical Thermodynamics</b> Configuration: Macrostates, microstates and configuration; calculation with harmonic oscillator; variation of $W$ with $E$ ; equilibrium configuration Boltzmann distribution: Thermodynamic probability, entropy and probability, Boltzmann distribution formula (with derivation); Applications to barometric distribution; Concept of ensemble - canonical ensemble and grand canonical ensembles Partition function: molecular partition function and thermodynamic properties. 3rd law: Absolute entropy, Plank's law, Calculation of entropy, Nernst heat theorem

		Adiabatic demagnetization: Approach to zero Kelvin, adiabatic cooling, adiabatic demagnetization.
	LO-6	<b>Numerical Analysis</b> Roots of Equation: Numerical methods for finding the roots of equations: Quadratic Formula, Iterative Methods (e.g., Newton Raphson Method). Least-Squares Fitting. Numerical Differentiation. Numerical Integration( Trapezoidal and Simpson's Rule)
	LO-7	<b>Programming 1:</b> Roots of equations: Determination of volume of van der Waals gas by solving the van der Waals Equation and comparison with ideal gas. Determination of pH of a weak acid.
	LO-8	<b>Programming 2:</b> Numerical differentiation Determination of change in pressure for small change in volume of a van der Waals gas. Study of EMF Changes in Potentiometric titrations.
	LO-9	<b>Programming 3:</b> Numerical integration Determination of entropy/ enthalpy change from heat capacity data. Determination of mean values from probability distributions of Kinetic Theory Gas.
Semester V Paper 14 CC5-12	LO-1	Polynuclear hydrocarbons and their derivatives
	LO-2	Heterocyclic compds: Reactivity, orientation and important reactions of furan, pyrrole, thiophene and pyridine
	LO-3	Heterocyclic compds: Synthesis (including retro) and mechanistic details, Benzo-fused 5- and 6-membered rings with one heteroatom

	LO-4	Alicyclic compds:conformation & reactivity in cyclohexane system, SN1, SN2, SNi, NGP pyrolyticsynelimination and fragmentation reactions.
	LO-5	<b>Pericyclic reactions:</b> Electrocyclic reactions, Cycloaddition reactions and Sigmatropic reactions
	LO-6	<b>Monosaccharides:</b> Confign&confn, anomeric effect, mutarotation, epimerization, glycosidation, osazone formation, oxidation, LBE rearr., stepping-up and-down of aldoses. <b>Disaccharides :</b> Glycosidic linkages, structure of sucrose, inversion of cane sugar.
	LO-7	<b>Aminoacids :</b> Syn with mech details: Strecker, Gabriel, isoelectric pt, zwitterions, electrophoresis, ninhydrin reaction, resolution. <b>Peptides:</b> Peptide linkage and its geometry, syntheses of peptides, solid-phase syn, peptide sequence, use of CNBr. <b>Nucleic acids</b> Pyrimidine and purine bases, nucleosides and nucleotides, comparison of alkaline hydrolysis of DNA and RNA, double helical structure of DNA.
	LO-8	<b>Practical :</b> Chromatographic Separations
	LO-9	<b>Practical :</b> Spectroscopic Analysis of Organic Compounds using <sup>1</sup> H NMR and IR spectra
Semester V Paper 15 DSE-A2	LO-1	<b>Computer Programming Basics (FORTRAN):</b> Elements of FORTRAN Language. FORTRAN Keywords and commands, Logical and Relational Operators, iteration, Array variables, Matrix addition and multiplication. Function and Subroutine.
	LO-2	<b>Introduction to Spreadsheet Software(MS Excel):</b> Creating a Spreadsheet, entering and formatting information, basic functions and formulae, creating charts, tables and graphs. Incorporating tables and graphs into word processing documents, simple calculations. Solution of simultaneous equations(for eg: in chemical Equilibrium problems) using Excel <b>SOLVER</b> Functions. Use of Excel <b>Goal Seek</b> function. Numerical Modelling: Simulation of pH metric titration curves, Excel functions <b>LINEST</b> and Least Squares. Numerical Curve Fitting, Regression, Numerical Differentiation and Integration
	LO-3	<b>Statistical Analysis:</b> Gaussian Distribution and Errors in Measurement and their effect on data sets. Descriptive Statistics using Excel, Statistical Significance Testing, the T test and the F test.

	LO-4	<b>Experiment-1</b> Plotting of Graphs using a spreadsheet. ( Planck's Distribution Law, Maxwell Boltzmann Distribution Curves as a function of temperature and molecular weight).
	LO-5	<b>Experiment-2</b> Determination of vapour pressure from Van der Waals Equation of State
	LO-6	<b>Experiment-3</b> Determination of rate constant from Concentration-time data using <b>LINEST</b> function
	LO-7	<b>Experiment-4</b> Determination of Molar Extinction Coefficient from Absorbent's data using <b>LINEST</b> function.
	LO-8	<b>Experiment-5</b> Determination of concentration simultaneously using Excel <b>SOLVER</b> Function.(For eg: Determination of [OH-], [Mg <sup>2+</sup> ] and [H <sub>3</sub> O <sup>+</sup> ] from K <sub>sp</sub> and K <sub>w</sub> data of Mg(OH) <sub>2</sub> .)
	LO-9	<b>Experiment-6</b> Simultaneous Solution of Chemical Equilibrium Problems to determine the equilibrium compositions from the Equilibrium Constant data at a given Pressure and Temperature.
	LO-10	<b>Experiment-7</b> Determination of Molar Enthalpy of Vaporization using Linear and Non Linear Leastsquares fit.
	LO-11	<b>Experiment-8</b> Calculation and Plotting of a Precipitation Titration Curve with MS Excel. Determination of K <sub>sp</sub> .
	LO-12	<b>Experiment-9</b> Acid-Base Titration Curve using Excel <b>Goal Seek</b> Function. Determination of pK <sub>a</sub> values and Concentration.
	LO-13	<b>Experiment-10</b> Plotting of First and Second Derivative Curve for pH metric and Potentiometric titrations . Determination of pK <sub>a</sub> Values, EMF and K <sub>sp</sub> .
	LO-14	<b>Experiment-11</b> Use of spreadsheet to solve the 1D Schrodinger Equation (Numerov Method). Determination of Energy for different state.

	LO-15	<b>Experiment-12</b> Michaelis-Menten Kinetics for Enzyme Catalysis using Linear and Non – Linear Regression. Determination of Rate constant and $V_{\max}$ for Enzyme Catalysis reaction.
Semester V Paper 16 DSE-B1	LO-1	Properties, Classification, Manufacture, Processing and Composition of Glass, Different Types of Specialised Glasses
	LO-2	Ceramics Types and Manufacture, Specialised Ceramics, Fullerenes and Carbon Nanotubes
	LO-3	Classification, Composition, Manufacture and Setting of Cement
	LO-4	Different Types of Fertilizers and Their Manufacture
	LO-5	Objectives and Classification of Surface Coatings, Composition and Properties of Paints
	LO-6	Special Paints, Dyes, Metallic Coatings, Anodizing
	LO-7	Role, Components, and Characteristics of Batteries, Working of Batteries, Fuel-, Solar- and Polymer-Cells
	LO-8	Classification and Properties of Alloys, Manufacture and Composition of Different Types of Steel
	LO-9	Principles of Catalysis, Properties and Application of Catalysts, Their Deactivation and Regeneration, Zeolites
	LO-10	Explosives- Properties and Preparation, Rocket Propellants
	LO-11	Analysis of Fertilisers, Ores, Alloys and Cement, Forming Surface Metallic Coatings, Preparation of Pigments in Laboratory
Semester VI Paper 17 CC6-13	LO-1	Theoretical Principles and Reactions of Qualitative Inorganic Analysis, Solubility Product and Common Ion Effect
	LO-2	Elements of Life and Their Roles, Chemical Reactions in Biological Systems, Ion Transport
	LO-3	Dioxygen Management Proteins, Hydrolytic Enzymes, Metal Ion Toxicity and Disease, Chelation Therapy
	LO-4	Organometallic Compounds, 18- and 16-e Rule, Carbonyls, Nitrosyls and Cyanides
	LO-5	Zeise's Salt, Ferrocene, Reactions of Organometallic Complexes
	LO-6	Catalysts and Catalysis by Organometallic Compounds
	LO-7	Qualitative Semimicro Analysis of Inorganic Salt Mixtures

Semester VI Paper 18 CC6-14	LO-1	<b>Introduction of spectroscopy:</b> Characteristics of electromagnetic radiation, Interaction of electromagnetic radiation with molecules and various types of spectra.
	LO-2	<b>Rotation spectroscopy:</b> Selection rules, intensities of spectral lines, determination of bond lengths of diatomic and linear triatomic molecules, isotopic substitution.
	LO-3	<b>Vibrational spectroscopy:</b> Classical equation of vibration, computation of force constant, amplitude of diatomic molecular vibrations, anharmonicity, Morse potential, dissociation energies, fundamental frequencies, overtones, hot bands, degrees of freedom for polyatomic molecules, modes of vibration. Diatomic vibrating rotator, P, Q, R branches.
	LO-4	<b>Electronic Spectroscopy:</b> Potential energy curves (diatomic molecules), Frank-Condon principle and vibrational structure of electronic spectra; Frank Condon factor. Bond dissociation and principle of determination of dissociation energy (ground state). Decay of excited states by radiative and non-radiative paths; Pre-dissociation; Fluorescence and phosphorescence, Jablonskii diagram.
	LO-5	<b>Raman spectroscopy:</b> Classical Treatment. Rotational Raman effect; Vibrational Raman spectra, Stokes and anti-Stokes lines; their intensity difference, Rule of Mutual Exclusion.
	LO-6	<b>Photochemistry and Theory of reaction rate:</b> <u>Lambert-Beer's law:</u> Lambert-Beer's law and its limitations, physical significance of absorption coefficients; Laws of photochemistry, Stark-Einstein law, Quantum Yield, actinometry. <u>Rate of Photochemical processes:</u> Photochemical equilibrium and the differential rate of photochemical reactions, Photostationary state; HI decomposition, H <sub>2</sub> -Br <sub>2</sub> reaction, dimerisation of Anthracene; photosensitised reactions, quenching; Role of photochemical reactions in biochemical processes, Chemiluminescence. Collision theory, Lindemann theory Transition State theory (classical treatment). Primary Kinetic Salt Effect.
	LO-7	<b>Surface tension and energy:</b> Surface tension, surface energy, excess pressure, capillary rise and surface tension; Work of cohesion and adhesion, spreading of liquid over other surface; Vapour pressure over curved surface; Temperature dependence of surface tension.

	LO-8	<b>Adsorption:</b> Physical and chemical adsorption; Freundlich and Langmuir adsorption isotherms; multilayer adsorption and BET isotherm (no derivation required); Gibbs adsorption isotherm and surface excess; Heterogenous Catalysis .
	LO-9	<b>Colloids:</b> Introduction of Lyophobic and lyophilic sols, Origin of charge and stability of lyophobic colloids. Coagulation and Schultz-Hardy rule, Zeta potential and Stern double layer (qualitative idea), Tyndall effect; Electrokinetic phenomena (qualitative idea only); Stability of colloids and zeta potential; Micelle formation.
	LO-10	<b>Dipole moment and polarizability:</b> Polarizability of atoms and molecules, Relation of dielectric constant and polarisation, Concept of molar polarisation for polar and non-polar molecules; Clausius-Mosotti equation and Debye equation (both without derivation) and their application; Determination of dipole moments using different Methods.
	LO-11	Determination of surface tension of a liquid using Stalagmometer
	LO-12	Determination of the indicator constant of an acid base indicator Spectrophotometrically. Study of Dissociation of Weak acid/Base (Indicator) and determination of Indicator Constant.
	LO-13	Verification of Beer and Lambert's Law for $\text{KMnO}_4$ and $\text{K}_2\text{Cr}_2\text{O}_7$ solution. Study of Variation of Absorbance on concentration and path length.
	LO-14	Study of kinetics of $\text{K}_2\text{S}_2\text{O}_8 + \text{KI}$ reaction, Spectrophotometrically. Determination of rate Constant of $\text{K}_2\text{S}_2\text{O}_8 + \text{KI}$ reaction.
	LO-15	Determination of pH dependent dissociation of Indicator and then determination of pH of unknown Buffer.
	LO-16	Determination of CMC of a micelle from Surface Tension Measurement. Development of concept regarding the variation of Surface Tension with the concentration of surfactant and micelle formation.
Semester VI Paper 19 DSE-A3	LO-1	Introduction to Green Chemistry
	LO-2	Principles of Green Chemistry and Designing a Chemical synthesis

	LO-3	Examples of Green Synthesis and some real world cases
	LO-4	Future Trends in Green Chemistry
	LO-5	<b>Alkaloids</b> : Hoffmann's exhaustive methylation, Emde's modification, Structure elucidation, Natural occurrence, Isolation and their physiological action, Synthesis of Hygrine, Medicinal importance .
	LO-6	<b>Terpenes</b> : Occurrence, classification, isoprene rule; Elucidation of structure and synthesis of Citral.
	LO-7	<b>Practical</b> : Acetylation of primary amine, [4+2] Cycloaddition, Preparation of biodiesel from vegetable/waste cooking oil, Photoreduction of benzophenone, Preparation of benzopinacolone, Solid state synthesis of benzoic acid from benzyl.
	LO-8	<b>Practical</b> : Benzoin condensation, Bromination of <i>trans</i> -stilbene, Preparation and characterisation of gold nanoparticles using tea leaves, Electrophilic aromatic substitution reaction, Green radical coupling reaction.
Semester VI Paper 20 DSE-B3	LO-1	Introduction and history of polymeric materials, Functionality and its importance.
	LO-2	Kinetics of Polymerization
	LO-3	Crystallization and crystallinity, Nature and structure of polymers
	LO-4	Determination of molecular weight of polymers
	LO-5	Glass transition temperature (T <sub>g</sub> ) and determination of T <sub>g</sub>
	LO-6	Polymer Solution
	LO-7	Properties of Polymer : Physical, thermal, Flow & Mechanical Properties.
	LO-8	<b>Practical</b> : Polymer synthesis- 1) Purification of monomer 2) Polymerization using BPO/AIBN 3) Preparation of nylon-66 4) Redox polymerization of acrylamide 5) Preparation of urea-formaldehyde resin

	LO-9	<b>Practical :</b> Polymer characterization- <ol style="list-style-type: none"> <li>1) Determination of M.Wt by viscometry</li> <li>2) Determination of viscosity-average M.Wt</li> <li>3) Determination of M.Wt by end group analysis</li> <li>4) Testing of mechanical properties of polymers</li> </ol>
	LO-10	<b>Practical :</b> Polymer analysis- <ol style="list-style-type: none"> <li>1) Estimation of the amount of HCHO by sodium sulphite method</li> <li>2) Instrumental techniques</li> <li>3) IR studies of polymers</li> </ol>

**Program Outcomes for Chemistry General (CBCS) Course**  
**Semester V and VI**

<b>Semester V</b>  Paper 7 SEC-A2	LO-1	Carbohydrates-Biological Importance and Cell Energetics
	LO-2	Proteins and Enzymes- Classification, Nomenclature, Structure, Functions
	LO-3	Lipids, Lipoproteins and Hormones- Classification, Importance, Biochemical Functions
	LO-4	DNA Structure and Role, Role of RNA, The Genetic Code and Gene Therapy
	LO-5	Biochemistry of Disease- Diagnostic Approach with Blood and Urine Analysis
<b>Semester V</b>  Paper 8 DSE-A1	LO-1	Synthesis and Modification of Inorganic Solids
	LO-2	Inorganic Solids of Technological Importance
	LO-3	Nanomaterials and Bionanocomposites- Overview and Preparations
	LO-4	Engineering Materials for Mechanical Construction
	LO-5	Composite Materials- Classification, Environmental Effects, Applications
	LO-6	Speciality Polymers- Classification, Properties, Manufacturing, Applications
	LO-7	Cation Exchange and TDS Processes in Laboratory
	LO-8	Synthesis of Hydrogels and Nanoparticles in Laboratory
<b>Semester VI</b>  Paper 9 SEC-B4	LO-1	Pesticides- Natural and Synthetic, Benefits and Adverse Effects
	LO-2	Pesticides- Structure –Activity Relationship
	LO-3	Synthesis, Manufacture, Use of Organochlorines and Organophosphates
	LO-4	Synthesis, Manufacture, Use of Carbamates, Quinones, Anilides
<b>Semester VI</b>  Paper 10 DSE-B1	LO-1	Green Chemistry- Introduction, Goals and Limitations
	LO-2	Green Chemistry-Principles, Designing Syntheses and Atom Economy
	LO-3	Green Chemistry-Minimising Toxicity and Hazardous Products
	LO-4	Green Solvents, Use of Alternative Energy Sources and Catalytic Reagents
	LO-5	Examples of Green Syntheses of Compounds

	LO-6	Microwave and Ultrasound Assisted Reactions
	LO-7	Green Approach to Common Organic Reactions and Rearrangement Reactions
	LO-8	Future Trends-Catalysts, Biomimetic and Multifunctional Reagents, etc Green Chemistry in sustainable Development
	LO-9	Alkaloids and Terpenes- Natural Occurrence, Structure, Classification, Isolation and Syntheses
	LO-10	Green Reactions in the Laboratory

**Netaji Nagar College for Women, Kolkata-92**  
**Department of Economics**

***Name of the Programme: Economics (Hon.)***

***Level: U.G.***

***C.B.C.S. Degree Programme: B.Sc Degree Course***

**PROGRAMME OUTCOMES (POs):**

**PO 1.** Students will be able to analyse the human behaviour, problems & solutions of different aspects of social sciences in cross cultural and global perspectives.

**PO 2.** Students will be able to evaluate how economic theories and models within social sciences have been established and maintained through systems of power and oppression.

**PO 3.** Students will be able to forecast the future course of changes and development through their knowledge and set different policies of government and other agencies.

**PO 4.** Students will be able to understand the economic conditions of an economy

**PROGRAMME SPECIFIC OUTCOMES (PSOs):**

After graduation the student will be able to learn -

**PSO 1.** The behavioural pattern of different economic agents, advance theoretical issues and their applications.

**PSO 2.** To expose the basic concepts of microeconomics and macroeconomic theory.

**PSO 3.** To equip with mathematical, statistical and econometric tools to analyze economic problems.

**PSO 4.** To formally analyze the theory of consumer behaviour, producer behaviour, markets, factor pricing, cost structure and revenue through advanced microeconomic theory.

**PSO 5.** To make students understand the long run dynamic issues like growth and technical progress.

**PSO 6.** To familiarize students to the basic concepts and theories of international trade, determinants, and dynamic effects of trade policies.

**PSO 7.** To make the students understand the functioning of banks, monetary and financial sectors of the economy, role of financial markets and Institutions, budget and balance of payments.

**PSO 8.** To expose the students to various economic problems and issues related to growth, development, sustainable development, environment with special reference to India.

**PSO 9.** To acquaint yourself with some basic mathematical and statistical methods to be applied in economics.

**PSO 10.** To acquaint themselves with the measurement of development with the help of theories along with the conceptual issues of poverty and inequalities with Indian perspectives.

**PSO 11.** To facilitate the historical developments in the economic thoughts propounded by different schools.

**PSO 12.** To learn the basic concept of monetary analysis and financial marketing in Indian financial markets and to learn the development issues of the Indian economy.

**PSO 13.** To acquaint themselves with some basic concepts of environmental economics along with the solution of the environmental problems.

**PSO 14.** To learn the real and monetary sides of International economics

**Netaji Nagar College for Women, Kolkata-92**

**Department of Economics**

**Course Outcome of Economics (Hon.)**

**C.B.C.S. Degree Programme: B.Sc Degree Course**

Sl	Semester	Course Code ECO A	Course Name	Course Outcome (COs) <i>After the successful completion of the course a student will be able -</i>
1.	Sem-I  ( July To December)	CC-1-1	<b>Introductory Microeconomics</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the basic subject matter of Economics <i>CO 2.</i> To understand how the markets work through demand and supply; <i>CO 3.</i> To identify the various determinants of firms' demand for factor services; market equilibrium. <i>CO 4.</i> To enable the students to apply the theories in analysing the micro issues of the real world. <i>CO 5.</i> To analyse the role of government intervention
		CC-1-2	<b>Mathematical Methods for Economics - I</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> The main outcome is to learn mathematical tools of economics through single variable optimization technique <i>CO 2.</i> Application of mathematical techniques in economic theory like integration of functions. <i>CO 3.</i> To understand the role of matrix algebra <i>CO 4.</i> To understand and apply the role of game theory in economics
2.	Sem-II  (January to June )	CC-2-3	<b>Introductory Macroeconomics</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the basic components of national Income and NI accounting <i>CO 2.</i> To understand the effects on NI due to a change in different macro variables <i>CO 3.</i> To suggest different macroeconomic policies to solve the macro problems of an economy <i>CO 4.</i> To understand the simple Keynesian model in a closed economy <i>CO 5.</i> To know about the classical system of macroeconomics <i>CO 6.</i> To understand the macroeconomic foundations like investment function
		CC-2-4	<b>Mathematical methods for Economics - II</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the behavioural pattern of several variables <i>CO 2.</i> To apply the multivariable optimizations <i>CO 3.</i> To apply the mathematical approach in micro and macro dimensions through difference equations and differential equations.
3.	Sem-III  (July To December)	CC-3-5	<b>Intermediate Microeconomics - I</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the behavioural pattern of consumers and applications of producers. <i>CO 2.</i> To learn the decision making process of different market structures. <i>CO 3.</i> To deal with the advance theoretical issues and their practical applications of input market
		CC-3-6	<b>Intermediate Macroeconomics - I</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To analyse the National Income determination in the Short run through IS-LM model <i>CO 2.</i> To understand the concepts of aggregate demand and aggregate supply of Complete Keynesian model <i>CO 3.</i> To get ample knowledge about monetary policy and government budgetary operations. <i>CO 4.</i> To analyse the roots of inflation, unemployment and expectations
		CC-3-7	<b>Statistical Methods for Economics</b>  Full Marks - 100 Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To apply the descriptive statistics <i>CO 2.</i> To understand elementary probability theory and probability distributions <i>CO 3.</i> To construct sample design <i>CO 4.</i> To draw statistical inference

		<b>SEC-3-1-A</b>	<b>Rural Development</b>  Full Marks - 100, Credit-2	<i>CO 1.</i> To understand different aspects of rural development <i>CO 2.</i> To know about Panchayats <i>CO 3.</i> To analyse the rural credit system and the role of Self help Groups <i>CO 4.</i> To evaluate critically the Government programmes
4.	Sem-IV (January to June)	<b>CC-4-8</b>	<b>Intermediate Microeconomics - II</b>  Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the functioning of imperfect market structure <i>CO 2.</i> To get full knowledge about the input market behaviour under imperfect competition <i>CO 3.</i> To analyse the general equilibrium, efficiency and welfare.
		<b>CC-4-9</b>	<b>Intermediate Macroeconomics - II</b>  Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To understand the basic tenets of New classical and New Keynesian theories <i>CO 2.</i> To understand the macroeconomic foundations like consumption and demand for money <i>CO 3.</i> To analyse the growth models in development economics.
		<b>CC-4-10</b>	<b>Introductory Econometrics</b>  Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To get the idea about the nature and scope of econometrics <i>CO 2.</i> To understand the classical linear regression model and the applications. <i>CO 3.</i> To understand the multiple linear regression model <i>CO 4.</i> To know about statistical inference in linear regression model and violations of classical assumptions
		<b>SEC-4-2-B</b>	<b>Managerial Economics</b>  Full Marks - 100, Credit - 2	<i>CO 1.</i> To understand the break-even analysis, pricing policies. <i>CO 2.</i> To acquire ample knowledge about capital budgeting. <i>CO 3.</i> To understand the fundamentals of cost of capital . <i>CO 4.</i> To apply the method of inventory management.
5.	Sem-V (July To December)	<b>CC-5-11</b>	<b>International Economics</b>  Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)	<i>CO 1.</i> To know about Absolute & Comparative Advantages of Trade <i>CO 2.</i> To get the idea of The Building Blocks of Trade Theory <i>CO 3.</i> To understand the trade models <i>CO 4.</i> To follow the applications of Neo-classical Trade Models <i>CO 5.</i> To understand the trade policy <i>CO 6.</i> To know the Open economy macroeconomics and BoPs

## **Department of English- Programme Outcomes**

The evolution of English into a global language, transforming it into an ‘indispensable link language’ between people not only across borders but within a culturally and ethnically diverse nation like India, has influenced English language teaching and learning greatly. The history of English language teaching can be traced back to the colonial period when the British imparted instructions in English with the sole purpose of training a class of high caste Indians to become mediators of British administration. The British policy, so widely popularised was to create native communicators who would be “Indians in blood and colour but English in taste, in opinions, and morals and intellect.” Although, it was decided by the Indian government, that the official status of English as an assistant language is to be terminated after 15 years of Independence, it continues to remain the main language in both oral and written modes of communication. It serves as a connecting link among formal and informal relations.

The scope of the study of LCC course is so designed as to inform the students of the varieties of English language, of the factors affecting effective communication, and lastly propelling them towards creative reproduction of language. The course caters to the B.A general students and is structured in a fashion so as to enable them to find employment opportunities in different vocational sectors like journalism, anchoring, marketing, tourism and others in future where linguistic skills play a deterministic role. The subject motivates the students to realize how language enables better cognition of one’s own self, one’s social surrounding and relationships. Language gives credit to one’s emotions and experience. Whether arousing public sentiments leading to agitations or comforting the distressed mind or providing instructions on fellow feeling and sympathy, everything is made possible through successful rendition of language. Reading of the literary pieces by prominent writers simultaneously encourages contemplation and elevates the minds of the students.

### **Programme Outcomes (English General Course; LCC):**

#### **PO 1. Analytical and Communication Skills:**

The Course helps in proper understanding of the linguistic varieties, British and American English language respectively. They are educated on the similarities and the differences between the two languages determined by political, socio-cultural factors. A thorough knowledge on the two dominant variants of English discourses allows students to analyse and consider cultural constitution of a person and communicate effectively.

#### **PO 2. Cognitive Knowledge:**

The study attempts to help students to make sense of their inner selves and the society revolving around them. It acquaints them with the political, socio-cultural history of India through the writings of the precursors of Indian Literature like R.K. Narayan, Prem Chand, Bhisham Sahni Prushottam Lal, Nissim Ezekeil and others. It also strives to make them responsible citizens and ambassadors of environmental protection, conservation and regeneration through the inspirational life sketch of Chandi Prasad Bhatt, a dedicated environmentalist.

### PO 3. Inculcating Social and Ethical Values:

The literary pieces selected for critical analysis under the purview of this course bear a national as well as an ideological responsibility. They constantly harp upon the pervading evils of bigotry, caste bias, class differences within the existing social system and seeks to promote filial bonding, religious tolerance, sympathy and love. The poem 'Life' by Purushottam Lal, 'Roots' by Ismat Chughtai are testimonies of the aforesaid care ethics.

### PO 4. Promotion of Concepts of National Integration:

The texts of Shashi Tharoor and Ismat Chughtai try to point out that India's pluralism and religious tolerance serve as the binding force in an infinitely diverse nation like India and lead towards national integration. Tharoor's poignant utterance that "we are all minorities in India" creates resonance and establishes an element of commonality among citizens.

### PO 5. Inter-disciplinary:

The study caters to the learners from all disciplines and helps them to refine their communication skills essential for securing a job in any field for example media, anchoring, journalism, tourism, marketing, teaching, content development, Human Resource management and likewise.

## **Programme Specific Outcomes:**

PO 1. The Course emphasizes on learning the use of formal and informal English Language based on place, time and relation.

PO 2. The Study helps the students to recognize the newly emerging trends of British English and American English. They need to take account of the differences between the two varieties regulated by regional and cultural specificities and contexts.

PO 3. The Study seeks to establish connections between spoken and written language

PO 4. The Course attempts to enlighten the students in the techniques and methods of effective communication and content creativity like writing story, travelogue, and advertisement matters.

PO 5. English as a discipline makes the students conscious of the political and social dynamics of India's both public and private domain as navigated by eminent critics like Ismat Chughtai, Shashi Tharoor, Gauri Deshpande and others.

**Netaji Nagar College for Women, Kolkata-92**

**Department of English**

**Course Outcome of AECC- Communicative English (Compulsory Education for all)**

Sl	Semester	Course Code	Course Name	Course Outcome (Cos) <i>After the successful completion of the course a student will be able-</i>
1.	Sem-I (July to December)	AECC1	Ability Enhancement Compulsory Course or Communicative English  Full Marks-100, Credit-2	CO 1. To understand the basic English grammar fundamental for language formation. CO 2. To make proper application of the grammatical rules in both oral and written modes of communication. CO 3. To identify the errors in the use of the language in both verbal and nonverbal form.

**Netaji Nagar College for Women, Kolkata-92**

**Department of English**

**Course Outcome of English General (LCC) for B.A. General Students**

Sl	Semester	Course Code	Course Name	Course Outcome (Cos) <i>After the successful completion of the course a student will be able-</i>
1.	Sem-III (July to December)	LCC1-1  ENG-C	Language Variety and Stylistics  Full Marks-100, Credit-6 (Th:5+ Tu:1)	CO 1. To learn the difference between formal transmission of information in an organizational set up, and casual exchange of thoughts and ideas with familiar people in a friendly environment. CO 2. To understand the dissimilarity in language and contrast of purpose in case of official communication compared to personal communication CO 3. To write letters, emails, report events, develop content from the acquired knowledge of the subject and rules of composition in each case. CO 4. To evaluate the validity of the sentences, correct syntactical errors, mistakes in tense and verbs and prevent

				<p>miscommunication of ideas or disrespect of the language.</p> <p>CO 5. To distinguish between British English and American English and participate in effective communication considering the ethical composition of the addressee.</p>
2.	<p>Sem-IV</p> <p>(January to June)</p>	<p>LCC2-1</p> <p>ENG-G</p>	<p>Language, Society and Personality (Alternative English)</p> <p>Full Marks-100, Credit-6 (Th:5+ Tu:1)</p>	<p>CO 1. To understand the various application of language in expressing social impressions in writing.</p> <p>CO 2. To discern how language connects individual and society.</p> <p>CO 3. To explore the creative writings by the experts in order to acquaint themselves with the style of representing one's political, social, cultural, and historical beliefs and ideas.</p> <p>CO 4. To learn presentation of biographical history, distinct from other creative writings, in factual, reliable and transparent form.</p> <p>CO 5. To acquaint themselves with the socio-political-cultural history of India and link the present with the past.</p> <p>CO 6. To familiarize with the socio-political-cultural indices affecting the social and private life of an individual.</p>
3.	<p>Sem- V</p> <p>(July to December)</p>	<p>LCC1-2</p> <p>ENG-C</p>	<p>Language, Imagination and Creativity</p> <p>Full Marks-100, Credit-6 (Th:5+ Tu:1)</p>	<p>CO 1. To differentiate between plain colloquial language and artistic figurative language leaving lasting impression upon the readers.</p> <p>CO 2. To compare the variance in language of prose and language of poetry.</p> <p>CO 3. To understand the application of figures of speech into poetical compositions.</p> <p>CO 4. To expose themselves to beautifully structured, brilliant, compact ideas.</p> <p>CO 5. To learn content creativity like writing stories, travelogues and advertisement matters. Practicing content writing will ensure placement in different corporate jobs.</p>
4.	<p>Sem- VI</p> <p>(January to June)</p>	<p>LCC2-2</p> <p>ENG-G</p>	<p>Language, Creativity and Analysis</p>	<p>CO 1. To learn how language evolves through creativity.</p> <p>CO 2. To establish link between past and present forms of writing, and draw</p>

			<p>(Alternative English)</p> <p>Full Marks-100, Credit-6 (Th:5+ Tu:1)</p>	<p>parallels and intersections between different generations of writers.</p> <p>CO 3. To analyse and decode the use of various figurative speech within the written language for the sake of artistic embellishment</p> <p>CO 4. To acquire comprehensive knowledge about English language through the refinement of the analytical aptitude and exposure to mature presentation skills of world renowned writers.</p>

**NETAJI NAGAR COLLEGE FOR WOMEN**  
**DEPARTMENT OF ENVIRONMENTAL SCIENCE**

**(PROGRAMME SPECIFIC OUTCOMES)**

**E**nvironmental Science comprises inputs from several disciplines and is considered as an interdisciplinary subject. Therefore students of Environmental science acquire in depth knowledge and skills in relevant fields like natural resource management, biodiversity conservation, environmental impact assessment, environmental management, waste management, pollution control, green technologies, social issues related to equitable use of resources and sustainable development.

Environment Sciences programme bridges the gap between the school level and M.Sc. programmes on environment and its management offered by various Universities. Therefore Students graduating from Environmental Science will be able to take up higher studies in Environmental Science and other related spheres and subsequently take up careers in the fields of environmental research and monitoring from different Indian and Foreign Universities.

Environmental Science programme deal with the topics that will cover issues from all attributes of the environment; issues from physical environment to socioeconomic and cultural environment. It provide students with the scope to develop knowledge base covering all attributes of the environment and enable them to attain scientific/technological capabilities to address questions and finding solutions vis-à-vis environmental issues in general and effect of anthropogenic activities on environment in particular.

Environmental Science is considered as a job oriented programme and has significant relevance to the current needs of our society. Several organisations have the essential need of technical manpower and the knowhow to handle the environmental needs of the current scenario vis-à-vis scientific, technological, remedial and socioeconomic types. Therefore students graduating with Environmental Science will have ample scope to pursue their carrier in different jobs offered by government or private sectors in the field of teaching, research management etc. linked with environment.

On successful completion of Undergraduate programme in Environmental Science of University of Calcutta a student will-

**PSO1:** Acquire in depth knowledge related to environment and its components and their interrelationships.

**PSO2:** Acquire detailed knowledge on perspectives of Environmental Education in both formal and non-formal mode and its importance in the current scenario to our society.

**PSO3:** Learn ecological methodologies and techniques related to measurement of biodiversity and interpreting it in the context of conservation of biodiversity.

**PSO4:** Acquire detailed knowledge on physical and chemical processes of the environment and processes responsible for alteration of the same.

**PSO5:** Acquire detailed knowledge on water resource and land management in the context of water harvesting techniques and proper land use methodologies.

**PSO6:** Learn all attributes of Environmental biotechnology and its applications.

**PSO7:** Develop analytical skills for quantitative estimation of water and air quality parameters and physico-chemical parameters of soil.

**PSO8:** Able to prepare projects or plans on topics related to environment and its conservation.

**PSO9:** Develop sound knowledge about atmospheric process, global climate change and ozone layer depletion.

**PSO10:** Learn application of remote sensing and GIS in water resource management, land use planning, forest resources, marine and atmospheric studies.

**PSO11:** Develop sound knowledge and enhance skills on topics such as Environmental Impact Assessment, Environmental Management, Cost benefit analysis, Life cycle assessment and its applications.

**PSO12:** An insight into the international law and response towards global environmental issues and enforcement of international protocols to combat the issues. Also student will be able to learn Constitutional provisions, Legislations of and Policies framework of India related to environment and its conservation.

**PSO13:** Gain knowledge on cause and effects of pollution of different spheres and its minimization techniques.

**PSO14:** Gain in depth knowledge on all aspects of waste management.

**PSO15:** Develop sound knowledge on green planning, green infrastructure, green chemistry and green technologies.

**PSO16:** Develop sound knowledge on energy demand, energy resources and its inter relationship with environment.

**PSO17:** Develop sound knowledge on all attributes of Environmental Health and Toxicology and perform experiments related to toxicity assessment.

**PSO18:** Develop sound knowledge on disaster management along with hazard, vulnerability and risk assessment.

**PSO19:** Inculcate knowledge of environmental accounting, environmental modelling and statistical procedures.

**PSO20:** Thoroughly understand the concerns of sustainable development meeting the sustainable development goals.

## COURSE OUTCOMES

### ENVIRONMENTAL SCIENCE (HONOURS)

#### Semester-I, II, III, IV (Under CBCS)

Sl No.	Semester	Course Code, ENVA Paper Code	Course Name	Unit	Course Outcomes After completion of the following courses students will be able to-
1.	I	ENV-A-CC-1-1-TH  Full Marks: 50 Credit : 4	EARTH AND EARTH SURFACE PROCESSES	1	To understand the origin of Earth and its components over geological time.
				2	Understand basic geological and tectonic processes and various aspects of the earth's geomorphological formations.
				3	Understand the development of various geological components of the earth.
				4	Describe with the evolution of Earth's atmosphere its composition, vertical structure and functionality along with atmospheric interfaces.
				5	Describe the formation of mountains and river systems of India along with evolution of Monsoon and its effect in India.
2.	I	ENV-A-CC-1-1-P (Practical) Full Marks: 30 Credit : 2	EARTH AND EARTH SURFACE PROCESSES	Prac.	Recognize and use the various tools and techniques employed for identification of rocks and minerals and interpret toposheets vis-à-vis geomorphology study.
3.	I	ENV-A-CC-1-2-TH Full Marks: 50 Credit : 4	PHYSICS AND CHEMISTRY OF ENVIRONMENT	1	To have a comprehensive understanding of the fundamental concepts related to Environmental Physics
				2	To have a comprehensive understanding of the fundamental concepts related to Environmental Chemistry
				3	Describe the interactions between atmospheric components to understand the basics of atmospheric system.
				4	Describe the concepts of water chemistry and its relation to water quality
				5	Describe clearly the composition, physicochemical parameters and nutrient dynamics of soil.
					Contd...

4.	I	ENV-A-CC-1-2-P (Practical) Full Marks: 30 Credit : 2	PHYSICS AND CHEMISTRY OF ENVIRONMENT	Prac.	To perform the analysis of alkalinity, acidity, hardness of water samples and measure pH, moisture and conductivity of soil samples.
5.	II	ENV-A-CC-2-3-TH Full Marks: 50 Credit : 4	WATER AND WATER RESOURCES MANAGEMENT	1	Describes the basics of the various water sources and the continually ongoing hydrological cycle and its significance for existence of life on the earth.
				2	Understand the physicochemical properties and biological entities existing in the various aquatic ecosystems and their subsequent implications to the environment.
				3	Understand the importance of water management and the hydrogeological features above and beneath the earth.
				4	Understand the concept of wetlands, its functionality and conservation practices.
				5	Describes the different water resources available in India. Critically examine water resource management systems in India specially river sharing among different states.
6.	II	ENV-A-CC-2-3-P (Practical) Full Marks: 30 Credit : 2	WATER AND WATER RESOURCES MANAGEMENT	Prac.	To learn the basic techniques and consecutively perform analysis of the physiochemical properties of the water related to water quality.
7.	II	ENV-A-CC-2-4-TH Full Marks: 50 Credit : 4	LAND MANAGEMENT AND SOIL CONSERVATION	1	Develop an understanding of land as resource, soil health, soil degradation and critically examine the impact of soil degradation on agriculture and food security and need for soil conservation.
				2	To have a comprehensive understanding of the fundamental concepts soil science
				3	Develop detailed knowledge on soil erosion, soil pollution, nutrient depletion in soil, fertilizer management and soil conservation techniques.
				4	Develop the ability to judge the impacts of land use land cover change in the two biodiversity hotspots of India.
				5	Assess economic valuation of land degradation, correlate threats

					of land degradation with ecosystem services and learn the different aspects related to sustainable land use planning.
8.	II	ENV-A-CC-2-4-P (Practical) Full Marks: 30 Credit : 2	LAND MANAGEMENT AND SOIL CONSERVATION	Prac.	To perform the analysis of organic carbon, water holding capacity, carbonate and bicarbonate and NPK content of soil samples
9.	III	ENV-A-CC-3-5-TH Full Marks: 50 Credit : 4	ECOLOGY AND ECOSYSTEMS	1	To understand the basic rules and concepts of ecology, ecological processes of nature and relationship between organism and their surrounding environment.
				2	Explain the concept of population Understand and predict population dynamics of the future.
				3	Describes composition and dynamics of community. Judge how the habitat shapes the distribution and abundance of species. Understand the relationship between different species. Examine the process of succession.
				4	Explain the interconnectedness of organisms to their environment. Examine the structure and functions of ecosystem.
				5	Understand the cyclic pathways of essential elements among different components of the environment. Develop the ability to judge ecological dynamics and regulation of vital processes in the environment.
10.	III	ENV-A-CC-3-5-P (Practical) Full Marks: 30 Credit : 2	ECOLOGY AND ECOSYSTEMS	Prac.	Enhance their ability to apply lessons learned from field experience vis-a- vis ecological dynamics of nature. Record biotic and abiotic components and interactions Develop ecological hypotheses and designing studies in the field and laboratory settings.
					Contd...

11.	III	ENV-A-CC-3-6-TH Full Marks: 50 Credit : 4	ENVIRONMENTAL BIOTECHNOLOGY	1	Understand the basics concepts related to classification of microorganisms, microbial growth and staining techniques
				2	Describe the Structure and Function of DNA, RNA and Protein their biological significance and central dogma of biology.
				3	Acquire in depth knowledge of all the aspect related to Recombinant DNA technology
				4	Describe the role of biotechnology in wastewater treatment, solid waste management. Understand role of Environmental Biotechnology in general and bioremediation and phytoremediation technologies in particular
				5	Understand ecologically safe products such as PGPR bacteria, bio-fertilizers etc. and processes including Integrated pest Management, Bio-mining and microbial transformation
				6	Acquire in depth knowledge of GM and GMOs and its pros and cons. Identify the case specific studies related to GMOs To have an functional understanding of Biosafety Protocol
12.	III	ENV-A-CC-3-6-P (Practical) Full Marks: 30 Credit : 2	ENVIRONMENTAL BIOTECHNOLOGY	Prac.	Perform Gram staining, MPN and ABO Blood grouping Review Research article related to various fields of Environmental Biotechnology and prepare power point presentation
13.	III	ENV-A-CC-3-7-TH Full Marks: 50 Credit : 4	ATMOSPHERE AND GLOBAL CLIMATE CHANGE	1	Understand the energy transfer mechanisms and their significance for existence of life on the earth
				2	Understand the various air mass development and movement across the globe with a deeper insight into the Indian monsoon formation
				3	Deal with measurable or systematic principles for meteorological features and

					prediction of atmospheric conditions from plume behaviour
				<b>4</b>	Emphasize on the potentiality of the various greenhouse gases to induce changes in climatic conditions and various measures taken by the governing bodies to combat such issues.
				<b>5</b>	Understanding the significance of the protective ozone layer and the reasons behind its destruction along with the mitigation measures approached.
<b>14.</b>	<b>III</b>	<b>ENV-A-CC-3-7-P (Practical) Full Marks: 30 Credit : 2</b>	<b>ATMOSPHERE AND GLOBAL CLIMATE CHANGE</b>	Prac.	Deal with various instruments to determine meteorological parameters
<b>15.</b>	<b>III</b>	<b>SECA2 Full Marks: 80 Credit : 2</b>	<b>WILDLIFE MANAGEMENT</b>	<b>1</b>	Understand the historical and current perceptions of human wildlife relationship to efficiently discourse wildlife issues and the role of citizens in conservation and management of wildlife decision-making.
				<b>2</b>	Understand the fundamental concepts in wildlife conservation and management with help of special case studies of India.
				<b>3</b>	Develop skills for assessing status and estimating wildlife for wildlife management practices and conservation.
<b>16.</b>	<b>IV</b>	<b>ENV-A-CC-4-8-TH Full Marks: 50 Credit : 4</b>	<b>SYSTEMATICS AND BIOGEOGRAPHY</b>	<b>1</b>	Develop an understanding of the concept of species, classification and their evolutionary relationship based on the morphological and phylogenetic characters.
				<b>2</b>	To have a functional understanding of the rules and regulations adopted universally for naming of species and its classification.
				<b>4</b>	Illustrates the global species distribution, the key biogeographic principles along with processes behind this distribution in the past and present scenario. Provide an outline of the approaches for studying the species geographic ranges, evolution and conservation.
					Contd...

				<b>5</b>	Understanding the processes and barriers involved in species formation, dispersal and extinction.
<b>17.</b>	<b>IV</b>	<b>ENV-A-CC-4-8-P (Practical) Full Marks: 30 Credit : 2</b>	<b>SYSTEMATICS AND BIOGEOGRAPHY</b>	Prac.	To classify and identify environmentally significant flora and fauna according to taxonomy.
<b>18.</b>	<b>IV</b>	<b>ENV-A-CC-4-9-TH Full Marks: 50 Credit : 4</b>	<b>URBAN ECOSYSTEMS</b>	<b>1</b>	Understand urban setting and its relation to environment comprising social, cultural ecological and economical perspectives.
				<b>2</b>	Understand all aspects of urban dwelling in general and Urban sprawl and its effects in particular
				<b>3</b>	Acquire in depth knowledge of green technology, green energy, green infrastructure, green economy, and, green chemistry; sustainable consumption of resources
				<b>4</b>	Understand all aspects of controlled nature and importance of green belts.
				<b>5</b>	To have a functional understanding of green buildings including LEED, Eco-mark certification, green planning , green cities rain water harvesting and its importance in Municipal areas and role of informal sector in waste management, public transportation for sustainable development
<b>19.</b>	<b>IV</b>	<b>ENV-A-CC-4-9-P (Practical) Full Marks: 30 Credit : 2</b>	<b>URBAN ECOSYSTEMS</b>	Prac.	Develop skills in performing urban surveys to record all data required in studying an urban ecosystem.
<b>20.</b>	<b>IV</b>	<b>ENV-A-CC-4-10-TH Full Marks: 50 Credit : 4</b>	<b>ENVIRONMENTAL LEGISLATION AND POLICY</b>	<b>1</b>	Understand the basic judicial and legislative structure in India and an introduction to Indian Constitution
				<b>2</b>	To have a comprehensive understanding on the evolution of Environmental laws in India since the pre-colonial period and inclusion of environmental issues in the laws and policies.
					Contd...

				<b>3</b>	Focus on development of national Environmental laws and enable students to analyse the same for environmental protection.
				<b>4</b>	Understand the role of judiciary bodies towards statutory framework on protection of environment and prevention of pollution.
				<b>5</b>	An insight into the international law and response towards major environmental issues at global level and enforcement of international protocols to combat the issues.
<b>21.</b>	<b>IV</b>	<b>ENV-A-CC-4-10-P (Practical) Full Marks: 30 Credit : 2</b>	<b>ENVIRONMENTAL LEGISLATION AND POLICY</b>	Prac.	Understand the scope of environmental law and the Indian legal system against activities adversely impacting the environment and Appreciate some case studies of environmental litigation.
<b>22.</b>	<b>IV</b>	<b>SEC B1 Full Marks: 80 Credit : 2</b>	<b>ENVIRONMENTAL IMPACT AND RISK ASSESSMENT</b>	<b>1</b>	Acquire detailed knowledge on Environmental Impact Assessment (EIA) and Environmental Management Plan
				<b>2</b>	Understand thoroughly EIA types, Cost benefit analysis, ISO 14000, Environmental Management, Environmental audit Lifecycle assessment and Sustainable development.
				<b>3</b>	To have a functional understanding on EIA regulations in India and also to deal with Case studies report pertaining to EIA.
				<b>4</b>	Understand thoroughly Hazard and risk assessment and Environmental monitoring.

**ENVIRONMENTAL SCIENCE (GENERAL)**

**Semester-I, II, III, IV (Under CBCS)**

**COURSE OUTCOMES**

Sl No.	Semester	Course Code, ENVG Paper Code	Course Name	Course Outcomes  After Completion of the following Courses Students will be able to-
1.	I	ENV-G-CC/GE-1- 1-TH Full Marks: 50 Credit : 4	FUNDAMENTALS OF ENVIRONMENTAL SCIENCE	<b>CO1:</b> Acquire detailed knowledge of the environment and its components and interfaces. <b>CO2:</b> Understand Multidisciplinary nature, scope and objective of Environmental Science. <b>CO3:</b> Understand Man - Environment relationships. <b>CO4:</b> Understand the modes of Environmental Literacy and its importance.  <b>CO5:</b> Understand Environmental problems and global environmental issues and critically appreciate the environmental concerns of today
2.	I	ENV-G-CC/GE-1- 1-P (Practical) Full Marks: 30 Credit : 2	FUNDAMENTALS OF ENVIRONMENTAL SCIENCE	<b>CO1:</b> Describe the laboratory safety rules in Environmental Science Laboratory <b>CO2:</b> Describe principle and application of instruments in Environmental Science Laboratory. <b>CO3:</b> Prepare assignments on Environmental education and global environmental issues.
3.	II	ENV-G-CC/GE-2- 2-TH Full Marks: 50 Credit : 4	ECOLOGY AND BIODIVERSITY	<b>CO1:</b> Understand the basic concepts of Ecological Science. <b>CO2:</b> Understand the ecology of individual, population, community and ecosystem. <b>CO3:</b> Describe composition and dynamics of population and community of biotic species and Examine in detail the structure and functions of ecosystem. <b>CO4:</b> Systematically understand the concept of biodiversity its vital role and services. <b>CO5:</b> Identify the importance of biodiversity. <b>CO6:</b> Identify the threats to biodiversity. <b>CO 7:</b> Get acquainted with techniques and indices related to measurement of biodiversity <b>CO8:</b> Appreciate the need of biodiversity

				conservation in the current scenario and understand the methods and traditional practices for conservation of biodiversity.
4.	II	ENV-G-CC/GE-2-2-P Full Marks: 30 Credit : 2 (Practical)	ECOLOGY AND BIODIVERSITY	<b>CO1:</b> Enhance their level of understanding about the process of ecological science in field conditions and develop skills in utilizing techniques for estimation of biodiversity of an ecosystem.
5.	III	ENV-G-CC/GE-3-3-TH Full Marks: 50 Credit : 4	CHEMISTRY OF THE ENVIRONMENT	<b>CO1:</b> Understand comprehensively the concept of Molecular weight, Equivalent Weight, Molarity, Normality, Oxidation and Reduction Reactions; Metals and non-metals; Aromatic & Aliphatic compounds, Saturated and unsaturated hydrocarbons stoichiometry, chemical equilibrium and Acid-base reactions  <b>CO2:</b> Understand comprehensively the chemistry of water, air and soil and anthropogenic influence in alteration of the above.
6.	III	ENV-G-CC/GE-3-3-P Full Marks: 30 Credit : 2 (Practical)	CHEMISTRY OF THE ENVIRONMENT	<b>CO1:</b> Estimate water and soil quality parameters
7.	III	ENV-G-SEC-3-A1-TH Full Marks: 80 Credit : 2	ENVIRONMENTAL LAWS AND POLICY, ENVIRONMENTAL AUDIT AND EIA	<b>CO1:</b> Understand the Provision of Indian Constitution related to environmental protection and fundamental rights.  <b>CO2:</b> Appreciate the policies related to forest and environment in India  <b>CO3:</b> Understand comprehensively the pollution prevention and control laws in India and also laws related to protection of wildlife, forest and biodiversity in India.  <b>CO4:</b> Acquire detailed knowledge on scope, objective and steps of Environmental Impact Assessment (EIA) and Environmental audit
8.	IV	ENV-G-CC/GE-4-4-TH Full Marks: 50 Credit : 4	ENVIRONMENTAL PHYSICS AND METEOROLOGY	<b>CO1:</b> Understand comprehensively the fundamental of thermodynamics and Energy equilibrium between biotic and abiotic environmental component

				<p><b>CO2:</b> Understand comprehensively the concept of radiation physics and various techniques related to environmental physics</p> <p><b>CO3 :</b> Acquire basic knowledge on climatologically parameters for environmental study</p>
9.	IV	<p><b>ENV-G-CC/GE-4-4-P</b>  <b>Full Marks: 30</b>  <b>Credit : 2</b>  <b>(Practical)</b></p>	ENVIRONMENTAL PHYSICS AND METEOROLOGY	<p><b>CO1:</b> Record meteorological parameters such as wind speed, relative humidity, atmospheric pressure, rainfall, insolation and light intensity</p> <p><b>CO2:</b> Understand the functioning of Weather station following visit to Weather station.</p>
10.	IV	<p><b>ENV-G-SEC-4-B1-TH</b>  <b>Full Marks: 80</b>  <b>Credit : 2</b></p>	APPLICATIONS OF ENVIRONMENTAL BIOTECHNOLOGY	<p><b>CO1:</b> Understand comprehensively the principles governing different biotechnological methods.</p> <p><b>CO2:</b> Describe application of biotechnology in medicine and industry.</p> <p><b>CO3:</b> Describe the role of biotechnology in wastewater treatment, solid waste management.</p> <p><b>CO4:</b> Understand in details all facets of bioremediation and phytoremediation</p> <p><b>CO5 :</b> Understand ecologically safe products such as PGPR bacteria, bio-fertilizers etc. and processes including Integrated pest Management</p> <p><b>CO6:</b> Acquire in depth knowledge of GM and GMOs and its pros and cons. and to have an functional understanding of Biosafety Protocol.</p>

**ENVIRONMENTAL SCIENCE (HONOURS)**

**B.Sc 3<sup>rd</sup> year (1+1+1 System)**

**COURSE OUTCOMES**

Sl No.	Year	Course Code, ENVA Paper Code	Course Name	Course Outcomes  After Completion of the following Courses Students will be able to-
1.	3 <sup>rd</sup>	VA	FUNDAMENTAL OF NATURAL RESOURCE	<b>CO1:</b> Describe the different types of resources present in Earth along with their complexity, issues and sustainability  <b>CO2:</b> Learn the different management tools and techniques for sustainable utilization and conservation of natural resources.  <b>CO3:</b> Acquire knowledge in depth about principles, methods and risk analysis to harvest renewable resources for energy production and consumption.
2.	3 <sup>rd</sup>	VB	ENVIRONMENTAL MANAGEMENT	<b>CO1:</b> Understand comprehensively the concept and function of management  <b>CO2:</b> Learn the Environmental Management System, ISO, Business Charter for Sustainable development.  <b>CO3:</b> Describe the global environmental problems and appreciate national and international efforts of environmental protection.  <b>CO4:</b> Describe the basic principle of Ganga Action Plan and Yamuna Action Plan.  <b>CO5:</b> Acquire knowledge in depth about rainwater harvesting, wasteland reclamation and joint forest management.  <b>CO6:</b> Describe in detail the different types of solid waste management.  <b>CO7:</b> Describe in Environmental Management Plan, Disaster Management Plan and Green belt.
				Contd...

<b>3.</b>	<b>3rd</b>	<b>VI A</b>	ENVIRONMENTAL LAWS POLICY AND EIA	<p><b>CO1:</b> Understand the Provision of Indian Constitution related to environmental protection and fundamental rights.</p> <p><b>CO2:</b> Appreciate the policies related to forest and environment in India</p> <p><b>CO3:</b> Understand comprehensively the pollution prevention and control laws in India and also laws related to protection of wildlife, forest and biodiversity in India.</p> <p><b>CO4:</b> Acquire detailed knowledge on scope, objective, steps and methodologies of Environmental Impact Assessment (EIA)</p>
<b>4.</b>	<b>3rd</b>	<b>VI B</b>	ENVIRONMENTAL HEALTH ACCOUNTING AND AUDITING	<p><b>CO1:</b> Understand the concept of Environmental health and principle and methodologies of epidemiology.</p> <p><b>CO2:</b> Understand the concept of different aspects related to disease along with air borne, water borne, soil borne and vector borne diseases.</p> <p><b>CO3:</b> Have elementary idea about immunology.</p> <p><b>CO4:</b> Acquire detailed knowledge on health programmes in India.</p> <p><b>CO5:</b> Acquire detailed knowledge on Environmental accounting and its role towards sustainability.</p> <p><b>CO6:</b> Acquire detailed knowledge on scope, objective, steps and methodologies of Environmental audit (EIA)</p>
<b>5.</b>	<b>3rd</b>	<b>VII A</b>	ENVIRONMENTAL POLLUTION	<p><b>CO1:</b> Understand environmental pollution and degradation of environmental quality, with emphasis on causes, pathways, risks, control and remediation.</p> <p><b>CO2:</b> Understand the physical, chemical and biological processes involved during contamination of air, water and soil is essential to effectively monitor and control the effects of pollution.</p> <p><b>CO3:</b> Describe the complex relationships between environmental factors and human health, taking into account multiple pathways and interactions is assessed in a broader spatial and socio-economic context.</p>

6.	3rd	VIIIB	TOXICOLOGY OF POLLUTANTS AND WASTES	<p><b>CO1:</b> Understand in detail the concepts and different aspects of toxicology including Phase I and II reactions, LC<sub>50</sub>, LD<sub>50</sub> and bioassay</p> <p><b>CO2:</b> Understand the toxicity of toxicity of inorganic and organic pollutants in the context of environment and human health.</p> <p><b>CO3:</b> Understand the health effects associated with noise pollution, radioactive pollutants, indoor air pollutants and thermal pollution along with treatment or minimization or safety measures linked to it.</p>
7.	3rd	VIII	PRACTICAL	<p><b>CO1:</b> Perform the preparation related to study of metaphase chromosome of mice, meiotic stage of grasshopper testis, and nuclear abnormality in fish and interpret it accordingly.</p> <p><b>CO2:</b> To study aberrant chromosomes and perform isolation of DNA from cell.</p> <p><b>CO3:</b> Identify different fauna associated with disease and describe its epidemiological impact.</p> <p><b>CO4:</b> Understand and record the waste management techniques from field visit.</p>

**ENVIRONMENTAL SCIENCE (GENERAL)**

**B.Sc 3<sup>rd</sup> year (1+1+1 System)**

**COURSE OUTCOMES**

Sl No.	Year	Course Code, ENVG Paper Code	Course Name	Course Outcomes  After Completion of the following Courses Students will be able to-
1.	3rd	IV	ENVIRONMENTAL POLLUTION, ENVIRONMENTAL HEALTH AND ENVIRONMENTAL MANAGEMENT	<p><b>CO1:</b> Understand systematically the classification of pollutants and different aspects of air pollution, water pollution, noise pollution, pesticide pollution and indoor air pollution.</p> <p><b>CO2:</b> Understand comprehensively the concept environmental toxicology and different aspects associated with it.</p> <p><b>CO3:</b> Understand the concept of Environmental health and principle and methodologies of epidemiology.</p> <p><b>CO4:</b> Understand comprehensively the concept and function of Environmental management and sustainable development.</p> <p><b>CO5:</b> Acquire knowledge in depth about rainwater harvesting and traditional water conservation methods.</p>
2.	3rd	IV B	PRACTICAL	<p><b>CO1:</b> Analyse dust fall per unit area, Dissolved oxygen, CO<sub>2</sub> and hardness of water samples and interpret it accordingly.</p> <p><b>CO2:</b> Develop skills to collect and study biodiversity of bottom fauna of pond (Field conditions) and interpret it accordingly in the context of contamination of pond with different pollutants.</p>

## **COURSE OUTCOMES**

### **ENVIRONMENTAL SCIENCE (HONOURS)**

#### **Semester- V, VI (Under CBCS)**

<b>Sl No.</b>	<b>Semester</b>	<b>Course Code, ENVA Paper Code</b>	<b>Course Name</b>	<b>Unit</b>	<b>Course Outcomes After completion of the following courses students will be able to-</b>
<b>1.</b>	<b>V</b>	<b>ENV-A-CC-5-11-TH Full Marks: 50 Credit : 4</b>	<b>BIODIVERSITY AND CONSERVATION BIOLOGY</b>	<b>1</b>	Understand the basic patterns of global biodiversity and its distribution along with learning the tools and techniques for estimation, monitoring and conserving biodiversity.
				<b>2</b>	Focuses on the various significance and values of the biodiversity and their interactions for proper performing of the ecosystems
				<b>3</b>	Describe the various natural and other factors coupled with trends in human population growth that leads to loss of biodiversity and its consequences.
				<b>4</b>	Understand the priorities and techniques of conservation of biodiversity.  Develops the idea of traditional knowledge and community-based conservation practices for biodiversity over time.  Discuss different strategies adopted globally for conservation of species.
				<b>5</b>	Develop detailed knowledge on Biodiversity profile, Forest types, Forest cover, Zoogeographic and Phyogeographic zones of India.  Develop detailed knowledge on status of protected areas of India and various aspects of National Biodiversity Action Plan.

2.	V	ENV-A-CC-5-11-P (Practical) Full Marks: 30 Credit : 2	BIODIVERSITY AND CONSERVATION BIOLOGY	Prac.	Recognize the different tools and techniques in estimating, monitoring biodiversity of an ecosystem.
3.	V	ENV-A-CC-5-12-TH Full Marks: 50 Credit : 4	ORGANISMAL AND EVOLUTIONARY BIOLOGY	1	Understand the Origin of life on Earth according to the geological time scale and the different concepts of evolution of species as key to understanding the natural world specially evolution of humans.  Explain the main forces of evolution
				2	Understand the evolution of unicellular life on Earth including origin of cells, abiotic synthesis of organic monomers and polymers Oparin-Haldane hypothesis and Urey Miller Experiment.
				3	Understand the Biogeographic evidences of evolution
				4	Understand evolution vis-à-vis molecular levels. Neutral evolution; molecular divergence and molecular clocks; molecular tools in phylogeny, classification and identification; protein and nucleotide sequence analysis.
				5	Explain the genetic structure of populations, changes in genetic composition resulting from various factors and the basic methods of analyzing the evolutionary relationships between species.
4.	V	ENV-A-CC-5-12-P (Practical) Full Marks: 30 Credit : 2	ORGANISMAL AND EVOLUTIONARY BIOLOGY	Prac.	Enumerate the genetic structure of population of species.  Solve numerical problems on Pedigree.  Estimate protein content of samples by Lowry method.  Estimate Glucose content of samples by Anthrone method.

5.	V	ENV-A-DSE-A-5-1-TH Full Marks: 50 Credit : 4	ENERGY AND ENVIRONMENT	1	To have a comprehensive understanding of Global energy resources their distribution and availability.  Gain knowledge on past, present, and future technologies for capturing and integrating energy resources into our energy infrastructure
				2	Understand Global energy demand, energy demand and use in domestic, industrial, agriculture and transportation sector, energy demand and its relation to World economy and energy subsidies.
				3	Understand impacts of energy use on the environment at local to global scales, energy over-consumption, social inequalities related to energy production, distribution, and use and energy
				4	Acquire in depth knowledge on current and future energy use patterns in the world and in India, alternative sources as green energy, need for energy efficiency, energy conservation and sustainability, action strategies for sustainable energy management from a future perspective
6.	V	ENV-A-DSE-A-5-1-P (Practical) Full Marks: 30 Credit : 2	ENERGY AND ENVIRONMENT	Prac.	Calculate and interpret energy efficiencies Conduct energy audit of domestic unit
7.	V	ENV-A-DSE-B-5-2-TH Full Marks: 50 Credit : 4	SOLID WASTE MANAGEMENT	1	Understand the basic concepts of solid waste classification and management
				2	Primarily deal with the ill-effects of various solid waste on life and environment.
				3	Focus on various strategies employed beginning from source generation to waste disposal in a system of
				4	Describe the various industrial techniques practiced for remediating wastes in water and air.

				5	Deal with the treatment methods of refuse processing, recovery, recycle and reuse.
				6	Conceptualize the sustainable management of waste and converting them into something useful such as energy.
				7	Encompass the sustainable practices for waste management and their significance in the environment.
				8	Describe the various legislative policies in India implemented to reduce the various kinds of wastes.
8.	V	<b>ENV-A-DSE-B-5-2-P (Practical) Full Marks: 30 Credit : 2</b>	SOLID WASTE MANAGEMENT	Prac.	Understand the real-life strategies practiced at a typical solid waste management site through Field Visit
<b>VITH SEMESTER (HONS.)</b>					
9.	VI	<b>ENV-A-CC-6-13-TH Full Marks: 50 Credit : 4</b>	ENVIRONMENTAL POLLUTION AND HUMAN HEALTH	1	Define the various properties pollution and pollutants, principles of environmental pollution and its relationship to the ecosystem
				2	Understand the sources of various air pollutants and complex interactions of man, health, and the environment.
				3	Deal with the various polluting agents in the aquatic ecosystem, their sources, effects, estimation parameters and mitigation measures that is practiced.
				4	Gain in depth knowledge on the factors causing soil degradation and strategies to combat soil pollution.
				5	Gain in depth knowledge on the sources and impact of noise pollution along with the control measures.

				6	Identify the common, distinguished radioactive and thermal pollutants and their hazards to the life and environment.
				7	Understand the interactions of marine environment with the pollutants and challenges and management techniques to revive damaged coastal
				8	Learn the various techniques and instrumentations employed for proper detection and monitoring of pollutants and their successive remediation
10.	VI	<b>ENV-A-CC-6-13-P (Practical) Full Marks: 30 Credit : 2</b>	ENVIRONMENTAL POLLUTION AND HUMAN HEALTH	Prac.	To perform the analysis of BOD, COD, Noise (dB(A), SPM, RSPM, Dust fall rate, Soil respiration.
11.	VI	<b>ENV-A-CC-6-14-TH Full Marks: 50 Credit : 4</b>	NATURAL RESOURCE MANAGEMENT AND SUSTAINABILITY	1	To have a comprehensive Understanding of natural resource their classification and availability along with ecological, social and economic dimension of resource
				2	Gain in depth knowledge on the attributes, significance, complexity and issues of natural resources with their management practices for conservation and sustainability.
				3	Gain in depth knowledge on mineral resources their exploration and associated environmental effects.
				4	Gain in depth knowledge on various aspects of energy resources of the World, application of green technology, future energy options with challenges and energy
				5	Understand in detail the various approaches and strategies of resource management.

12.	VI	<b>ENV-A-CC-6-14-P (Practical) Full Marks: 30 Credit : 2</b>	NATURAL RESOURCE MANAGEMENT AND SUSTAINABILITY	Prac.	Prepare project work on various aspects of resource and its management.
13.	VI	<b>ENV-A-DSE-B-6-1-TH Full Marks: 50 Credit : 4</b>	NATURAL HAZARDS AND DISASTER MANAGEMENT	1	Understand the various concepts of hazard, risk and disaster.
				2	Discuss about the causes and effects of various ongoing natural hazards and provides a knowledge on techniques employed for predicting such disasters to reduce extent of "
				3	Gain insight into the impact of activities due to human population growth on the environment including some special case studies of India as well as the world.
				4	To have a comprehensive understanding on various aspects of Risk and vulnerability
				5	Understand the concept, role and importance of mitigation and preparedness in disaster management
				6	Gain in depth knowledge on Disaster Management Framework of India along with certain case studies.
14.	VI	<b>ENV-A-DSE-B-6-1-P (Practical) Full Marks: 30 Credit : 2</b>	NATURAL HAZARDS AND DISASTER MANAGEMENT	Prac.	Learn preparation of disaster management plan of flood, earthquake, cyclone and fire outbreak
15.	VI	<b>ENV-A-DSE-B-6-3-TH Full Marks: 50 Credit : 4</b>	GREEN TECHNOLOGIES	1	Understand the concepts of Green buildings, Eco-mark certification, Green planning, Green cities and Green belts in detail
				2	Understand the concepts of green technologies to acquire knowledge regarding principles of energy efficient technologies and recognizing the methods of reducing CO <sub>2</sub> levels in atmosphere.

				<b>3</b>	To have a comprehensive understanding about the concepts, principle and applications of green chemistry.
				<b>5</b>	Identify the innovative and eco-friendly techniques for sustainable management of resources and wastes.
<b>16.</b>	<b>VI</b>	<b>ENV-A-DSE-B-6-3-P (Practical) Full Marks: 50 Credit : 2</b>	<b>GREEN TECHNOLOGIES</b>	Prac.	Analyse the stability of vermicompost by compost respiration method  Perform analysis of rainwater harvesting potential in urban/rural catchments

### **ENVIRONMENTAL SCIENCE (GENERAL)**

#### **Semester-V, VI (Under CBCS)**

#### **COURSE OUTCOMES**

<b>Sl No.</b>	<b>Semester</b>	<b>Course Code, ENVG Paper Code</b>	<b>Course Name</b>	<b>Course Outcomes</b>
				<b>After Completion of the following Courses Students will be able to-</b>
<b>1.</b>	<b>V</b>	<b>DSE A1 (Theory) Full Marks: 50 Credit : 4</b>	<b>ENERGY AND ENVIRONMENT</b>	<b>CO1:</b> To have a comprehensive understanding of Global energy resources their classification, distribution and availability.  <b>CO2:</b> Understand Global energy demand, along with energy demand and use in domestic, industrial, agriculture and transportation sector.  <b>CO3:</b> Gain in depth knowledge about conventional and non-conventional energy resources, energy efficiency and concept of sustainable energy management.  <b>CO4:</b> Learn Concept, purpose and methodology of energy audit.
<b>2.</b>	<b>V</b>	<b>DSE A1 (Practical) Full Marks: 30 Credit : 2</b>	<b>ENERGY AND ENVIRONMENT</b>	<b>CO1:</b> Determine energy efficiencies <b>CO2:</b> Learn and prepare report on Energy audit of a domestic unit.

				<p><b>CO3:</b> Demonstrate water conservation techniques, use of solar devices, photo-cells, wind-mills and biogas plant.</p> <p><b>CO4:</b> Learn and prepare report on Energy Plantation</p>
3.	VI	<p><b>DSE B1 (Theory)</b>  <b>Full Marks: 50</b>  <b>Credit : 4</b></p>	NATURAL HAZARD AND DISASTER MANAGEMENT	<p><b>CO1:</b> Understand the concepts of hazard, risk and disaster.</p> <p><b>CO2:</b> Understand the various aspects of different natural hazards in detail.</p> <p><b>CO3:</b> Gain insight into the impact of anthropogenic activities on the environment including some special case studies of India as well as the world.</p> <p><b>CO4:</b> Systematically understand the concept disaster management cycle along with disaster management plan</p>
4.	VI	<p><b>DSE B1 (Practical)</b>  <b>Full Marks: 30</b>  <b>Credit : 2</b></p>	NATURAL HAZARD AND DISASTER MANAGEMENT	<p><b>CO1:</b> Prepare report including disaster preparedness plan citing case studies for different natural and anthropogenic disasters along with powerpoint/poster presentation on the same.</p>

Netaji Nagar College for Women. Kol- 92

Dept. of Film Studies (General)

Full Marks= 100, Credit= 6 (th-4, pr-2)

C.B.C.S. Degree Programme. B.A Degree Course

### **PROGRAMME SPECIFIC OUTCOMES:**

After graduation the student will be able to learn-

1. To develop the sense of critical thinking and creative writing.
2. To apply the skills of directing, editing and field shooting.
3. To learn how to write a scriptwriting and Screenplay for cinema
4. To learn how to use camera
5. Students will learn a broad knowledge of Indian cinema and world Cinema.
6. To learn how to video and sound editing.

**Semester = I, Course Code= FMSG CC/GE I. Course Name. = Film Language & Cinema's Journey from Primitive to Narrative.**

#### **Course Outcomes:**

1. Students will be able to know pre cinema toys and machines, primary history of cinema.
2. Students will be able to understand cinematography, editing sound and composition.
3. Students will demonstrate that they understand the pre production, production and post production film making process.

**Semester= II, Course Code= FMSG CC/GE II. Course Name=History: World Cin**

#### **CourseOutcomes:**

1. Students will be able to know the basic concepts like German Expressionism. Soviet Montage, and Surrealism.
2. Students will be able to understand what is the Italian Neo- Realism and French New Wave Cinema.

**Semester= III, Course Code= FMSG III/GE III, Course Name.= Indian Cinema**

#### **Course Outcomes:**

1. Students will be able to analyse the Indian Cinema.
2. Students will be able to know the history of Indian Studio system.
3. Students will be able to know many of Indian directors names and their works .
4. Students will be able to basic history of still photography.

**Semester= IV, Course Code= FMSG CCIV/GE IV, Course Name.= Documentary**

**Course Outcomes:**

1. An understanding of the major history and theory of documentary film .
2. Students will be able to know some world famous documentary film directors names and their works.

**B. A 3<sup>RD</sup> YEAR , Film Studies General , under 1+1+1 system . paper = 4<sup>th</sup> paper**

**Course Outcomes:**

1. Students will be able to understand film theories and their relation to technology history and aesthetics.
2. Students will be able to know basic concepts film script writing.
3. Students will be able to understand many of film directors names and their works.

Netaji Nagar College For Women. Kol 92

Dept. of Film Studies ( General)

Full Marks= 100, Credit= 6 ( th-4. pr-2)

C.B.C.S. Degree Programme.

**Semester= V, Course Code= FMSG, PAPER- DSE-A, Course Name= FILM THEORIES AND STUDY OF POST NEOREALIST ITALIAN CINEMA.**

**Course Outcome:**

1. Students will be able to understand film theories like realism, montage theory and semiotics.
2. Students will be able to know about post neorealist Italian cinema .
3. Students will be able to know many directors names and their works.

**Semester= VI, Course Code= FMSG, PAPER- DSE-B, Course Name= CENSORSHIP; STUDY OF LATIN AMERICAN CINEMA**

**Course Outcome:**

1. Students will be able to understand the censorship laws in india.
2. Students will be able to know many Indian directors names and their cinema those are selected for censorship.
3. Students will be able to know about latin American cinema's history.

**Netaji Nagar College for Women, Kolkata-92**  
**Department of Food and Nutrition**  
**Programme Specific Outcome of Food and Nutrition (Hon.)**

**Subject Code: FNTA**

After successful completion of B.Sc. Food and Nutrition (Hons.) course under CBCS system under University of Calcutta, students can have a thorough knowledge and detail understanding of the areas of food science and nutrition science as mentioned in the syllabus of B.Sc. (Hons.) programme. They get exposed to both theoretical and practical knowledge and this will help them in their future higher studies, research activities, jobs, personality building and in other areas like their own health concerns.

The important domains covered by the course are as follows:

1. Basic Food Science
2. Human Physiology
3. Human Nutrition
4. Community Nutrition
5. Food Commodities
6. Diet Therapy
7. Nutritional Biochemistry
8. Food Microbiology
9. Food Preservation
10. Public Health
11. Mushroom Culture
12. Diet Counseling and Patient Care
13. Geriatric Nutrition
14. Food Packaging
15. Geriatric nutrition
16. Food Fermentation
17. Sports Nutrition
18. Food Service Management
19. Nutrition and Health Education
20. Bakery Science

After gathering the B.Sc. degree, students can progress themselves in higher education or they can apply for jobs. Career progress options covered by the programme are as follows:

1. Taking admission in master degree programme in various universities.
2. Taking admission in diploma in dietetics in various universities.
3. After post-graduation course can explore in the research field as Ph.D scholar, research associates and technical staff.
4. After completion of B.Sc./ M.Sc. programme students can engage themselves as a nutritionist or clinical dietitian in various government and private hospitals, other health sectors, NGOs, government services like NRHM.

5. Students can find their jobs in academics as a teacher or in various food and pharmaceutical companies as well as in hotels as nutrition advisors.
6. Students can start their job career as a freelance nutritionist.

Apart from job careers; after completion this course successfully a student will get a great deal of scientific knowledge about foods, health and hygiene, various disease and their management, healthy habits and other health related issues. This will help them personally and publicly. They can take care of their own health as well as their family member's health. They can contribute in the community to make it healthy and free from malnutrition.

Netaji Nagar College for Women, Kolkata-92

Department of Food and Nutrition

Course Outcome of Food and Nutrition (Hon.)

Full Marks - 100, Credit - 6 (Th: 4 + P2)

Sl	Semester	Course Code FNTA	Course Name	Course Outcome
1.	Sem-1	CC-1-1	Basic Food and Science-I	<b>Theory:</b> 1. Getting Idea of food science in various ways and have an clear idea on food components 2. Getting idea about carbohydrate chemistry, sources, functions, deficiency and excess. 3. Getting idea about protein chemistry, sources, functions, deficiency and excess. 4. Getting idea about lipid chemistry, sources, functions, deficiency and excess.  <b>Practical:</b> 1. Get practical knowledge on identification of mono, di and polysaccharides. 2. Get practical knowledge on identification of proteins and glycerol.

		CC-1-2	Human Physiology -I	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To understand the basic concepts of unit of Life and structure and functions of cell with special reference to Plasma membrane (Fluid Mosaic Model), Mitochondria, Ribosome, Endoplasmic reticulum, Nucleus (nuclear membrane, nuclear chromatin and nucleolus), nucleotide, homeostasis, positive and negative feedback mechanisms.</li> <li>2. To have a brief idea of the circulatory and cardiovascular system: blood and its composition, formed elements, Blood groups, Mechanism of blood coagulation, introduction to immune system, erythropoiesis and anaemia, structure and functions of heart, cardiac cycle, cardiac output, blood pressure and its regulation.</li> <li>3. To have clear concepts of digestive system: structure and functions of G.I. tract, process of digestion and absorption of food, structure and functions of liver, gallbladder and pancreas.</li> <li>4. To gather knowledge about respiratory system: structure of lungs and gaseous exchange (oxygen and carbon dioxide transport).</li> <li>5. To have an idea about musculoskeletal system: formation and functions of muscles, bones and teeth. Muscle energetic, Isometric and isotonic muscle contraction.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. To determine pulse rate in Resting condition and after exercise (30 beats/10 beats method)</li> <li>2. To determine blood pressure by Sphygmomanometer (Auscultatory method).</li> <li>3. To measure Peak Expiratory flow rate (By spirometer)</li> <li>4. To determine Bleeding Time (BT) and Clotting Time (CT).</li> <li>5. To detect blood group (Slide method).</li> <li>6. To measure of Haemoglobin level (Sahli's or Drabkin method)</li> </ol>
--	--	--------	---------------------	---

2.	Sem-2	CC-2-3	Basic Food and Science-II	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. Getting Idea of food science in various ways and have an clear idea on food components</li> <li>2. Getting idea about vitamins and its sources, functions, deficiency and excess.</li> <li>3. Getting idea about minerals and its sources, functions, deficiency and excess.</li> <li>4. Getting idea about role of water in human system and sources, functions, deficiency, excess and regulation.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. Get practical knowledge on ash content and moisture content in food.</li> <li>2. Get practical knowledge on determination of calcium, iron and vitamin c content in food.</li> </ol>
----	-------	--------	---------------------------	---

		CC-2-4	Human Physiology -II	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To understand excretory system, structure and function of skin, regulation of body temperature, structure and functions of kidney in special reference to nephron and physiology of urine formation.</li> <li>2. To get a brief idea on reproductive system which includes structure and functions of gonads, concept on menstrual cycle, pregnancy, parturition, lactation, menopause and also the process of spermatogenesis and oogenesis.</li> <li>3. To gather knowledge about nervous system including concept on sympathetic and parasympathetic nervous system, brief anatomy and functions of cerebrum, cerebellum, hypothalamus and neuron, synapse and synaptic transmission, reflexes, special senses.</li> <li>4. To have a perception on endocrine system: structure and functions of pituitary, thyroid, parathyroid and adrenal gland, structure and functions of pancreas.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. To perform Harvard Step test</li> <li>2. To identify histological slides (Lung, Liver, Kidney, Small intestine, Stomach, Thyroid, Adrenal, Pancreas, Testis, Ovary and Muscle of mammals) along with their specific characteristics.</li> <li>3. To know how to perform qualitative estimation of glucose, acetone in urine.</li> <li>4. To make a perfect blood film and its staining procedures and able to identify different types of blood cells.</li> </ol>
--	--	--------	----------------------	---

3.	Sem-3	CC-3-5	Human Nutrition-I	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. Getting idea about basic nutrition, the role of nutrition in different stages of life.</li> <li>2. Getting idea about growth and development of human being</li> <li>3. Getting idea about growth monitoring in different stages of life</li> <li>4. Getting idea about Recommended Dietary Allowances and consumption unit</li> <li>5. Getting idea about energy in human nutrition</li> </ol> <p><b>Practical:</b></p> <ul style="list-style-type: none"> <li>• Getting idea of various processes involved in cooking like steaming, frying, grilling, pressure cooking, microwave cooking etc.</li> <li>• Having concepts of weights &amp; measures of raw and cooked food stuffs involving eye estimation of the same.</li> <li>• Planning and preparation of foods by combining different food groups and analyzing their significance in relation to health.</li> </ul> <p>Planning and preparation of supplementary foods for different age groups and low cost diets for malnourished children with their nutritional significance</p>
		CC-3-6	Community Nutrition	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. Understanding basic concept of community, types, health, factors affecting community health, nutritional surveillance and its importance.</li> <li>2. Understanding the different procedure of assessment of nutritional status by anthropometric assessment, biochemical assessment, clinical sign &amp; symptoms and diet survey and its importance in community nutrition.</li> <li>3. Understanding about the aims and objectives of various national and international agencies and their roles in community health.</li> <li>4. Elaborating the different nutrition intervention programme in India to combat malnutrition.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. Acquiring the ability to assess the nutritional status of children and how to interpret the data by using WHO growth standard and by using WHO BMI cut off in case of adults.</li> <li>2. Understanding the importance of growth chart and how to use it.</li> <li>3. Understanding of to detect different signs and symptoms, that are related to various nutritional deficiencies. Understand the difference between signs and symptoms.</li> <li>4. Understanding how to conduct diet survey.</li> </ol>

		CC-3-7	Food Commodities	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>Understanding structure, classification, composition, nutritional aspects, selection, storage procedures, spoilage and products of – Cereals &amp; Millets, Pulses &amp; Legumes, Milk &amp; Milk Products, Eggs, Meat, Fish &amp; Poultry, Vegetables &amp; Fruits.</li> <li>Types, manufacture, selection, storage, preservation and role in cookery of sugar &amp; sugar products, fats &amp; oils.</li> <li>Having concept of types, storage, processing and uses of raising and leavening agents, food adjuncts (spices, condiments, herbs etc.), convenience foods, salt &amp; beverages.</li> </ul> <p><b>Practical:</b> Getting idea about food adulteration and common adulterants present in food stuffs like milk, edible oil, coloured sweet, turmeric powder, tea etc.</p>
		SEC-A2	Food service management	<p>1. Getting Idea of food service industry in various ways and have an clear idea on different components of the service units.</p> <p>1. To understand the different types &amp; styles of food service with their characteristics.</p> <p>2. Description of the different steps involved in food service.</p> <p>3. Understanding kitchen layout- lightning, ventilation, working heights, proper hygiene in preparation, serving and storing unit.</p> <p>4. Understanding the importance of sanitation, hygiene and personal hygiene in food service area and how to handle the foods.</p> <p>5. To plan different types of menu provided in different food service institutions. Understand the procedure the menu planning and what points should be kept in mind while plan a menu.</p>
4.	Sem-4	CC-4-8	Human Nutrition - II	<p><b>Theory:</b></p> <p>1. Getting idea about basic nutrition in infancy, prerschool, school children and adolescents.</p> <p>2. Getting idea about role of nutrition and various other issues during pregnancy and lactation.</p> <p><b>Practical:</b> Planning preparation and calculation of the nutrients provided by meals for different age group with special reference to different physiological conditions like infancy, preschool children, school children, adolescent period, adults, pregnancy, lactation and old age.</p>

		CC-4-9	Diet Therapy-I	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>• Understanding the concepts objectives and principles of diet therapy, therapeutic adaptations of normal diet and classification, composition and implication of therapeutic diets.</li> <li>• Assessing patients need (diet counselling) through team approach of health care.</li> <li>• Having the concept of routine hospital diets – regular, light, soft, fluid, parenteral and internal feeding.</li> <li>• Understanding the principles and management of diet for different febrile conditions like influenza, malaria and typhoid.</li> <li>• Understanding etiology, symptoms and management of diseases of stomach, intestine, liver &amp; biliary system.</li> <li>• Having the general concept, etiology, classification and dietary management of nutritional anaemia.</li> </ul> <p><b>Practical:</b> Planning, preparation and calculation of nutritive value of various nutrients obtained from normal diets, fluid diet, soft/semi-solid diet and diets for diseases like peptic ulcer, viral hepatitis and anaemia.</p>
--	--	--------	----------------	---

		CC-4-10	Nutritional Biochemistry-I	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To have an introductory idea of biochemistry from its definition, objectives, scope and inter relationship between biochemistry and other biological science.</li> <li>2. To have concept about enzymes its definition, types and classification of enzymes, definition and types of coenzymes, functions of coenzymes and cofactors, Specificity of enzymes, Isozymes, brief idea on enzyme kinetics including factors affecting enzyme action, velocity of enzyme catalysed reactions, regulations of enzyme activity, zymogen, allosteric enzymes, enzyme inhibition.</li> <li>3. To understand the mechanism of intermediary metabolism: Carbohydrate Metabolism, Glycolysis, TCA cycle &amp; energy generation, HMP Shunt pathway, gluconeogenesis, glycogenesis, glycogenolysis, blood sugar regulation.</li> <li>4. To have brief knowledge of lipids and their Oxidation and biosynthesis of fatty acids (saturated &amp; mono-unsaturated), Synthesis and utilization of ketone bodies, Ketosis, fatty livers, Essential Fatty acids, Cholesterol and its clinical significance.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. To know the procedure of Quantitative estimation of Sugars (Glucose, lactose, starch)</li> <li>2. To estimate acid value, iodine value, Saponification value of fats</li> <li>3. To estimate blood glucose</li> <li>4. To estimate serum cholesterol</li> </ol>
		SEC-B1	Nutrition and Health education	<ol style="list-style-type: none"> <li>1. Understanding about basic concept, principles, objectives and importance of nutrition &amp; health education.</li> <li>2. Understanding the different approaches of health and nutrition &amp; health education- individual, group, mass basis.</li> <li>3. Understanding the different methods of giving nutrition and health education and what are the different tools that are used in these methods.</li> <li>4. Understanding the procedure to conduct nutrition education programme in a community. Identify the needs of the community and plan the programme according that.</li> <li>5. Understanding the different nutrition problem that are prevalent in India and how to aware and how to fight against these by halth and nutrition education.</li> </ol>

5.	Sem-5	CC-5-11	Diet therapy-II	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>To manage obesity and underweight understanding etiology, assessment, prevention, treatment and complications.</li> <li>To gain thorough knowledge of diabetes mellitus, considering its classification, symptoms, diagnosis, management-insulin therapy and oral hypoglycemic agents, monitoring, nutritional care, special foods and artificial sweetness.</li> <li>Understanding CVD, emphasizing on hypertension, myocardial infarction, ischemia, angina pectoris, heart attack and stroke, atherosclerosis and hyperlipidaemias.</li> <li>To know renal diseases including etiology symptom and dietary management of glomerulonephritis, nephrotic syndrome, uremia and nephrolithiasis along with use of sodium-potassium exchange list.</li> </ul> <p><b>Practical:</b></p> <ul style="list-style-type: none"> <li>Planning and preparation of diets for:- <ol style="list-style-type: none"> <li>Obesity and Underweight.</li> <li>Diabetes Mellitus</li> <li>Hypertension and atherosclerosis</li> <li>Acute and chronic glomerulonephritis.</li> </ol> </li> </ul>
		CC-5-12	Nutritional biochemistry-II	<p><b>Theory:</b></p> <p>To have an idea about biological membrane, diffusion, nucleic acid, protein chemistry, vitamin chemistry biochemical role of minerals.</p> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>Getting practical knowledge on qualitative analysis of amino acids and proteins.</li> <li>Getting practical knowledge on estimation of serum protein, creatinine, urea, iron, calcium and phosphorus.</li> </ol>
		DSE-A-5-1	Public health	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>To have an idea on health, disease and public health</li> <li>To have an idea about immunization</li> <li>To have an idea about community water and waste management</li> <li>To have an idea about concept of epidemiology</li> <li>To have an idea about communicable and infective disease control</li> <li>To have an idea about public health hazards due to contaminated foods</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>Preparation of audio visual aids like charts, posters, models related to health and nutrition education</li> <li>Formulation and preparation of low cost and medium cost nutritious/ supplementary recipe.</li> <li>Field visit ( health centre, immunization centre, ICDS, MCH centres, NGO's etc.)</li> </ol>

		DSE-B-5-1	Food safety and quality control	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To have an idea of food safety, factors affecting food safety, food safety hazards (physical. Chemical, biological).</li> <li>2. To have an idea food borne infections and food borne intoxication and difference between them. Some important food borne diseases like botulism, staphylococcal infection, salmonellosis etc. and method of prevention.</li> <li>3. To have an idea food poisoning, seafood and shellfish poisoning, micotoxins, aflatoxins.</li> <li>4. To have an idea about how to control food hazards, control over certain parameters, time, temperature while making food and proper storage of food.</li> <li>5. To have an idea about the importance of maintaince of To have an idea about proper sanitation and hygiene during food preparation, personal hygiene of food handlers.</li> <li>6. To have an idea about concept of GHPs, GMPs, BIS, HACCP, TQM, AGMARK. Voluntary and mandatory certifications. Food laws, FSSAI, role of FSSAI, role of food safety officer and food analyst under FSSAI, risk analysis.</li> </ol> <p><b>Practical:</b></p> <p>Preparation of a project and demonstrate on the above topics.</p>
--	--	-----------	---------------------------------	--

6.	Sem-6	CC-6-13	Food microbiology	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To get an idea of the history of microbiology and importance of micro- organisms in food. Basic concept of bacteria, fungus, virus and their characteristics.</li> <li>2. To understand the process of cultivation of micro-organisms, different types of culture media, method of isolation, serial dilution.</li> <li>3. To understand the sources of micro- organisms in food, food contamination, physical and chemical changes in food due to micro- organisms.</li> <li>4. To understand the procedure to control and destroy micro- organisms by different techniques- sterilization, disinfection. Elaborate the process of food preservation by preventing the growth of micro- organisms in food and by the killing the micro- organisms.</li> <li>5. To have an idea on food spoilage, factors affecting food spoilage. Different kinds of foods like cereals, vegetables, milk &amp; milk product, fish, meat, eggs etc. and how they can be spoiled and responsible micro- organisms of these spoilage.</li> </ol> <p><b>Practical</b></p> <ol style="list-style-type: none"> <li>1. To have a practical knowledge on the different instruments used in microbiology laboratory e.g. autoclave, laminar, hot air oven, incubation chamber, microscope etc.</li> <li>2. To know the procedure of preparing slides for microscopic identification of microorganisms, gram staining</li> <li>3. To know the procedure of preparing different liquid, semisolid and solid culture media for the culture of microorganisms. Composition of different culture media. Idea about differential media.</li> <li>4.To have an idea on the technique of pure culture spread plate, pore plate and streak plate.</li> </ol>
----	-------	---------	-------------------	--

		CC-6-14	Food preservation	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>To know the definition, objectives, principles and different methods of food preservation.</li> <li>To gain thorough knowledge about preserved products like jam, jelly, marmalaid, sauces, pickles, squashes, syrups.</li> <li>Understanding food standards like ISI, AGMARK, FPO, MPO, PFA, FSSAI.</li> </ul> <p><b>Practical:</b></p> <ul style="list-style-type: none"> <li>Food preservation methods – drying, freezing, frying, canning, boiling etc.</li> <li>Aseptic handling and sources of contamination of foods.</li> <li>Preparation of pickles, tomato sauce, chili sauce, jelly, tomato puree, squashes etc.</li> </ul>
		DSE-A-6-4	Geriatric nutrition	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>To understand the concept of ageing and related definitions</li> <li>To understand the physiological and biochemical changes in old age.</li> <li>Assessment of nutritional status in old age</li> <li>To know about the nutritional requirement in old age</li> <li>To know about the major nutritional and health problems in old age</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>Visit to old-age homes</li> <li>Preparation of dishes suitable for older person</li> </ol>
		DSE-B-6-3	Food fermentation	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>To know about food fermentation</li> <li>To know about starter culture, bio fermentor etc.</li> <li>To know about production of different fermented food</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>Preparation of different fermented food</li> <li>Preparation of fermented pickles</li> </ol>

Netaji Nagar College for Women, Kolkata-92

Department of Food and Nutrition

Course Outcome of Food and Nutrition (Gen.)

Full Marks - 100, Credit - 6 (Th: 4 + P2)

Sl	Semester	Course Code FNTG	Course Name	Course Outcome
1.	Sem-1	CC/GE-1-1	Elementary Chemistry	<b>Theory:</b> 1. Understanding the basic chemistry related to nutrition science and everyday life Theory: 2. Understanding the law of conservation of mass, chemical and physical changes with their characteristics. 2. Description of the different laboratory proess- sedimentation, filtration, boiling, evaporation, sublimation 3. Understanding the basic concept of acid, base, pH, buffer, acid base indicators, molar normal solution. 4. Understanding what is colloid, what are the types, properties of colloid, dialysis. 5. Understanding atomic structure, electron, proton, neutron, their properties, symbol and valency of atoms, isotopes, isobars. Electronic configuration of atoms and how they make bonds with other elements 6. Understanding the basic concept of organic chemistry, classification of organic compounds, functional groups, aldehyde, ketones, omega 3 fatty acids. <b>Practical:</b> 1. Identification of carbohydrates and proteins 2. Acid base titration

2.	Sem-2	CC/GE-2-2	Elementary Physics	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To have an idea of units – C.G.S. and F.P.S. system, measurement of mass and weight, common and spring balance.</li> <li>3. To know the basic concepts of motion of body – displacement, velocity, acceleration units.</li> <li>4. To understand what is gravity – Acceleration due to gravity.</li> <li>5. To get an idea about hydrostatics – Pressure at a point, Archimedes Principles, Specific gravity, viscosity and surface tension.</li> <li>6. To have knowledge of thermometry, calorimetry.</li> <li>8. To learn the modes of transmission of heat, and an idea about thermoflask.</li> <li>9. To know about the three types of matter, changes of state, pressure cooker, Ice-machine.</li> <li>10. To understand the physics behind static electricity – Changing by friction, conductor and Insulator.</li> <li>11. To have an idea of primary cell, storage cell, Electroplating.</li> <li>13. Learn to define Potential, Current - relation between two.</li> <li>14. To know the measurement of current by ammeter and potential differential by voltmeter.</li> <li>15. To understand the concepts of electricity and its application in daily life – lamp, toaster, geyser, iron, micro-oven, refrigerator, cold storage, electric fuse.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. To understand the use of balance (Weighing a body)</li> <li>2. To determine specific gravity of a solid (heavier and insoluble in water).</li> <li>3. To determine specific gravity of a liquid by hydrostatic balance.</li> <li>4. To know how to determine specific gravity of a liquid by specific gravity bottle.</li> <li>5. Learn how to read a barometer.</li> <li>6. To determine lower and upper fixed point of a thermometer.</li> <li>7. To have an idea of fitting of electric fuses.</li> </ol>
----	-------	-----------	--------------------	---

3.	Sem-3	CC/GE-3-3	Elementary Physiology	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To have idea of animal cell: Structure and function.</li> <li>2. To get an overview of tissue- its definition, structure and functions of different types of tissue, e.g., epithelial, connective, nervous and muscular tissue (special emphasis on blood and bone).</li> <li>3. To understand digestive system: Structure involve in digestive system (mouth, esophagus, stomach, small intestine, large intestine, liver, pancreas, gall bladder) and their functions. Digestion and absorption of Carbohydrate, protein and fat.</li> <li>4. To get an elementary idea of metabolism, enzymes and hormones- name and their important functions. Metabolism in brief (Glycolysis, Glycogenesis, Gluconeogenesis, Cori's cycle, Kreb's cycle, Deamination, Transamination. Role of hormones in carbohydrate metabolism.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. Learn how to determine blood pressure of humans being- (a) systolic and b) diastolic.</li> <li>2. Learn to identify histological slides (Blood cells, Stomach, Small intestine, large intestine, Liver, pancreas).</li> <li>3. To get idea about determination of Bleeding Time (BT) and Clotting Time (CT).</li> <li>4. Lear how to detect blood group.</li> </ol>
----	-------	-----------	-----------------------	--

4.	Sem-4	CC/GE-4-4	Basic Nutrition and Food Science	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. Getting idea about nutrition, food, diet, balance diet, optimum diet, energy.</li> <li>2. Understanding concept of nutrients, macronutrients, micronutrients and foods can be classified on the basis of this. Clarify carbohydrates, proteins, fats, their classifications, function, sources and their roles in our diet. What are the water soluble and fat soluble vitamins &amp; minerals present in foods and their functions, excess, deficiencies.</li> <li>3. Description the concept of BMR, associated factors with BMR, TEE etc and how the energy need of a individual can be calculated on the basis of age, sex, physiological activity.</li> <li>4. Understanding the basic five food groups and importance of each.</li> <li>5. Understanding menu planning, diet plan for various age group. Importance of EBF, advantages of breast feeding over bottle feeding. Concept of malnutrition.</li> </ol> <p><b>Practical:</b></p> <ul style="list-style-type: none"> <li>• Having elementary idea of weights &amp; measures.</li> <li>• Planning, preparation and calculation of various nutrients obtained from dishes prepared by combination of cereals, pulses, vegetables, egg, milk, fish &amp; nuts.</li> <li>• Observing the preparation of jam, jelly, squash &amp; pickles.</li> </ul> <p>Planning, preparation and calculation of nutrients present in meals for adult male/female and modifications of diet required during special physiological conditions like pregnancy and lactation.</p>
----	-------	-----------	----------------------------------	---

5.	SEM-5	DSE-A1	Community nutrition	<p><b>Theory:</b></p> <ol style="list-style-type: none"> <li>1. To get an idea about basic concept of community, types, health, factors affecting community health, .</li> <li>2. To understand the different procedure of assessment of nutritional status by antropometric assessment, biochemical assessment, clinical sign &amp; symptoms and diet survey and its importance in community nutrition.</li> <li>3. To know about the aims and objectives of various national and international agencies and different voluntary organizations and their roles in community health.</li> <li>4. To know about the different nutrition intervention programme in India to combat malnutrition.</li> <li>3. To understand nutrition education and the different methods of giving nutrition and health education and what are the different tools that are used in these methods.</li> </ol> <p><b>Practical:</b></p> <ol style="list-style-type: none"> <li>1. To know the procedure of making home -made ORS. Its ingredients with required amount. Composition of WHO ORS.</li> <li>2. Preparation of weaning foods for infants.</li> <li>3. Preparation of a low cost diet with locally available food stuffs.</li> <li>4. To know practically how to conduct diet survey by 24 hours recall method</li> </ol>
----	-------	--------	---------------------	---

6.	SEM-6	DSE-B-1	Clinical nutrition	<p><b>Theory:</b></p> <ul style="list-style-type: none"> <li>• Knowing basic definitions related to dietetics.</li> <li>• Understanding basic concepts of diet therapy, therapeutic adaptations of diet, routine hospital diets and specially modified therapeutic diets.</li> <li>• Understanding causes, risk factors, dietary and general management of overweight and underweight.</li> <li>• Understanding causes, dietary and general management of diarrhea, constipation and jaundice.</li> <li>• Understanding definition, causes, classification, dietary and general management of nutritional anaemia.</li> <li>• Getting idea of hypertension, atherosclerosis, diabetes mellitus emphasizing on definition, causes, types, risk factors, signs, symptoms and dietary management.</li> <li>• Getting idea about causes, types, symptoms and dietary management of fever.</li> </ul> <p><b>Practical:</b> Planning and preparation of therapeutic diets for – diabetes mellitus, hepatitis, hypertension and obesity.</p>
----	-------	---------	--------------------	---

**Netaji Nagar College for Women, Kolkata-92**

**Department of Food and Nutrition**

**Course Outcome of Food and Nutrition (Hon.)**

**Full Marks - 100, Time: 1 year**

<b>Sl</b>	<b>Class</b>	<b>Course Code FNTA</b>	<b>Course Name</b>	<b>Course Outcome</b>
<b>1.</b>	<b>Part-III</b>	<b>PAPER VI UNIT I MODULE 20 &amp; 21</b>	<b>DIET THERAPY – A1 &amp; A2 THEORY</b>	<ul style="list-style-type: none"><li>• Understanding the concepts objectives and principles of diet therapy, therapeutic adaptations of normal diet and classification, composition and implication of therapeutic diets.</li><li>• Assessing patients need (diet counselling) through team approach of health care.</li><li>• Having the concept of routine hospital diets – regular, light, soft, fluid, parenteral and enteral feeding.</li><li>• Understanding etiological factors, prevention, treatment, energy modification, nutritional care and behavioral modifications of overweight, obesity and underweight along with anorexia nervosa and bulimia.</li><li>• Understanding the principles and management of diet for different febrile conditions, infections and surgical conditions.</li><li>• Understanding etiology, symptoms and management of diseases of stomach, intestine, liver &amp; biliary system and endocrine pancreas.</li><li>• Having the general concept, etiology, classification and dietary management of nutritional anaemia and thalassemia.</li></ul>
		<b>PAPER VI UNIT I MODULE 22 &amp; 23</b>	<b>DIET THERAPY – B1 &amp; B2 THEORY</b>	<ul style="list-style-type: none"><li>• Having knowledge regarding classification, symptoms, diagnosis and management of diabetes mellitus with special reference to insulin therapy, oral hypoglycemic agents, glucose monitoring, special diabetic foods and artificial sweeteners.</li><li>• Understanding symptoms, etiology, risk factors, management of atherosclerosis, hyperlipidemias, IHD and hypertension with brief overview of lipoproteins and preventive factors.</li><li>• Having idea of renal diseases like glomerulo-nephritis, nephritis, nephrotic syndrome, renal failure, uraemia, nephrolithiasis along with their classification, etiology, symptoms and dietary management and dialysis.</li><li>• Knowing the symptoms, diagnosis, dietary management and food selection of food allergies.</li></ul>

		<b>PAPER VII UNIT II MODULE 27</b>	<b>FOOD PRESERVATION PRACTICAL</b>	<ul style="list-style-type: none"> <li>• Getting idea of different methods of food preservation like drying, freezing, canning, bottling etc.</li> <li>• Getting idea of aseptic handling as well as sources of food contamination.</li> <li>• Preparation of preserved products – pickles, sauces, jam, jelly, squash etc.</li> <li>• Visiting canning industry/dairy farm to observe the practical application of the various methods and processes involved.</li> </ul>
		<b>PAPER VIII UNIT I MODULE 28</b>  <b>PAPER VIII UNIT I MODULE 29</b>	<b>DIET THERAPY – A1 PRACTICAL</b>  <b>DIET THERAPY – A2 PRACTICAL</b>	<ul style="list-style-type: none"> <li>• Planning, preparation and calculation of nutrients present in normal diets, fluid diets, soft/semi-solid diets, high protein diets, low fat &amp; low calorie diets, high fibre diets.</li> <li>• Planning, preparation and calculation of nutritive value of diets for the diseases like diabetes mellitus, peptic ulcers, viral hepatitis, cardio-vascular disease, gout and anaemias.</li> </ul>

**Course Outcome of Food and Nutrition (Gen.)**

**Full Marks - 100, Time: 1 year**

Sl	Class	Course Code FNTG	Course Name	Course Outcome
1.	Part- III	PAPER IV	<p><b>Group A – THEORITICAL</b></p> <p><b>Group B – PRACTICAL</b></p>	<ul style="list-style-type: none"> <li>Understanding the meaning and concept of community nutrition highlighting the importance of nutrition education, mortality and morbidity rates, maternal and child health, role of health workers and voluntary health organizations like WHO, FAO, ICMR, ICDS, ICAR, CSIR, ANP, VHAI, NIN &amp; CFTRI.</li> <li>Having idea of structure and layout of food premises like kitchen and pest control.</li> <li>Understanding the importance of personal hygiene of food handlers in handling and serving food.</li> <li>Getting general idea of chemical and microbial food contamination, toxins and food toxicology with reference to lead cadmium and zinc.</li> <li>Understanding contamination of water, its prevention, methods of water purification, water borne pathogens and diseases like diarrhea, dysentery, tyohoid, hepatitis along with their preventive measure and dietary management.</li> <li>Having idea of food additives, their classification, related health hazards and food adulteration.</li> <li>Knowing the importance and advantages of food fermentation, emphasizing on fermented milk products, vinegar and fermented pickles.</li> <li>Getting brief idea about functions and uses of spices like turmeric, cumin, coriander, fenugreek, black pepper, red chili and ajwain.</li> </ul> <ul style="list-style-type: none"> <li>Planning a layout of kitchen along with the commonly used equipment.</li> <li>Planning, preparation and calculation of nutritive value of diets for the diseases like diabetes mellitus, obesity, viral hepatitis, cardio-vascular disease.</li> <li>Estimation of blood pressure and hemoglobin concentration in blood of human subject.</li> </ul>

## **Department of History – Programme Outcomes**

The courses of the discipline of history are so designed to break the stereotypes of history learning and create interest among the students to study this important branch of social science. The students learn to apply the historical methods, to evaluate critically the record of the past and gain knowledge of the historians' craft or the historiography. The Core and Disciplinary papers provide the fundamental knowledge and pedagogical skills in the discipline of history and in the study of History of India and the World. The programmes are envisaged to provide a large amount of choice to cater to the interests of the students. The Skill Enhancement Courses (SEC) help to develop knowledge and skill that strengthen the future career goals and real-world skills of the students. The BA History programme courses are inter-disciplinary, keeping in mind that specialisation in History is the key to acquire cognitive skills from other disciplines.

### **Programme Outcomes (Honours Course):**

#### **PO1. Cognitive Knowledge:**

The Course aspires to acquaint the students with the political, social, economic and cultural history of the Indian subcontinent and the World like the History of Europe and East Asia. Students are thus made aware of the Indian heritage and World civilisation as well. It enables them to make journeys from the prehistoric times to Contemporary World with stress on the transition from the ancient to the modern period.

#### **PO2. Inter-disciplinary Knowledge:**

The study helps to familiarize the learners with varied openings of future research activities in archaeology, museology, anthropology and sociology.

#### **PO3. Critical and Logical Analysis and Communication Skills:**

It leads to an understanding of International and National Histories and helps in critical evaluation of the current dynamics of politics worldwide and thereby presenting historical insights and communicate novel interpretations through well-researched historical articles in journals and newspapers.

#### **PO4. Socio-cultural Awareness and Promotion of Concepts of National Integration and International Peace:**

The discipline makes students aware of the varied socio-cultural diversity and thereby developing a concern for society, national unity and evolve methods for promotion of international peace. This also enables and transforms the learners into responsible Indian citizens to make a better India and the world as well.

#### **PO5. Inculcating Social and Ethical Values:**

It creates a consciousness regarding establishment of gender equality and women empowerment and the application of the knowledge of history in every aspect of human life and fighting for human rights all over the world.

#### **PO6. Awareness of our Rich Heritage:**

History as a discipline inculcates an awareness for the preservation of our rich cultural heritage.

### **Programme Specific Outcomes (Honours Course):**

**PSO1.** The study of historiography would help the students of the discipline of history to construct original historical arguments based on primary source materials. This would help them to develop the knowledge of historical argument and research. They would acquire an understanding of the methods and techniques of research and develop an analytical attitude in the field of History in particular and Social Science in general.

**PSO2.** The students would be equipped with the skill to understand the present and shape the future on the basis of their acquired knowledge of the past. They would be able to enlighten the society on how to apply the past knowledge for building up a glorious future. With this goal in mind, the students are taken on tours of historical sites across the Hooghly River at Hansaswari Temple in Bansberia, the Imambarra and Bandel Church, Indian Museum, Victoria Memorial Hall, Swami Vivekananda's residence, Netaji Bhawan, Jorasanko Thakurbari and St. Pauls Cathedral Kolkata.

- PSO3. A bright student of History enriched with the analytical, logical and reasoning skills would be able to pursue a career of a researcher, sociologist, archaeologist, museologist, anthropologist, teacher or can even take up the profession of a tour guide.
- PSO4. The study of history and culture would inspire the students with a dynamic thought process and gain knowledge of the different interpretations on the progress and history of the evolution of the human civilisation. This would help them to have a thorough grip over the different trends and trajectories in the history of India and the world across the centuries.
- PSO5. To be acquainted with the ICT tools for presentation in the Seminars.

**Programme Outcomes (General Course):**

- PO1. The students are made aware of the meaning of 'History' or 'Itihasa', that is the chronology of the history of our glorious past which would help them to connect the past with the present.
- PO2. To enlighten them on the past histories of India making them understand the narratives of ancient, medieval and modern Indian history along with the changes in the world scenario through the Core and Discipline specific courses.
- PO3. The Skill Enhancement Courses (SEC) help to develop knowledge and skill that strengthen the future career goals and real-world skills of the students. The BA History programme courses are inter-disciplinary, keeping in mind that specialisation in History is the key to acquire cognitive skills from other disciplines.

**Programme Specific Outcomes (General Course):**

- PSO1. They would be able to acquire a rudimentary sense of historiography and the knowledge of historical argumentation.
- PSO2. The study would help them develop communication skills to express historical perspectives, including writings and oral presentations.
- PSO3. The study would enlighten them in the techniques and methods of gaining historical knowledge and thereby help in evaluating historical information.
- PSO4. History as a discipline would make them aware of the political, social, economic, cultural and intellectual heritage of our country.
- PSO5. The in-depth knowledge and skills that history as a discipline offers would cater to their future employments as museologists, curators, teachers and open gateways for further education in future.

Sl.	Semester	Course Code HISA	Course Name	Course Outcomes (COs)
1.	Sem-I  ( July To December)	CC-1-1	History of India (From the Earliest times to C 300 BCE)  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> This course imparts the basic idea among the students about reconstruction of History based on the primary sources and ancient texts. <i>CO 2.</i> Students can identify prehistoric societies, the settlement pattern of the ancient people and transitional phases based on the ancient remains. <i>CO 3.</i> Students can also correlate the socio-cultural matrix of the ancient people of Indian sub-continent and notion of our present Indian nation.
		CC-1-2	Social Formations and Cultural Patterns of the Ancient World other than India  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> By the end of the course the students will be aware of the gradual evolution of the human race. <i>CO 2.</i> They will be enlightened on the Bronze age civilization throughout the world and the importance of the discovery of Iron. <i>CO 3.</i> Students will be able to identify the socio-cultural patterns of classical antiquity.
2.	Sem-II  (January to June )	CC-2-3	History of India (c 300 BCE to c.750 CE)  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will acquire knowledge about the socio-economic exploitative mechanism and how it was connected with state formation by the Mauryan rulers. <i>CO 2.</i> This course helps to understand the nature of the ancient state especially between the Mauryan and Gupta period. <i>CO 3.</i> Students also can pinpoint socio-cultural-scientific activities in this period.
		CC-2-4	Social Formations and Cultural Patterns of the Medieval World other than India  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will gain an all encompassing knowledge of Medieval Europe. <i>CO 2.</i> Students will gain a comprehensive view of the basic traits of Judaism, Christianity, and Islam.
3.	Sem-III  (July To December)	CC-3-5	History of India (c.750 – 1206)  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> This course helps to understand the salient features of the early medieval period. <i>CO 2.</i> They can identify the evolution of the political structures, the socio-economic and cultural substance.
		CC-3-6	Rise of the Modern West –I  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will gain a vast knowledge on the changing concepts of Europe and the socio-economic, religious, and cultural transformation of Medieval Europe leading to the establishment of modern west. <i>CO 2.</i> This course makes the learners familiar with the nature of the society and economy and inherent changes therein. <i>CO 3.</i> Students can trace the changes in the European economy and its connection with the exploration of the 'new world' along with the impact on the native land and its people.
		CC-3-7	History of India (c.1206 – 1526)  <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Acclimatize the students the history of the Delhi Sultanate from c.1206 – 1526. <i>CO 2.</i> Make them aware of the socio-economic, religious and cultural ambience of the period.
		SEC-3-A-1	Archives and museums  <b>Full Marks - 100, Credit-2</b>	<i>CO 1.</i> To give them a cursory review of the history of the museums and archives. <i>CO 2.</i> To get a thorough knowledge of the nuances and the workings of the above two institutions.

4.	Sem-IV (January to June)	CC-4-8	Rise of the Modern West – 11 <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> They will gain a detailed knowledge of the scientific, technological, military and the enormous cultural changes taking place in Europe within 15 <sup>th</sup> to 17 <sup>th</sup> centuries. <i>CO 2.</i> They will be made conscious on the development of modern state system and the establishment of concepts of liberalism, democracy and citizens' rights.
		CC-4-9	History of India (c.1526-1605) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> This course helps the students to identify the ideologies of Mughal state by which the "Great Mughals" successfully consolidated and expanded the Mughal Empire. <i>CO 2.</i> It enables the learners to trace how did the Mughal polity, administrative mechanism, economy, trade, commerce, society evolve.
		CC-4-10	History of India (c.1605 – 1750s) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> This course helps the learners to understand cultural synthesis during the Mughal period. <i>CO 2.</i> Students can identify the factors which led to the disintegration of the Mughal State. <i>CO 3.</i> Students can also explore the legacy of the Mughal administrative mechanism and transitional phase in Indian History in between the Mughal Empire and the British State.
		SEC-4-B-2	Art Appreciation: an Introduction to Indian Art <b>Full Marks - 100, Credit - 2</b>	<i>CO 1.</i> This will equip the students with the knowledge of the Indian art through the ages as a medium of cultural expression. <i>CO 2.</i> Students will be able to understand the diversity of Indian art from ancient to modern times with special stress on its aesthetic value.

Sl	Semester	Course Code HISG	Course Name	Course Outcomes (COs)
1.	Sem-I ( July To December)	CC-1/GE-1	History of India (From the Earliest times to C 300 BCE) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> It imparts the basic idea among the students about reconstruction of History based on the primary sources and ancient texts. <i>CO 2.</i> Students can identify prehistoric societies, the settlement pattern of the ancient people and transitional phases based on the ancient remains. <i>CO 3.</i> Students can also correlate the socio-cultural matrix of the ancient people of Indian sub-continent and notion of our present Indian nation. <i>CO 4.</i> Students acquire knowledge about the socio-economic exploitative mechanism and how it was connected with state formation by the Mauryan rulers along with the other dynasties.
2.	Sem-II (January to June )	CC-2/GE-2	History of India (c 300 CE to c.1206 CE) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> This course helps to understand the salient features of the early medieval period. <i>CO 2.</i> They can identify the evolution of the political structures, the socio-economic and cultural substance. <i>CO 3.</i> This course helps to understand the nature of the transition during the Guptas and post-Guptas times. Students also can pinpoint socio-cultural-scientific exercise in this period.
3.	Sem-III (July To December)	CC-3/GE-3	History of India (c.1206 – 1707) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will be enlightened on the chief characteristics of the Sultanate period. <i>CO 2.</i> Students will gain knowledge on the socio-economic and cultural history of the period. <i>CO 3.</i> This course helps the students to identify the ideologies of Mughal state by which the "Great Mughals" successfully consolidated and expanded the Mughal Empire. <i>CO 4.</i> It enables the learners to trace how did the Mughal polity, administrative mechanism, economy, trade, commerce, society evolve.

4.	Sem-IV (January to June)	DSE-3-A-2	Some aspects of European History: C. 1780-1945 <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will be able to comprehend the fundamentals of modern European history (C. 1780-1945). <i>CO 2.</i> They will be able to evaluate the revolutionary changes in terms of society, economy and polity leading to the establishment of the modern world system.
		SEC-3-A-1	Historical Tourism: Theory & Practice <b>Full Marks – 100, Credit-2</b>	<i>CO 1.</i> Students will be enlightened on the history of tourism, the inbuilt cultural heritage of India. <i>CO 2.</i> The journeys through the various architectural structures of India would make them understand the importance of historical tourism and its practical applicability.
		CC-4/GE-4	History of India (c.1707 – 1950) <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> Students will get a comprehensive view on the various nuances and undercurrents of the history of India (c.1707 – 1950). <i>CO 2.</i> It will help them to get the detailed understanding of the social economic and political scenario prevailing in India and the importance of the colonial legacy.
		DSE-3-B-1	Pattern of Capitalism in Europe C. 16 <sup>th</sup> Century to Early 20 <sup>th</sup> Century <b>Full Marks - 100, Credit - 6 (Th: 5 + Tu:1)</b>	<i>CO 1.</i> The course aims at making the students aware of the story of capitalism as a phenomenon in the heartland of Europe. <i>CO 2.</i> Students will be able to understand the various aspects related to the patterns of Industrial Revolution in continental Europe. <i>CO 3.</i> How the phenomenon spread to the rest of the world.
		SEC-4-B-1	Museums & Archives in India <b>Full Marks - 100, Credit-2</b>	<i>CO 1.</i> To give them a cursory review of the history of the museums and archives. <i>CO 2.</i> To get a thorough knowledge of the nuances and the workings of the above two institutions.

Sl	B. A. Part III (1+1+1 2009 Regulations ) Session 2018-19	Course Code HISA	Course Name	Course Outcomes (COs)
1.	History of East Asia from 1839 to 1950)  <b>Full Marks - 100</b>			<p><b>CO 1.</b> From the first unit of this course students will be able to understand how Chinese nation was stranglehold by the western countries during the 1840s on the one hand. On the other how the gradual growth of nationalism and the rise of Communist ideology in China helped China to become a powerful state in 1940s under the leadership of Mao-tse-Tung.</p> <p><b>CO 2.</b> From the second unit of this course Students can identify the transformation of Japan from the Tokugawa times to Imperialist Japan based on the economic modernization of Japan.</p>
2.	History of Modern India (c 1800 CE to c.1964 CE)  <b>Full Marks - 100</b>			<p><b>CO 1.</b> This course helps to understand a significant period of modern Indian History covering the period (c 1800 CE to 1964)</p> <p><b>CO 2.</b> They will be made aware of the socio-cultural ideas and changes in India in general and Bengal in particular in the 19<sup>th</sup> Century.</p> <p><b>CO 3.</b> They would also be able to understand the ideologies of the Raj, reactions of the indigenous population, the growth of nationalism, colonial policies and the gradual evolution of independent India with special reference to Partition, formulation of our Indian constitution and the Nehru years.</p>
3.	History of Europe from 1789 to 1919  <b>Full Marks - 100</b>			<p><b>CO 1.</b> Students will be able to comprehend the fundamentals of modern European history (C. 1789-1919).</p> <p><b>CO 2.</b> They will be able to evaluate the revolutionary changes in terms of society, economy and polity leading to the establishment of the modern world system.</p>
4.	World Politics in the 20 <sup>th</sup> Century from 1919 to C 20000 <b>Full Marks - 100</b>			<p><b>CO 1.</b> Students would be enlightened on the international relations between the two world wars.</p> <p><b>CO 2.</b> The origins of the Second World War, growth of bi-polarism, emergence of the cold war politics.</p> <p><b>CO 3.</b> Students will be able to gain a vast knowledge on the scenario of the world since 1945, emergence of Third World, end of socialist regime, Glasnost-Perestroika and globalisation.</p>

Sl	B. A. Part III (1+1+1 2009 Regulations ) Session 2018-19	Course Code HISG	Course Name	Course Outcomes (COs)
1.	India and the World <b>Full Marks - 100</b>			<p><b>CO 1.</b> From the first unit of this course students will be able to identify the causes which led to the Partition of India along with the worst consequences of this said Partition.</p> <p><b>CO 2.</b> This course helps the learners how the post-Partition India experienced parliamentary democracy, Nehru's era, economic reforms, tensions between India and Pakistan.</p> <p><b>CO 3.</b> From the second unit of this course students would be enlightened on the international relations during the post-second world war times.</p> <p><b>CO 4.</b> It helps to understand the growth of bi-polarism, emergence of the cold war politics. Students will be able to gain a vast knowledge on the scenario of the world since 1945, emergence of Third World, end of socialist regime, Glasnost-Perestroika and globalisation.</p>

**Netaji Nagar College for Women, Kolkata-92**  
**Department of History**  
**Course Outcomes of History**

Sl.	Semester	Course Code HISA	Course Name	Course Outcomes (COs)
1.	Sem-V  ( July to December)	CC-11	History of Modern Europe (c.1780 – 1939) <b>Full Marks - 100, Credit - 6</b> (Th: 5 + Tu:1)	<p><b>CO 1.</b> This course will help to acquire an overview of the History of Modern Europe (c.1780 – 1939).</p> <p><b>CO 2.</b> Students can identify the major events of the period like French Revolution, Industrial Revolution in England and continental Europe, Russian Revolution and the two World Wars, their causes and their far reaching affect on Europe and the world.</p> <p><b>CO 3.</b> It helps them to analyze the various trends and continuity of changes in European society.</p> <p><b>CO 4:</b> Makes them acquainted with the ideas of democracy, republicanism, nationalism, liberalism, socialism and capitalism.</p>
		CC-12	History of India (c 1750s – 1857) <b>Full Marks - 100, Credit - 6</b> (Th: 5 + Tu:1)	<p><b>CO 1.</b> This course will help the students to identify the transition period in 18<sup>th</sup> century India and establishment of the <i>Pax Britannica</i> across India.</p> <p><b>CO 2.</b> It will help them understand the ideology of the colonial state and impact on the rural society.</p> <p><b>CO 3.</b> Students will be able to identify the changes which occurred in agriculture, trade and industry and basic characteristics of the colonial economy.</p> <p><b>CO 4.</b> Makes them aware about the various modes of popular resistance to the colonial rule like the revolt of 1857, Santhal rebellion and other uprisings.</p>
		DSE-A-1	History of Bengal (c.1757-1905) <b>Full Marks - 100, Credit - 6</b>	<p><b>CO 1.</b> This course will help the students to identify the socio-economic and political changes specifically in case of Bengal from Plassey to Partition of Bengal (1757-1905) under the colonial stranglehold.</p> <p><b>CO 2.</b> It also makes them aware about the cultural development of Bengal in terms of interaction between the Bengal and western culture during eighteenth and nineteenth Century.</p> <p><b>CO 3.</b> This course will also help the students to trace the protest from the various agency of Indian societies specifically from the peasant community.</p>
		DSE-B-1	History of Modern East Asia – I China (c.1840 – 1949) <b>Full Marks - 100, Credit - 6</b>	<p><b>CO 1.</b> This course will help the students to trace the pre-modern China and intervention of the western powers into China and the rise of semi-feudal and semi-colonial China.</p> <p><b>CO 2.</b> It also helps them to mark out the reaction came from various Chinese community against the ruling class and the western powers.</p> <p><b>CO 3.</b> Students will be able to identify the development of national movement, rise of communism and the Communist movement as well especially under the leadership of Mao Tse Tung.</p>
2.	Sem-VI  (January to June )	CC-13	History of India (c. 1857 – 1964) <b>Full Marks - 100, Credit - 6</b> (Th: 5 + Tu:1)	<p><b>CO 1.</b> Students will acquire knowledge about the cultural changes and socio-religious reform movements of the 19<sup>th</sup> century India.</p> <p><b>CO 2.</b> This course helps also to get an idea about the rise nationalism and the early phase of national movement.</p> <p><b>CO 3.</b> Students will be able to comprehend the nature of Gandhian nationalism and its interaction with the various social groups peasants, dalits, women etc.</p> <p><b>CO 4.</b> Students will gain an all encompassing knowledge rise of communalism, the final phase of the nationalist movement, the independence, and Partition of India.</p> <p><b>CO 5.</b> Makes them acquainted with the emergence of a new state during Nehruvian era (1947-64).</p>
		CC-14	History of World Politics: (1945-1994) <b>Full Marks - 100, Credit - 6</b> (Th: 5 + Tu:1)	<p><b>CO 1.</b> Students will gain a comprehensive view of the contemporary world with the history of world politics from 1945to 1994 and the major events associated with it like the Cold War, De-Stalinization, De-colonisation and the break up of USSR, Glasnost and Perestroika.</p> <p><b>CO 2.</b> Makes them conscious about the West-Asian crisis, emergence of the Republic of China, the Aptertheid movement and feminism.</p>
		CC-DSE-A-3	History of Bengal (c.1905-1947) <b>Full Marks - 100, Credit - 6</b>	<p><b>CO 1.</b> This course will help the students to identify the socio-economic and political changes in case of Bengal from Partition of Bengal towards the Partition of India, birth of West Bengal (1905-1947).</p>

				<p><b>CO 2.</b> It also makes them aware about the development of communal Politics nationally, Bengal politics and its connection with Muslim League as well.</p> <p><b>CO 3.</b> This course will also help the students to trace the specific regional patterns of Gandhian Movement from Non-Cooperation movement to Quit India Movement.</p> <p><b>CO 4.</b> It will also help them to identify the development of Left politics in Bengal; protests came from the various groups of Bengal community peasant, labour, various castes, and women.</p>
		<b>CC-DSE-B-3</b>	History of Modern East Asia – II Japan (c.1868 – 1945) <b>Full Marks - 100, Credit - 6</b>	<p><b>CO 1.</b> This course will help the students to trace the pre-modern Japan and intervention of the western powers into Japan.</p> <p><b>CO 2.</b> It also helps them to identify the socio-economic, cultural, and political development in terms of restoration in Meiji Japan leading to establishment of Modern Japan.</p> <p><b>CO 3.</b> Students will be able to identify the nature of Japanese Imperialism and also the development of Fascism in Japan.</p>

Sl	Semester	Course Code HISG	Course Name	Course Outcomes (COs)
1.	Sem-V  ( July To December)	DSE-A-2	Some aspects of European History: C. 1780-1945 <b>Full Marks-100, Credit-6 (Th: 5 + Tu:1)</b>	<p><b>CO 1.</b> Students will be able to comprehend the fundamentals of modern European history (C. 1780-1945).</p> <p><b>CO 2.</b> They will be able to evaluate the revolutionary changes in terms of society, economy, and polity leading to the establishment of the modern world system.</p>
		SEC-A-2	Indian History & Culture <b>Full Marks-100, Credit-2</b>	<p><b>CO 1.</b> Students will be able to understand the various aspects related to the Indian History and Culture. This course will help them to understand Indian environment, Indian culture, Indian tradition, and practices.</p> <p><b>CO 2.</b> The course aims at making the students aware of social inequality, gender questions, cultural heritage of India, performing arts etc.</p>
2.	Sem-VI  (January to June )	DSE-B-1	Pattern of Capitalism in Europe C. 16 <sup>th</sup> Century to Early 20 <sup>th</sup> Century <b>Full Marks-100, Credit-6 (Th: 5 + Tu:1)</b>	<p><b>CO 1.</b> The course aims at making the students aware of the story of capitalism as a phenomenon in the heartland of Europe.</p> <p><b>CO 2.</b> Students will be able to understand the various aspects related to the patterns of Industrial Revolution in continental Europe.</p> <p><b>CO 3.</b> How this phenomenon spreaded to the rest of the world.</p>
		SEC-B-2	Orality and Oral Culture in India <b>Full Marks-100, Credit-2</b>	<p><b>CO 1.</b> This course helps students to get an idea about the orality and oral culture in India.</p> <p><b>CO 2.</b> This course will help to acquire an overview on history and historiography of orality, research methodologies, etc.</p>

# Netaji Nagar College for Women

## Department of Mathematics

### C.B.C.S. & Three Year Degree Programme: B.Sc. General Degree Course

#### **PROGRAMME SPECIFIC OUTCOMES OF MATHEMATICS (GENERAL): –**

After successful completion of the course the students

1. Are equipped with mathematical modeling ability and problem solving skills.
2. Are outfitted with a wide range of mathematical techniques and methods to be used in other scientific domains.
3. Will be able to accurately organize, analyze and interpret data.
4. Are capable of understanding both concrete and abstract problems.
5. Will be competent to apply mathematical problems and solutions in a variety of contexts related to science, technology, business and industry.
6. Will be able to use computer programming to solve various mathematical problems numerically.

#### **COURSE OUTCOMES OF MATHEMATICS (GENERAL): –**

SEMESTER – I (Full Marks – 100) (C.B.C.S. Degree Programme)			
COURSE CODE	COURSE NAME	COURSE OUTCOMES	
MTMG-CC1/GE1  <b>Credit – 06 (Theory – 05, Tutorial – 01)</b>	Algebra-I	<ul style="list-style-type: none"> <li>To understand complex numbers and equations.</li> <li>To get acquainted with basic properties of polynomials.</li> <li>To find the rank of a matrix and solve simultaneous equations.</li> </ul>	
	Differential Calculus-I	<ul style="list-style-type: none"> <li>To understand Real Number System and Real Valued functions along with the idea Limit, Continuity and Derivative.</li> <li>To Gain knowledge about function of several variables.</li> <li>To learn Curvature, Asymptotes, Envelope and Singular Points of a curve.</li> </ul>	
	Differential Equation-I	<ul style="list-style-type: none"> <li>To understand the genesis of Ordinary Differential Equation.</li> <li>To learn various methods to solve ODE.</li> </ul>	
	Coordinate Geometry	<ul style="list-style-type: none"> <li>To be able to use transformation of axes in order to find the nature of a conic.</li> <li>To gain knowledge about Pole, Polars, Pair of Tangents, Normals, Right Circular Cone.</li> </ul>	
SEMESTER – II (Full Marks – 100) (C.B.C.S. Degree Programme)			
COURSE CODE	COURSE NAME	COURSE OUTCOMES	
MTMG-CC2/GE2  <b>Credit – 06 (Theory – 05, Tutorial – 01)</b>	Differential Calculus-II	<ul style="list-style-type: none"> <li>To get basic ideas about Sequence and Series of real numbers along with various tests for their convergence.</li> <li>To learn Mean Value Theorems and Taylor series.</li> <li>To determine the maxima and minima for several variables using higher order derivatives.</li> </ul>	
	Differential Equation-II	<ul style="list-style-type: none"> <li>To solve linear homogeneous equation and eigenvalue problems.</li> </ul>	

		<ul style="list-style-type: none"> <li>To formulate and solve partial differential equations.</li> </ul>	
	Vector Algebra	<ul style="list-style-type: none"> <li>To learn addition and multiplication of vectors</li> <li>To find the vector equation of straight lines &amp; planes</li> <li>To estimate the Work done and Moment.</li> </ul>	
	Discrete Mathematics	<ul style="list-style-type: none"> <li>To gain knowledge about Integers, Principle of Mathematical Induction, Division Algorithm.</li> <li>To know congruence relation &amp; class and to find check digits for ISBN, UPC, Credit Card.</li> <li>To get ideas about Boolean algebra, Logic Gates and Switching Circuits.</li> </ul>	
<b>SEMESTER – III (Full Marks – 100)</b> <b>(C.B.C.S. Degree Programme)</b>			
<b>COURSE CODE</b>	<b>COURSE NAME</b>	<b>COURSE OUTCOMES</b>	
MTMG-CC3/GE3  <b>Credit – 06 (Theory – 05, Tutorial – 01)</b>	Integral Calculus	<ul style="list-style-type: none"> <li>To know evaluation of definite and indefinite integrals.</li> <li>To know Beta &amp; Gamma functions.</li> </ul>	
	Numerical Methods	<ul style="list-style-type: none"> <li>To learn about various errors in approximations</li> <li>To know interpolation, numerical solutions of various equations.</li> <li>To learn numerical integration</li> </ul>	
	Linear Programming	<ul style="list-style-type: none"> <li>To learn about formulation &amp; solution of LPP.</li> <li>To know about convex set, extreme points, feasible solution.</li> <li>To solve Simplex, Transportation &amp; Assignment problems.</li> </ul>	
<b>SEMESTER – IV (Full Marks – 100)</b> <b>(C.B.C.S. Degree Programme)</b>			
<b>COURSE CODE</b>	<b>COURSE NAME</b>	<b>COURSE OUTCOMES</b>	
MTMG-CC4/GE4  <b>Credit – 06 (Theory – 05, Tutorial – 01)</b>	Algebra-II	<ul style="list-style-type: none"> <li>To gain knowledge about Groups, Rings &amp; Fields.</li> <li>To know about Vector Space, Linear Combination of Vectors, Linear Dependence &amp; Independence of Vectors.</li> <li>To learn about linear quadratic forms, Characteristic Equations, Eigenvalues &amp; Eigenvectors.</li> </ul>	
	Computer Science & Programming	<ul style="list-style-type: none"> <li>To know the Hierarchy of computer languages.</li> <li>To learn algorithm &amp; flowcharts of computer programming.</li> <li>To know FORTRAN 77 variables, constants, expressions and programming.</li> </ul>	
	Probability & Statistics	<ul style="list-style-type: none"> <li>To study Probability theory and probability distribution.</li> <li>To know sample survey, correlation</li> <li>To use sampling theory and test null &amp; alternative hypotheses</li> </ul>	
<b>Semester – V (Full Marks – 100)</b> <b>(C.B.C.S. Degree Programme)</b>			
<b>COURSE CODE</b>	<b>COURSE NAME</b>	<b>COURSE OUTCOMES</b>	
MTMG-DSE-A  <b>Credit – 06 (Theory</b>	Particle Dynamics	<ul style="list-style-type: none"> <li>To organize their knowledge about force and motion, work-energy etc.</li> <li>Study of motion of a particle in a straight line under</li> </ul>	

– 05, Tutorial – 01)		various kind of forces. • To know the projectile motion in vacuum & medium with resistance. • To gain knowledge about Kepler’s laws of motion.	
<b>Semester – VI (Full Marks – 100)</b> <b>(C.B.C.S. Degree Programme)</b>			
MTMG-DSE-B  <b>Credit – 06 (Theory – 05, Tutorial – 01)</b>	Advanced Calculus	• To learn point-wise & uniform convergence of sequence and series of functions. • To study Fourier Sine & Co-sine series. • To gain knowledge about Laplace & Inverse Laplace Transformations.	

## **Netaji Nagar College for Women**

### **Department of Philosophy- Programme Outcomes**

Philosophy in essence is a search of answers. Philosophy is a reflection of a larger picture of the human condition and the history of human thought. Though philosophy is inextricably linked with the contemplation of existence, but it looks at the day-to-day issues people face, moral dilemmas, the acquisition of knowledge, the evaluation of art. Philosophy is a valuable tool for evaluating and improving of students' life and their mental faculties. Philosophy is an activity of the mind. Students can practice philosophy to increase their understanding of things and improve the inner workings of the mind. Whenever students get into a philosophical argument they are allowed to expand their ability to reason, to question, also to understand the abstract concepts.

#### **Programme outcomes ( Honours course)**

##### **PO1: Knowledge Development**

Philosophy makes a central contribution to the educational enterprise through its demands upon intellectual activity. This study helps us to enhance students' ability to solve problems, writing skills, communication skills.

##### **PO2: Communicative skill development**

Philosophy teaches interpretive writing through its examination of challenging texts, comparative writing through emphasis on fairness to alternative positions, argumentative writing through developing students' ability to establish their own views. Students are able to communicate well both orally and in writing.

##### **PO3: Logical and critical thinking development**

Studying philosophy improves reasoning and critical thinking among pupils. The ability to think logically, the ability to analyze and solve problems are developed among students.

##### **PO 4: Ethical development**

The study of philosophy benefits students intellectually, spiritually and morally. They can learn that there is remarkable intellectual and spiritual connection between themselves and people from different times and places.

##### **PO 5: Social and cultural development**

Actually retain a great deal of factual information from their excursion. When they go on an excursion it brings them an environment where they explore and experience.

##### **PO 6: Content Development**

Philosophy provides students basic tools of self expression, skill in presenting ideas through well constructed systematic arguments. Students learn to build and defend their own views, to appreciate competing positions.

### **Programme Specific outcomes (Honours course)**

**PSO 1:** Different systems in Indian Philosophy are helpful to provide a vision of the Reality. Along with the study of Greek Philosophy enriches the mind-stuff of the students.

**PSO 2:** Indian Philosophy is a combination of ethics, religion and philosophy. As such it is wider in its dimension and is helpful for facing Civil Service Examinations. A study of western Philosophy gives a broad idea about Western literature and philosophy and develops a scientific attitude toward Reality among students.

**PSO 3:** Psychological aspects are given a clear view about the inner world towards students. This area also can enrich a sense of nationalism in students. In the age of globalization the critical study of civilization, liberty, equality and justice etc. are necessary for developing social attitude in students. The area of the study of religion philosophy promotes a sense of spiritualism in students.

**PSO 4:** A study of Logic enables students to get the knowledge of 'reasoning' which is necessary for appearing competitive examination. Logic is a study of argument or reasoning. It is helpful for different competitive examinations Study of Logic enables students to get the knowledge of 'reasoning' which is necessary for appearing competitive examinations .

**PSO 5:** The Skill Enhancement Courses (SEC) are interdisciplinary, to develop knowledge and skill that helps students future career goals and real-world skills of the student.

### **Programme outcomes ( General course)**

The study of philosophy contributes distinctively and substantially to the development of students' critical thinking. Philosophy is a means by which student can think about critically and come to understand themselves and their existence. Philosophy is an activity of the mind. So students can practice philosophy to increase their understanding of things and improve the inner workings of the mind. Students can developed their ability to reason, to question, also to understand the abstract concepts

#### **PO1: critical and logical thinking development**

philosophy is that it is of enormous and enduring interest. By exercising students' mind in the disciplines of critical and logical thought, this helps us to enhance students' ability to solve problems, writing skills, communication skills. It also helps students to analyze concepts, definitions, arguments and problems.

#### **PO2: Communication development**

This study provides students basic tools of self expression, skill in presenting ideas through well constructed systematic arguments. It also helps students to enhance their ability to explain difficult material and helps to eliminate ambiguities and vagueness from their writing and speech.

#### **PO3: Carrier development**

Philosophy provides students with valuable skills that prepare them for an array of careers including those in international relations, business, public relations, education.

#### **PO4: Ethical development**

gain the ability to imagine, debate, clarify the nature of good life. Philosophy encourages and empowers students to discover what really is true and good, right and wrong.

#### **Programme specific outcomes (General course)**

**PSO 1:** Different systems in Indian Philosophy are helpful to provide a vision of the Reality. A study of Indian Philosophy enables students to prepare for PSC and other competitive examinations.

**PSO 2:** A study of Greek Philosophy enriches the mind-stuff of the students and also enables students to prepare for different competitive examinations

**PSO 3:** Logic is a study of argument or reasoning. A study of truth-functional logic enables students to know more and more about reasoning. It is helpful for different competitive examinations

**PSO 4:** The basic concepts of sensation, introspection and the learning methods are enriched students knowledge. Psychological aspects of this topic given a clear view about the inner world towards students.

**PSO 5:** Ethics is normative science. But the application of ethics in practical life specially in business we need codes of ethics which ensure an organization to run smoothly. It guides us with the principles of ethics like loyalty, fairness, integrity, trust.

**PSO 6:** The Skill Enhancement Courses (SEC) are interdisciplinary, to develop knowledge and skill that helps students future career goals and real-world skills of the student.

### **B. A. Part III (1+1+1)- 2009 regulations**

#### **Subject- Philosophy**

#### **Programme outcomes (Honours course)**

The philosophy of a country is the cream of its culture and civilization. All the systems regards philosophy as a practical necessity and cultivate it in order to understand how life can be best led. The aim of philosophical wisdom is not merely the satisfaction of intellectual curiosity but mainly an enlightened life led with far-sight, fore-sight and insight.

#### **PO 1: spiritual development**

Philosophical thoughts prevent the mind from ending in despair and guarantee it's final optimism is what may be described as spiritualism. It helps the students to build up spiritualism.

**PO 2: knowledge of reality**

Ignorance of reality is the cause of our bondage and sufferings, and liberation from there cannot be achieved without the knowledge of reality,i.e, the real nature of the world and the self. It helps to understand the knowledge of reality.

**PO 3: Ethical Value**

Ethical Value helps the students to deal more effectively with ethical dilemmas by eliminating those behaviour that do not conform to our sense of right or wrong- our best rational interest, without sacrificing others.

**PO 4: Idea development**

It helps the students to learn the Nature of consciousness and the relationship between mind and matter. It helps to develop the knowledge of existence, objects and their properties, space and time,cause and effect and possibility.

**Programme Specific outcomes ( Honours course)**

**PSO 1:** Students can learn the logical implications, which helps to acquire true knowledge of reality which is based on logical ground.

**PSO 2:** Students can learn about the philosophy of language Indian and western. It helps to learn the relationship between nature of language and the world. It can developed an idea of fundamental properties of being with nature.

**PSO 3:** Student can explore the nature and criteria of knowledge.

**Programme outcomes ( General course)**

Philosophy is the pursuit of wisdom, truth and knowledge. Philosophy has interpreted and his various activities in a comprehensive manner. Philosophy tries to answer the deepest questions to life. It is an attempt to satisfy the desire for knowledge arises from the rational nature of man.

**PO 1: Understanding and justification**

It helps to understand the thoughtful consideration of human society. The basic laws which operate the society. It helps the students to deal with the critical analysis of society and politics and conceptualise alternative ways to organize society based on morality.

**PO 2: contemporary thoughts**

It helps the student to understand the science of the self , realistic idealism, freedom, authority and imagination, theory of values, freedom through knowledge and the spirit in man.

**Programme Specific outcomes (General course)**

**PSO 1:** Students can develop sense of nationalism, and the system of government. They also learn the rules of civil society, political views. Also social attitudes and knowledge of civilization.

**PSO 2:** Students can improve their sense of equality, liberty, justice etc. It enriches the views of social, political and spiritual concepts towards the contemporary world.

## **Netaji Nagar College for Women**

### **Course Outcomes**

#### **Philosophy ( Honours)**

##### **Semester – I**

###### **CC – 1 – INDIAN PHILOSOPHY -I**

Different systems in Indian Philosophy are helpful to provide a vision of the Reality. A study of Indian Philosophy enables students to prepare for PSC and other competitive examinations.

###### **CC-2- HISTORY OF WESTERN PHILOSOPHY -I**

There were many eminent thinkers in Greece. A study of Greek Philosophy enriches the mind-stuff of the students and also enables students to prepare for different competitive examinations.

##### **Semester-2**

###### **CC3- OUTLINE OF INDIAN PHILOSOPHY-II**

Indian Philosophy is a combination of ethics, religion and philosophy. As such it is wider in its dimension and is helpful for facing Civil Service Examinations

###### **CC4- HISTORY OF WESTERN PHILOSOPHY-II**

A study of western Philosophy gives a broad idea about Western literature and philosophy and develops a scientific attitude toward Reality among students.

##### **Semester-3**

###### **CC-5- PHILOSOPHY OF MIND**

The basic concepts of sensation, introspection and the learning methods are enriched students knowledge. Psychological aspects of this topic given a clear view about the inner world towards students.

###### **CC-6- SOCIAL & POLITICAL PHILOSOPHY : INDIAN & WESTERN.**

The fundamental concepts introduced in this paper can enrich a sense of nationalism in students. In the age of globalization the critical study of civilization, liberty, equality and justice etc. are necessary for developing social attitude in students.

###### **CC 7- PHILOSOPHY OF RELIGION**

A study of religious philosophy promotes a sense of spiritualism in students. It is helpful for civil service examinations

###### **SEC-A: MAN AND ENVIRONMENT**

Indian civilization was known as eco- friendly civilization. In past , it did express a profound awareness of need to evolve a balanced pattern in the man – environment interaction . The Rig – Veda says “my

mother is vast earth”. Students can learn about the Indian Environmental tradition and they can know how to protect nature. Upanishads are wisdom teaching that explore the deeper internal meaning sacrificing.

#### **SEMESTER IV**

##### **CC 8- WESTERN LOGIC-I**

A study of Logic enables students to get the knowledge of ‘reasoning’ which is necessary for appearing competitive examinations.

##### **CC 9-WESTERN LOGIC -II**

Logic is a study of argument or reasoning. A study of truth-functional logic enables students to know more and more about reasoning. It is helpful for different competitive examinations.

##### **PHIA-CC -10 :EPISTEMOLOGY AND METAPHYSICS (Western)**

Epistemology and Metaphysics are not very far apart . Metaphysics is the branch of philosophy concerned with nature and fundamental properties of being . It help the students to explore the sources, nature , limits and criteria of knowledge.

##### **SEC-B: EMERGING TRENDS OF THOUGHT**

**FEMINIST PHILOSOPHY:** Feminism is a study of knowing women rights, that includes seeking to establish educational and professional opportunities for women that are equal to those of men.

**ENVIRONMENTAL PHILOSOPHY:** Environmental Philosophy is concerned with the natural environment and human’s place within it. So by studying environmental philosophy student can explore the moral relationship humans have with earth, animals and plants.

### **Philosophy (General)**

#### **SEMESTER-I**

##### **PHIG-CC-1: Indian epistemology and metaphysics**

Different systems in Indian Philosophy are helpful to provide a vision of the Reality. A study of Indian Philosophy enables students to prepare for PSC and other competitive examinations.

#### **SEMESTER-II**

##### **PHIG-CC-2: Western epistemology and metaphysics**

There were many eminent thinkers in Greece. A study of Greek Philosophy enriches the mind-stuff of the students and also enables students to prepare for different competitive examinations

#### **SEMESTER-III**

##### **PHIG-CC-3: Western Logic**

Logic is a study of argument or reasoning. A study of truth-functional logic enables students to know more and more about reasoning. It is helpful for different competitive examinations

##### **PHIG- SEC-A : Business Ethics**

It is a form of professional ethics, ethics is normative science. But the application of ethics in practical life specially in business we need codes of ethics which ensure an organization to run smoothly. It guides us with the principles of ethics like loyalty, fairness, integrity, trust.

#### **SEMESTER-IV**

##### **PHIG-CC-4: Philosophy of mind**

The basic concepts of sensation, introspection and the learning methods are enriched students knowledge. Psychological aspects of this topic given a clear view about the inner world towards students.

##### **PHIG-SEC-B : Man and Environment**

**Environmental Philosophy:** Environmental philosophy is the discipline in philosophy that studies the moral relationship between human beings and nature, as well as the value and moral status of environment. Study of environmental philosophy teaches the students how to conserve our world and manage our natural resources to meet our increasing needs and wants.

**Eco-feminism :** Eco-feminism is a study of combining two branches of ecology and feminism. Where nature is compared with a women. It helps the student to examine the effect of gender categories in order to demonstrate the ways in which social norms event unjust dominance over women and nature.

#### **BA Part- III (1+1+1)- 2009 regulations**

##### **Philosophy**

##### **Core Outcomes (Honours course)**

##### **Paper- V: Indian logic and epistemology**

It developed logical realism. Students can acquire true knowledge of reality which is based on logical ground not mere on intuition or faith. Also create a sense of spiritualism in the mind of the students.

##### **Paper-VI: Philosophy of language, epistemology and metaphysics (western):**

students can learn the relationship between nature of language and the world. It develops an idea fundamental properties of being with nature. It help students to explore the sources, nature, limits and criteria of knowledge.

##### **PAPER- VII: Ethics and Philosophy of Religion**

**Ethics:** Ethics belongs to normative science. It is called moral philosophy, it is concerned with what is morally good and wrong. It helps us to make practical decisions and its major concerns include the nature of ultimate value and the standards by which human actions can be judged right or wrong.

**Philosophy of Religion:** Philosophy of Religion has an important role in helping human beings understand and evaluate different religious traditions, beliefs, philosophical traditions. It concerned with the philosophical appraisal of human religious attitudes.

##### **PAPER-VIII : HUME**

Hume is regarded as one of the most influential empiricist philosopher. Though he seemed as an extreme empiricist philosopher but from his writing it is evident that he appeals to mankind that we should behave

human being first, then one can be a philosopher. Hume could be a constructive, since he accounted for human understanding of nature, it help students about knowing the understanding of human nature.

**Core Outcomes(General course)**

**PAPER-IV: Social- political philosophy and contemporary Indian thought**

**Social political philosophy:** it developed senses of internationalism on students. Also developed social attitudes. Students can acquire knowledge of civilization. Students can improve the sense of equality, liberty, justice etc.

**Contemporary Indian philosophy:** students can know the foundation of modern ethics in social perspective. It can develop philosophical and religious views of the world. Students can learn the process of social, political views and rules of civil society.

NETAJI NAGAR COLLEGE FOR WOMEN

DEPARTMENT OF PHILOSOPHY

CORE-COURSE OUTCOMES

PHILOSOPHY (HONOURS)

**SEMESTER-V**

PHIA-CC-11: NYAYA LOGIC AND EPISTEMOLOGY-I

It developed logical realism. Students can acquire true knowledge of reality which is based on logical ground not mere on intuition or faith. Also create a sense of spiritualism in the mind of the students

PHIA-CC-12: ETHICS (INDIAN)

The study of ethics helps students to get the ability so that they can make themselves to become a proper social being. They will get to know the fundamental theories of Indian ethics and cultures, such as four values of human being Varnasrama Dharma etc.

PHIA-DSE-A (1): PHILOSOPHY OF LANGUAGE (INDIAN)

Students can learn the relationship between nature of language and the world. It develops an idea fundamental properties of being with nature. It help students to explore the sources, nature, limits and criteria of knowledge.

PHIA-DSE-B (1): AN ENQUIRY CONCERNING HUMAN UNDERSTANDING: HUME

Hume is regarded as one of the most influential empiricist philosopher. Though he seemed as an extreme empiricist philosopher but from his writing it is evident that he appeals to mankind that we should behave human being first, then one can be a philosopher. Hume could be a constructive, since he accounted for human understanding of nature, it help students about knowing the understanding of human nature.

**SEMESTER-VI**

PHIA-CC-13: NYAYA LOGIC AND EPISTEMOLOGY -II

Nyaya logic is a study that develops the knowledge of reasoning in students, to determine the validity of arguments. It enables students to face different competitive examinations.

PHIA-CC-14: ETHICS (WESTERN)

Ethics, being a normative study gives ideas about what is right and what is wrong in human actions. Its sole aim is to promote human virtue in conformity with certain

moral standards. The study of ethics can promote a sense of duty and responsibility among the students.

#### **PHIA-DSE-A (2): APPLIED ETHICS**

Being an ethico-political discipline APPLIED ETHICS is a valuable tool to get the Knowledge of human rights and values, and as such it is helpful in preparing for different competitive examinations.

#### **PHIA-DSE-B (2): M.K.GANDHI**

Truth, non-violence, sarvadaya, satyagraha and their significance constitute Gandhian Philosophy and the four pillars of Gandhian thought. Gandhian ideology formed overall development of students that can help them in their practical life which can be articulated, tested and transformed.

### **PHILOSOPHY (GENERAL)**

#### **SEMESTER-V**

##### **PHIG-DSE-A: ETHICS (INDIAN AND WESTERN)**

Ethics is a study of considering human actions to be right or wrong. It can create in students of what is good or right in human conduct and it enables students to become a better human being.

##### **PHIG-SEC: BUSSINESS ETHICS**

It is a form of professional ethics, ethics is normative science. But the application of ethics in practical life especially in business we need codes of ethics which ensure an organization to run smoothly. It guides us with the principles of ethics like loyalty, fairness, integrity, trust.

#### **SEMESTER-VI**

##### **PHIG-DSE-B (A): APPLIED ETHICS AND PHILOSOPHY OF RELIGION**

Being an ethico-political discipline APPLIED ETHICS is a valuable tool to get the Knowledge of human rights and values, and as such it is helpful in preparing for different competitive examinations. A study of religion philosophy promotes a sense of spiritualism in students. It is helpful for civil service examinations.

##### **PHIG-SEC-MAN AND ENVIRONMENT**

Environmental philosophy is the discipline in philosophy that studies the moral relationship between human beings and nature, as well as the value and moral status of environment. Study of environmental philosophy teaches the students how to conserve our world and manage our natural resources to meet our increasing needs and wants.

**Department of Physics**  
**Netaji Nagar College for Women, Kolkata-700092**

**PROGRAMME SPECIFIC OUTCOMES OF PHYSICS GENERAL:**

**Completion of Physics general course would provide the opportunity to the students:**

- To understand the basic laws and explore the fundamental concepts of physics
- To understand the concepts and significance of the various physical phenomena.
- To carry out experiments to understand the laws and concepts of Physics.
- To apply the theories learnt and the skills acquired to solve real time problems.
- To enhance the student's academic abilities, personal qualities and transferable skills this will give them an opportunity to develop as responsible citizens.
- This course introduces students to the methods of experimental physics. Emphasis will be given on laboratory techniques specially the importance of accuracy of measurements.
- Providing a hands-on learning experience such as in measuring the basic concepts in properties of matter, heat, optics, electricity and electronics.

**Department of Physics**  
**Netaji Nagar College for Women, Kolkata-700092**

**1. Course Outcome of Physics General (Under CBCS)**

Sl.	Semester	Course Code/Paper Code PHSG	Course Name	Course Outcome
1.	Sem-1	PHS-G-CC-1-1-TH	Mechanics (Theory)	<ul style="list-style-type: none"> <li>To understand the behaviour of physical bodies it provides the basic concepts related to the motion of all the objects around us in our daily life.</li> <li>The course builds a foundation of various applied field in science and technology; especially in the field of mechanical engineering.</li> <li>To study vectors, laws of motion, momentum, energy, rotational motion, gravitation, fluids, elasticity and special relativity.</li> </ul>
		PHS-G-CC-1-1-P	Mechanics (Practical)	<ul style="list-style-type: none"> <li>Students would perform basic experiments related to mechanics and also get familiar with various measuring instruments would learn the importance of accuracy of measurements.</li> </ul>
2.	Sem-2	PHS-G-CC-2-2-TH	Electricity and Magnetism (Theory)	<ul style="list-style-type: none"> <li>It gives an opportunity for the students to learn about one of the fundamental interactions of electricity and magnetism, both as separate phenomena and as a singular electromagnetic force.</li> <li>The course contains vector analysis, electrostatics, magnetism, electromagnetic induction and Maxwell's equations.</li> <li>The course is very useful for the students in almost every branch of science and engineering.</li> </ul>
		PHS-G-CC-2-2-P	Electricity and Magnetism (Practical)	<ul style="list-style-type: none"> <li>Students would gain practical knowledge about electricity and magnetism and measurements such as: Resistance, Voltage, current etc.</li> </ul>
3.	Sem-3	PHS-G-CC-3-3-TH	Thermal Physics and Statistical Mechanics (Theory)	<ul style="list-style-type: none"> <li>To understand the basic physics of heat and temperature and their relation with energy, work, radiation and matter. The students also learn how laws of thermodynamics are used in a heat engine to transform heat into work.</li> <li>The course contains the study of laws of thermodynamics, thermodynamic description of systems, thermodynamic potentials, kinetic theory of gases, theory of radiation and statistical mechanics.</li> </ul>

		<b>PHS-G-CC-3-3-P</b>	<b>Thermal Physics and Statistical Mechanics (Practical)</b>	<ul style="list-style-type: none"> <li>Students would gain practical knowledge about heat and radiation, thermodynamics, thermo emf etc. and perform various experiments.</li> </ul>
		<b>SEC A-2 (PHS-A SEC-B-TH)</b>	<b>Renewable energy and Energy Harvesting (Theory)</b>	<ul style="list-style-type: none"> <li>After completion of the course, every student is exposed to various wastes recycling and renewable energy based efficient technologies. Practical exposure to analyse basic parameters of waste and waste management techniques is also provided.</li> </ul>
<b>4.</b>	<b>Sem-4</b>	<b>PHS-G-CC-4-4-TH</b>	<b>Waves and Optics (Theory)</b>	<ul style="list-style-type: none"> <li>The course comprises of the study of superposition of harmonic oscillations, waves motion (general), oscillators, sound, wave optics, interference, diffraction, polarization.</li> <li>The course is important for the students to make their career in various branches of science and engineering, especially in the field of photonic engineering.</li> </ul>
		<b>PHS-G-CC-4-4-P</b>	<b>Waves and Optics (Theory)</b>	<ul style="list-style-type: none"> <li>The practical knowledge of wave motion doing experiments: Tuning fork, electric vibrations. They would also learn optical phenomena such as interference, diffraction and dispersion and do experiments related to optical devices: Prism, grating, spectrometers</li> </ul>
		<b>PHS-A SEC-B -TH</b>	<b>Electrical Circuits and Network skills (Theory)</b>	<ul style="list-style-type: none"> <li>To understand the unknown elements of a circuit, such as voltage, current, resistance, impedance, power, among others, across its component.</li> <li>To understand the electrical quantities, relationships, theorems, and some essential laws.</li> </ul>

## 2. Course Outcome of Physics General (Under Old Syllabus)

Sl.	Part	Course Code/Paper Code PHSG	Course Name	Course Outcome
1.	Part-III	IVA	Application of Thermodynamics, Energy Sources, Electronics, Communications	<ul style="list-style-type: none"> <li>To understand production and measurement of high vacuum and working mechanism of different engines, pumps etc. around us in our daily life.</li> <li>The course builds a foundation of various applied field in conventional and non-conventional energy resources.</li> <li>To understand digital electronics applications, cathode-ray oscilloscope, digital multimeter, L and C measurements.</li> </ul>
		IVB	Laboratory	<ul style="list-style-type: none"> <li>Students would perform basic projects or experiments related to OP-AMP, ammeter-voltmeter conversion and Phototransistor construction and practical applications possibilities.</li> </ul>
			Computer Lab	<ul style="list-style-type: none"> <li>To understand and familiarise with the hardware and the operating system and to solve simple problems by programming in C or FORTRAN.</li> </ul>

**Department of Physics**  
**Netaji Nagar College for Women, Kolkata-700092**

**Course Outcome of Physics General (Under CBCS) (5<sup>th</sup> and 6<sup>th</sup> Semester)**

Sl.	Semester	Course Code/Paper Code PHSG	Course Name	Course Outcome
1.	Sem-5	DSE A (2) PHS-G-DSE-A-TH	Modern Physics	<ul style="list-style-type: none"><li>• To understand Radiation and its nature (Black body radiation).</li><li>• Knowledge about fundamental of Quantum Mechanics and Special Theory of Relativity.</li><li>• Understanding about Lasers and its applications.</li></ul>
2.	Sem-6	DSE B (2) PHS-G-DSE-B-TH	Nuclear & Particle Physics	<ul style="list-style-type: none"><li>• To understand General Properties of Nuclei, Nuclear Models, Radioactivity, Nuclear Reactions, Detector for Nuclear Radiations.</li><li>• Knowledge about Particle Accelerators and fundamental particles and their families.</li></ul>

### B.Sc. (Honours) in PHYSIOLOGY Programme Specific Outcome:

The undergraduate Honours syllabus in Physiology under the University of Calcutta is so versatile that a student, graduated with Honours in Physiology may find himself / herself suitable in most of the fields of Biological Sciences. Perhaps the Undergraduate Board of Studies in Physiology do not want to lose the essence of the age old subject in the recent days of modernization. Thus, the syllabus is designed in such a way that a student reads old experimental approaches viz. localization of motor cortex, respiratory center in one semester along with cutting edge techniques viz. polymerase chain reaction, western blot etc. in other semesters. The undergraduate Honours Syllabus in Physiology represents the finest example of the combination of old and new knowledge. The undergraduate honours programme specific outcomes are discussed below:

On successful completion of Undergraduate Honours Course in Physiology or B.Sc. Honours in Physiology (3 years), a student –

PSO.1: Should have gained knowledge in Physiology through theory and practical classes.

PSO.2: Should have gained hands on training on biochemical experiments.

PSO.3: Should have learnt the basic principles of advance analytical methods.

PSO.4: Should have developed research oriented skills.

PSO.5: Should have received training to finish assignments within time.

PSO.6: Should have gained knowledge on data collection, statistical analyses and data interpretation.

PSO.7: Should be able to nurture the zeal to serve the society.

PSO.8: Should have gained sufficient knowledge to serve in the government organizations such as Defense Research and Development Organisation (DRDO), All India Institute of Medical Sciences (AIIMS), National Institute of Science Education and Research (NISER), Indian Institute of Technology (IITs), National Institute of Technology (NIT), Sports Authority of India (SAI) and various other institutes of academic excellence in the capacity of Scientist, Research Associate, Research Assistant, Project staff etc. The students have similar opportunities in the private sectors such as R & D sections, research and analysis wings of Pharmaceutical companies, sales and marketing of pharmaceutical products, nutritional supplements, prosthetics etc. The graduate students of Physiology have an edge over other Biological Sciences or Life Science graduates, if they proceed for professions like Sports Physiologist, ECG or EEG technician, Physiotherapist, Medical Imaging laboratory technician, Operation Theater technician, Assistant in Neurophysiology Laboratory, Optometrist, Audiology and Speech therapist etc. which are essentials in hospitals, diagnostic labs and other health sectors.

B.Sc. (General) in PHYSIOLOGY Programme Specific Outcome:

The Undergraduate General Syllabus in Physiology under the University of Calcutta is so designed that it can complement other subjects to enrich the knowledge of a student pursuing B.Sc. General (3years) course. The course is flexible and allows students to learn theoretically and also to achieve some practical skills. The student should be able to utilize the knowledge which would help them to establish themselves in future. The programme specific outcomes are outlined below:

On successful completion of Undergraduate General Course in Physiology or B.Sc. General in Physiology (3 years), a student –

PSO.1: Should be able to gain knowledge on structure and function of different parts of human body.

PSO.2: Should have developed understanding to detect early signs of any abnormality which arises due to a pathology in the human body.

PSO.3: Should have gained sufficient knowledge to serve in the government or private sector such as diagnostic laboratories, hospitals, forensic laboratories under Ministry of Health and pharmaceutical companies, research & development sectors, sales & marketing department in the privates sectors for employability.

-----

<u>Semester / Year of studies</u>	<u>Course ID &amp; Title</u>	<u>Outcomes</u>  After completion of these courses students should be able to;
<b>SEMESTER - I (Honours)</b>	CC-1: Cellular Basis of Physiology, Genetics & Enzymes	CO.1: Explain the structure and functions of an animal cell and its organelles. CO.2: Understand genetic inheritance. CO.3: Gain knowledge on biological catalysts and their mechanism of actions.
	CC-2: Biophysical Principles and Chemistry of Biomolecules	CO.1: Understand the biophysical properties of biomolecules. CO.2: Follow the chemical nature of biomolecules in depth.
<b>SEMESTER – I (General)</b>	CC-1 / GEN-1: Cellular Basis....Digestion, Absorption & Metabolism	CO.1: Explain the structure and functions of an animal cell and its organelles. CO.2: Understand genetic inheritance. CO.3: Gain knowledge on biological catalysts. CO.4: Understand the biophysical properties & chemical nature of biomolecules. CO.5: Understand digestion, absorption & metabolism in brief.
<b>SEMESTER - II (Honours)</b>	CC-3: Cell signaling & Nerve-muscle Physiology	CO.1: Understand how the exogenous and endogenous molecules can exert structural and functional changes within a cell. CO.2: Follow the structure & function of nerve, muscle and the underlying molecular mechanism of muscular contraction.
	CC-4: Nervous System	CO.1: Understand the most sophisticated controlling mechanism present in human body – The Nervous System. CO.2: Follow different functions of the nervous system. CO.3: Identify different parts of the nervous system associated with higher functions, such as emotion, sleep, speech etc.
<b>SEMESTER – II (General)</b>	CC-2 / GEN-2: Blood body fluids, Cardiovascular & Respiratory System	CO.1: Follow the composition and function of Blood. CO.2: Gain knowledge about the anatomy & function of heart and vasculature. CO.3: Understand the anatomy and functions of respiratory system.

<b>SEMESTER – III (Honours)</b>	CC-5: Blood and Body Fluids	CO.1: Understand the composition and primary functions of blood, such as maintenance of homeostasis, transport, coagulation, blood grouping etc.
	CC-6: Cardiovascular System	CO.1: Understand anatomy of heart, structure of blood vessels, their normal functionality and pathology.
	CC-7: Respiratory System	CO.1: Follow the anatomy of lung, its function and the overall mechanism of respiration, including gaseous exchange, non-respiratory functions etc.
	SEC-A1: Hematological Technique  OR  SEC-A2: Clinical Biochemistry	CO.1: Perform different experiments such as blood grouping and interpreting the results of different experiments viz. thalassemia screening, TC, DC, ESR etc.  OR  CO.1: Perform and analyses the result of different biochemical tests, which includes blood, urine and body fluids.
<b>SEMESTER – III (General)</b>	CC-3 / GEN-3: Nerve-muscle Physiology..... Special Senses	CO.1: Follow different functions of the nervous system. CO.2: Understands the functions of Vision, Audition, Gustation, Olfaction.
	SEC-A1: Microbiology & Immunology  OR  SEC-A2: Clinical Biochemistry	CO.1: Follow the basic principles of Bacteriology, Virology, mycology, parasitology & Immunology.  OR  CO.1: Perform and analyses the results of different biochemical tests.
	CC-8: Digestion and Metabolism	CO.1: Understand the anatomy and functions of digestive System. CO.2: Gain knowledge on energy metabolism and generate a brief idea on system biology.
	CC-9: Molecular	CO.1: Acquire knowledge in depth on genetic material

<b>SEMESTER – IV (Honours)</b>	Biology	<p>present in a living cell.</p> <p>CO.2: Understand how the genetic material is inherited, duplicated, transcribed and translated in several thousands of proteins with in cell.</p> <p>CO.3: Gather information on different regulators of genes, recombinant DNA technology, genetic engineering and the associated techniques.</p>
	CC-10: Nutrition Dietetics Public Health	<p>CO.1: Acquire an overall idea about nutrition.</p> <p>CO.2: Understand the importance of different components of balanced diet and their significances.</p> <p>CO.3: Prepare diet charts for normal individuals and for persons suffering from different disease conditions, such as diabetes, hypertension etc.</p>
	<p>SEC-B1: Detection of Food Additives / Adulterants &amp; Xenobiotics</p> <p>OR</p> <p>SEC-B2: Bioinformatics</p>	<p>CO.1: Perform different tests in order to detect different adulterants in common food stuffs, either added inadvertently or for business purpose.</p> <p>OR</p> <p>CO.1: Perform simple and complex analyses of different data sets, Pattern searching, analyses and interpretation.</p> <p>CO.2: Apply different bioinformatics tools such as FASTA, BLAST etc.</p>
<b>SEMESTER – IV (General)</b>	CC-4 / GEN-4: Endocrinology, Reproductive & Excretory Physiology	<p>CO.1: Understand in brief the most ancient regulatory mechanism present in the human body.</p> <p>CO.2: Gain knowledge on reproductive system.</p> <p>CO.3: Develop understanding on different excretory pathways, homeostasis, body water balance etc.</p>
	<p>SEC-B1: Detection of Food Additives / Adulterants &amp; Xenobiotics</p> <p>OR</p> <p>SEC-B2: Community Health &amp; Formulation of Diet Charts</p>	<p>CO.1: Gain knowledge on food adulterants and associated health hazards.</p> <p>CO.2: Acquire information on xenobiotics &amp; its metabolism.</p> <p>OR</p> <p>CO.1: Understand what a community is and the related health issues.</p> <p>CO.2: Identify problems of higher population, issues with family planning, ART etc. Principles of formulation of diet charts for normal, pregnant and lactating mothers are an important component of the course.</p>

<b>PART – III (Honours – Old Syllabus)</b>	Paper-V: Unit-09	<p>CO.1: Gain a thorough knowledge on endocrinology which includes chemical composition and mechanism of hormone action, and their effects on human body. Students will also be acquainted with the conditions arise due to the hypo and hyperactivity (pathology) of the endocrinal glands.</p> <p>CO.2: Understand biological rhythms which is influenced by the environmental cues and internal biological clock. Study of biological rhythm is essential to understand sleep-wake fullness cycle, jet lag and many other events experienced in our day to day life.</p>
	Paper-V: Unit-10	<p>CO.3: Acquire knowledge on reproductive system in depth.</p> <p>CO.4: Develop an understanding on how an embryo forms grows from one cell stage to an adult individual with billions of cells.</p> <p>CO.5: Understands the proper importance of balanced diet for growth, development and activities.</p> <p>CO.6: Gain knowledge on communities and take appropriate steps to intervene community based health issues.</p>
	Paper-VI: Unit-11	<p>CO.1: Understand the harmonious relation among man, instrument and workplace, which also mitigates the risk of professional health hazards.</p> <p>CO.2: Follow the physiology behind different types of sports, which enables the students to understand and frame the training procedure for individual sports personnel.</p> <p>CO.3: Gain knowledge on body temperature control and learn to act on different environmental cues.</p>
	Paper-VI: Unit-12	<p>CO.4: Gain a thorough knowledge on the basic principles of bacteriology, virology, mycology, parasitology &amp; immunology.</p> <p>CO.5: Acquire knowledge on human body and drug interaction and other concepts such as therapeutic dose, efficacy, biotransformation, LD<sub>50</sub>, ED<sub>50</sub> etc.</p> <p>CO.6: Gain knowledge on statistical methods which include data analysis, hypothesis testing, data interpretation etc.</p>
	Paper-VII: Unit-13 (Practical)	<p>CO.1: Perform biochemical tests for blood sugar, serum protein, serum urea etc.</p> <p>CO.2: Perform and understand the effects of different ions on the normal activity of mammalian heart.</p> <p>CO.3: Perform gram staining for bacteria and interpret it accordingly.</p>

	Paper-VIII: Unit-14 (Practical)	<p>CO.1: Perform histological staining of normal mammalian tissues and interpret it.</p> <p>CO.2: Perform and demonstrate the normal intestinal movements and effect of different drugs on the intestinal movement of mammalian tissue.</p> <p>CO.3: Perform different human experiments including blood pressure measurement, anthropometric measurements, calculation of body surface area, body mass index etc.</p>
<b>PART – III (General – Old Syllabus)</b>	<p>Paper – IVA:</p> <p>&amp;</p> <p>Paper – IVB:</p>	<p>CO.1: Develop idea about hematology, biochemistry, molecular biology, microbiology &amp; immunology, social physiology, work physiology, environmental physiology and biostatistics.</p> <p>&amp;</p> <p>CO.1: Perform hematological experiments which includes TC, DC, bleeding &amp; coagulation time, blood grouping etc.</p> <p>CO.2: Perform biochemical tests which includes detection of normal constituents in urine.</p> <p>CO.3: Determine some common anthropometric parameters including height, weight, BMI etc. as part of human experiments.</p>

<u>Semester / Year of studies</u>	<u>Course ID &amp; Title</u>	<u>Outcomes</u>  After completion of these courses students should be able to;
<b>SEMESTER - V (Honours)</b>	CC-11: Special senses	CO.1: Develop understanding about the structural and functional aspects of organs responsible for vision, hearing, taste and smell. CO.2: Acquire knowledge on different testing methods for early detection of reduced functionality of the said organs for own benefits and the society.
	CC-12: Endocrinology	CO.1: Understand the importance of endocrinal glands present in the human body. CO.2: Acquire knowledge about the normal physiological functions and pathology.
	DSE-A1: Biostatistics  OR  DSE-A2: Microbiology & Immunology	CO.1: Gather knowledge on the statistical parameters and methods. CO.2: Perform different statistical tests to analyze and interpret biological data.  OR  CO.1: Acquire knowledge on micro-organisms like bacteria and viruses. CO.2: Understand host- pathogen interaction that occur in human body.
	DSE-B1: Work, Exercise & Sports Physiology  OR  DSE-B2: Advanced Molecular Biology	CO.1: Develop idea about the physiological basis of work, bioenergetics, principles and application of training.  OR  CO.1: Acquire theoretical and practical knowledge on the cutting edge technologies used in the field of molecular biology.
<b>SEMESTER – V (General)</b>	DSE-A1: Biological Statistics  OR  DSE-A2: Hematology	CO.1: Gather brief knowledge on the statistical parameters and methods. CO.2: Perform statistical tests for physiological parameters.  OR  CO.1: Understand the composition and primary functions of blood and different components of blood.

<b>SEMESTER – VI (Honours)</b>	CC-13: Reproductive Physiology & Developmental Biology	CO.1: Develop understanding about the reproductive functions of human body. CO.2: Gain knowledge on developmental biology.
	CC-14: Excretory Physiology	CO.1: Develop knowledge on the excretory organs and their functions in human body.
	DSE-A3: Ergonomics  OR  DSE-A4: Community & Public Health	CO.1: Develop a brief idea about ergonomics, human machine interaction and environmental ergonomics.    CO.1: Address community and public health issues.
	DSE-B3: Chronobiology & Stress Physiology  OR  DSE-B4: Toxicology & Pharmacology	CO.1: Gain knowledge on different biological rhythms and its implication in human body.   OR  CO.1: Develop understanding about Pharmacokinetics and Pharmacodynamics, drugs, toxins etc.
<b>SEMESTER – VI (General)</b>	DSE-B1: Work, Exercise & Sports Physiology  OR  DSE-B2: Human Nutrition & Dietetics	CO.1: Develop the knowledge on the physiological basis of sports and training.   OR  CO.1: Develop basic concepts on the nutritive values of common food stuffs, prepare diet chart for normal human individual.

#### PROGRAM OUTCOME: POLITICAL SCIENCE HONOURS (SEMESTER SYSTEM)

The courses help students to

PO1. Acquire an in-depth knowledge about the origin and evolution of the subject.

PO2. Both the empirical and value- based approaches to the study of Political Science encourages a student to take into consideration the existing facts and the prevalent values while solving a problem.

PO3. Encourage students to generate research questions by themselves on the basis of certain existing facts and analyse the same to arrive at problem specific solutions.

PO4. Inculcate interest among students not only on the topics covered, but also on other associated sub topics, and encourage them to undertake broader analysis beyond text books, through departmental webinars and students' curricular activities like poster presentation etc.

PO5. The course offers multi dimensional career option for students with varied interests like Teaching (School Service Commission, National Eligibility Test, State Level Eligibility Test etc.), Administration (WBCS, IAS,IFS and IPS ), Consulate Services, media jobs (print and electronic) etc.

#### PROGRAM SPECIFIC OUTCOME:

PSO1. Respect for laws and the Constitution: Enables students to acquire thorough knowledge about the laws and the Constitution of India, make a comparative study of the Constitution with that of other countries and thereby generate respect for the same.

PSO2. Consciousness about social problems: The DSE papers help to generate awareness about the various social security threats our country is suffering from, like problems of caste, communalism, gender inequalities etc. and make a comparative study with that of other countries.

PSO3. Generating Awareness about the working of various Government institutions and the Parliament: The SEC papers disseminate detailed information about various government institutions like the functions of the Panchayat System, District Courts or Fast- Track Courts etc., thereby creating well informed citizens.

-----

#### PROGRAM OUTCOME: POLITICAL SCIENCE GENERAL (SEMESTER SYSTEM)

The course help to

PO1: Generate Respect for the Motherland and the Constitution: A detailed study of the background and the evolution of the Constitution and the provisions incorporated therein, students become aware of the rights the citizens of the country are entitled to, creating a sense of oneness and respect for the Constitution.

PO2: Create Social Awareness: Make students aware of the prevalent social evils like caste, class, communal problems and gender inequalities plaguing the country at present and try to apply the solutions at micro level, for example in a particular locality or within the family.

PO3: Strive to achieve social harmony: Enabling students to identify the various sources of disharmony in society like caste and religion, the students strive to overcome the issues to cultivate a spirit of social harmony.

PO4: Strives to enhance mental agility and a spirit of investigation among students through departmental webinars and various students' curricular activities like poster making, tutorial projects etc.

PO5: Opportunities for Higher studies and Job Prospects: The course provides various job opportunities like teaching (can appear for School Service Commission Entrance Examination and Primary School teaching), administrative jobs (Can appear for competitive examinations like WBCS, IAS or IPS), jobs in media, both print and technology, service to various NGOs etc.

#### PROGRAM SPECIFIC OUTCOME: POLITICAL SCIENCE GENERAL

PSO1: Political Education: The curriculum include topics like political parties and pressure groups in India and other countries of the world, the various methods of election etc. , thus helping to develop politically educated citizens.

PSO2: The DSE paper: The curriculum of the DSE paper of semester 1 becomes all the more significant in the backdrop of a woman's college as it deals with topics like patriarchy and sex-gender debate and how it manifests itself in the context of family , state and community. The syllabuses make students aware of the women's movements and help to generate consciousness about the various injustices towards women in the form of violence against women, visible and invisible labour etc.

PSO3: The Sec papers: deal with various elementary concepts like research design and purpose of research, techniques of data collection and statistical data analysis etc. thus, preparing them for job opportunities in media and NGOs.

---

PROGRAM OUTCOME: POLITICAL SCIENCE GENERAL, (1+1+1 SYSTEM)

The course help students to

PO1: Generate respect and love for the Motherland: Uphold the lofty ideals of our country like anti - colonialism, anti –racism, non alignment etc and thereby generate respect for the Motherland.

PO2: Garner knowledge about the developments of major concepts in the international arena in the context of India: Create awareness about the merits and demerits of globalization with special reference to India, an idea of the concept of Human rights and its prospects and violations in India etc.

PO3: Ability to protect the rights of others through knowledge gathered: The curriculum includes the functions of the State and National Human Rights Commission which enables the students to redress their grievances to the concerned authorities and help others to do the same.

PO4: Inculcating the value of peace: The course includes the role of United Nations in the maintenance of world peace and the significant role played by India therein, thus motivating students to value the importance of peace and peaceful coexistence.

PO4: Understanding the present role played by India in the international political arena: On the basis of the idea formed from the topics included in the course on the determinants of India's Foreign Policy the students can understand and analyse India's role in global affairs.

The course also points out the various factors which determine the Foreign Policy of a country in general and that of India in particular, with the help of examples.</p> <p><b>CO2:</b> Analyses the role of national interest as a key concept in foreign policy.</p> <p><b>CO3:</b> Discuss the three main instruments of foreign policy, i.e, diplomacy, propaganda and military, drawing examples from certain political developments of the past and present.</p> <p><b>CO4:</b> Attempts to trace the evolution of Indian Foreign Policy.</p> <p><b>CO5:</b> Make students well aware of the basic principles of Indian Foreign Policy.</p> <p><b>CO6:</b> Help students to acquire detail information about the foreign policy stand towards Pakistan, Bangladesh, Nepal, Bhutan and Srilanka with special reference to political developments in the past and present.</p>
2.		SEC 3 A(1)	<i>Legal Literacy</i> (2 Credits) Full Marks 100	<p><b>CO1:</b> Becomes aware of the concept and major processes of detention, Arrest, Search Bail etc.</p> <p><b>CO2:</b> Becomes well acquainted with the history of Indian Penal Code and certain major aspects like protection of Primary and Secondary Personal Rights, Criminal Conspiracy, Offences against the State and those relating to marriage etc .</p> <p><b>CO3:</b> Becomes aware about certain important laws like Anti Terror Laws, Human Rights Laws and Consumer Rights Laws.</p>

**Netaji Nagar College for Women**  
**Department of Zoology**  
**PROGRAM SPECIFIC OUTCOME**

The scope of **Zoology** as a subject is very broad. Graduates of the **B.sc Zoology program** are expected to:

**PSO1.** Gain theoretical in-depth knowledge on the key areas of study within the disciplinary/subject area of Zoology that comprise - animal diversity, principles of ecology, comparative anatomy and developmental biology of vertebrates, physiology and biochemistry, genetics and evolutionary biology, animal biotechnology, applied zoology, behavior, immunology, reproductive biology, and insect, vectors and diseases.

**PSO2.** Become technically competent to perform various experiments that are covered in the curriculum.

**PSO3.** Acquire capability for asking relevant/appropriate questions relating to issues and problems in the field of Zoology, besides understanding, analysing and interpreting data generated in life sciences related experiments or investigations.

**PSO4.** Develop effective communication skills for the dissemination of scientific knowledge relating to Zoology in a clear and concise manner through written, oral and multimedia/technology-based formats.

**PSO5.** Look for engagements in industry and commercial activities employing Life Sciences, Molecular Biology and Biotechnology. They may also be interested in entrepreneurship and start some small business based on their interest and experience.

**PSO6.** Look forward to a career/ profession related to Zoology, including research and development, teaching, government/ public service or even private sectors.

**Netaji Nagar College for Women**  
**Department of Zoology**  
**COURSE OUTCOME (Zoology Honours)**

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
1.	I	SEM-I	CC 1  CC1-1-TH	Non-Chordates I: Protists to Pseudocoelomates  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Provide basic knowledge about Taxonomic rules of animal Classification. <b>Unit 2:</b> Learn about Protozoans with Classification up to phylum, Life cycle and pathogenicity of selected protozoan Parasites. Evolutionary significance of Metazoa. <b>Unit 3:</b> Classification of Porifera upto classes, with general idea on it & its canal system. <b>Unit 4:</b> Basic information on Cnidarians along with its classification upto classes, Metagenesis, Coral reef, formation & significance. <b>Unit 5:</b> General idea on Ctenophora. <b>Unit 6:</b> Basic information on Platyhelminthes along with its classification upto classes. Life cycle, pathogenicity & control measure of selected Platyhelminth Parasites. <b>Unit 7:</b> General Characters, Classification of Nematodes upto classes. Life cycle, pathogenicity & control measure of selected Parasitic nematodes. Parasitic adaptation of Helminthes.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
2.	I	SEM-I  Full Marks: 30 Credit: 2	CC1-1-P	Non-Chordates I: Protists to Pseudocoelomates Lab	Study of whole mount of selected Protozoans. Identification with reason & Systematic position of selected Protists to Pseudocoelomates. Staining/mounting of any protozoa/helminth.

Overall Outcome of the course CC1-1:	<b>CO1.</b> Clear idea on Basic classification concept. <b>CO2.</b> Familiarity with the non- chordate world surrounding us & its importance. <b>CO3.</b> Developing student's ability to identify the invertebrates and classify them up to the class level on the basis of systematic position. <b>CO4.</b> Appreciating the process of evolution (unicellular cells to complex, multi cellular organisms). <b>CO5.</b> Understand the basis of life processes in the non-chordates. <b>CO6.</b> Awareness among students about coral reefs & its impact on our environment. <b>CO7.</b> Awareness among students on various important parasites and diseases spread by them in human with the help of study of host-parasite relationship. <b>CO8.</b> Understand various diseases causing vectors like Mosquitoes.
---	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
3.	I	SEM-I	CC 2 CC1-2-TH	Molecular Biology  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Basic knowledge on Nucleic Acids. <b>Unit 2:</b> Basic information on DNA replication, RNA priming. <b>Unit 3:</b> Mechanism of Transcription. <b>Unit 4:</b> Idea on Genetic code and Translation. <b>Unit 5:</b> Detailed knowledge on processing of RNA including RNA editing. <b>Unit 6:</b> Study about gene regulation. <b>Unit 7:</b> DNA repair mechanisms found in Prokaryote and eukaryotes. <b>Unit 8:</b> Idea about several molecular techniques.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
4.	I	SEM-I  Full Marks: 30 Credit: 2	CC1-2-P	Molecular Biology Lab	Study of polytene, lampbrush chromosomes, how to isolate and quantify genomic DNA and run Agarose gel and stain nucleic acids in histological slides.

Overall Outcome of the course CC1-2:	Students will be able to develop: <b>CO1.</b> Clear concept about structure, features, types and properties of Nucleic acids. <b>CO2.</b> Understanding the process and mechanism of replication, transcription and translation of Nucleic acids in both prokaryotes and eukaryotes. <b>CO3.</b> Theoretical knowledge on advanced molecular techniques that are currently in use in various laboratories. <b>CO4.</b> Concept about RNA modifications. <b>CO5.</b> Idea about how operons function, DNA repaired in case of any damage. <b>CO6.</b> Practical knowledge on how genomic DNA can be isolated from tissues and visualized.
---	--

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
5.	I	SEM-II	CC 3 CC2-3-TH	Non-Chordates II – Coelomates  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Gather knowledge on evolution of coelom. <b>Unit 2:</b> Basic information on Annelids along with its classification upto classes, Metamerism, Excretion procedure through nephridia. <b>Unit 3:</b> Classification of Arthropoda upto classes, with general idea on it & Respiration, vision, metamorphosis & social life of selected arthropods. <b>Unit 4:</b> General characters & evolutionary significance of Onychophore. <b>Unit 5:</b> Basic information on Molluscs along with its classification upto classes. Feeding respiration, torsion & nervous system of a selected one belong to Phylum Mollusca.

					<b>Unit 6:</b> Basic information & Classification of Phylum Echinodermata upto classes, Water vascular system in selected one, Echinoderm larva & their affinities with Chordates.
					<b>Unit 7:</b> Hemichordates a brief idea, Relationship of it with both chordates & non chordates.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
6.	I	SEM-II Full Marks: 30 Credit: 2	CC2-3-P	Non-Chordates II – Lab	Study of selected Annelids, Arthropods, Mollusca & Echinoderms. Anatomy study of selected invertebrates.

Overall Outcome of the course CC2-3:	<b>CO1.</b> Clear idea on the process of evolution (non-coelomate to coelomates), formation of complex body organization than previous phylum & on the door step to form chordates next. <b>CO2.</b> Familiarity with the chordate world surrounding us, their importance, special features & affinities with chordates according to their evolutionary status. <b>CO3.</b> Developing student's ability to identify the invertebrates and classify them up to the class level on the basis of systematic position. <b>CO4.</b> Understand the basis of life processes in the non-chordates.
---	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
7.	I	SEM-II	CC 4  CC2-4-TH	Cell Biology  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Detailed study about plasma membrane structure, fluid mosaic model, different types of transporters and junctions. <b>Unit 2:</b> Description of the structure and functions of ER, Golgi apparatus, Lysosome and their involvement in protein sorting and mechanism of vesicular transport. <b>Unit 3:</b> Dealing with the structure of mitochondria and their functions on ETC, chemiosmotic hypothesis for ATP production. Brief idea on the structure of peroxisomes. <b>Unit 4:</b> Understanding the structure and function of cytoskeleton i.e microfilaments and microtubules which provides an important structural framework for cell shape. <b>Unit 5:</b> Studying the structure and function of nucleus with nuclear pore complex and nucleolus, how they store the genetic materials, how chromatin materials are packed as nucleosome. <b>Unit 6:</b> Detailed study on replication and reproduction of cells, any altered pathway leading to cancer, involvement of numerous genes in cell cycle regulations. Brief idea on the tumor suppressor gene and oncogenes. <b>Unit 7:</b> Studying and understanding various cell signaling mechanisms, detailed process of apoptosis.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
8.	I	SEM-II  Full Marks: 30 Credit: 2	CC2-4-P	Cell Biology – Lab	Studying various stages of mitosis, meiosis, permanent slide preparation for visualizing Barr body of human female, visualizing DNA and studying cell viability.

Overall Outcome of the course CC2-4:	<p><b>CO1.</b> Clear in-depth idea on different cellular structures, organelles and their function.</p> <p><b>CO2.</b> Demonstrate a thorough understanding of mechanism of cell cycle (also through practical by studying various stages from grasshopper testes).</p> <p><b>CO3.</b> Developing student's ability to identify the invertebrates and classify them up to the class level on the basis of systematic position.</p> <p><b>CO4.</b> Understand the basis of signal transduction and apoptotic process.</p>
--------------------------------------	--

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
9.	II	SEM-III	CC 5  CC3-5-TH	Chordata  Full Marks: 50 Credit: 4	<p><b>Unit 1:</b> Basic knowledge on Phylum Chordata.</p> <p><b>Unit 2:</b> Basic information on Protochordates along with its classification upto classes, Metamorphosis of Ascidia, Structure of Pharynx and Feeding mechanism of <i>Branchiostoma</i>.</p> <p><b>Unit 3:</b> Classification of Cyclostomes upto orders, with general idea on it.</p> <p><b>Unit 4:</b> General characters &amp; Classification of Pisces upto living Sub Classes. Knowledge on Fish migration, Parental care &amp; swim bladder.</p> <p><b>Unit 5:</b> General characters &amp; Classification of Amphibia upto living Orders. Knowledge on Amphibian metamorphosis, Paedomorphosis &amp; Parental care.</p> <p><b>Unit 6:</b> General characters &amp; Classification of Reptiles upto living Orders. Knowledge on Poisonous &amp; non-Poisonous snakes, differences, Poison apparatus &amp; biting mechanism.</p> <p><b>Unit 7:</b> General characters &amp; Classification of Aves upto living Sub Classes. Knowledge on Fish migration, Parental care &amp; swim bladder.</p> <p><b>Unit 8:</b> General characters &amp; Classification of Mammals upto living Sub Classes. Knowledge on Exoskeletal derivatives, Adaptive radiation with reference to locomotory appendages &amp; Echolocation in Micro chiropterans.</p>

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
10.	II	SEM-III  Full Marks: 30 Credit: 2	CC-3-5-P	Chordata Lab	Identification with Reasons of selected Protochordates, Chordates. Study of system (Brain & pituitary, digestive & Urinogenital) & its organization in <i>Tilapia</i> fish. Pecten study from Fowl head. Habitat or behavior study of animals.

Overall Outcome of the course CC3-5:	<p><b>CO1.</b> Imparts conceptual knowledge of Chordates, their adaptations, significance and associations in relation to their environment.</p> <p><b>CO2.</b> Developing student's ability to identify the Chordates and classify them up to the Sub Class/Order level on the basis of systematic position.</p> <p><b>CO3.</b> Understand the basis of life processes in the Chordates.</p> <p><b>CO4.</b> Increase interest to engage in animal study &amp; know its importance for us.</p> <p><b>CO5.</b> Recognize the importance of conservation.</p>
--------------------------------------	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
11.	II	SEM-III	CC 6  CC3-6-TH	Animal Physiology: Controlling and Co-ordinating System  Full Marks: 50 Credit: 4	<p><b>Unit 1:</b> To have a comprehensive knowledge on the types, structure, function and localization of the various tissues present in an animal body.</p> <p><b>Unit 2:</b> To understand the structure and the types of bone and cartilage, with an elaborate idea on the process of ossification.</p> <p><b>Unit 3:</b> To specifically understand the physiology of nervous system by studying the functioning, types and mode of communication between the structural units, neurons.</p> <p><b>Unit 4:</b> To have a thorough perception of the different types of muscle, their structure and characteristic feature of muscle fibres, and the molecular and chemical basis of muscle contraction.</p> <p><b>Unit 5:</b> To understand the histology of mammalian testis and ovary and broadly have knowledge of the physiology of mammalian reproduction, stressing on the menstrual and oestrous cycles.</p> <p><b>Unit 6:</b> To understand the histology and functions of the various endocrine glands. To be able to classify hormones basing on their chemical nature and mechanism of action.</p>

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
12.	II	SEM-III  Full Marks: 30 Credit: 2	CC3-6-P	Animal Physiology: Controlling & Coordinating Systems Lab	To have a hands-on training in preparing the temporary mounts and permanent slides of various tissues and in recording electrical stimulation from muscles. To be able to identify various tissues by studying the permanent slides.

Overall Outcome of the course CC3-6:	<b>CO1.</b> Imparts conceptual knowledge of several aspects of animal physiology like tissues, bones and cartilage, nervous system, reproductive system, endocrine and muscular system etc. <b>CO2.</b> Emphasizes the function and coordination of each of the systems. <b>CO3.</b> Practical training on Histology, permanent slide preparation technique. <b>CO4.</b> Detailed study of characters of different types of tissues.
--------------------------------------	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
13.	II	SEM-III	CC 7  CC3-7-TH	Fundamentals of Biochemistry  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Understand the structural analysis & classification of carbohydrates along with biological importance. Get knowledge on important carbohydrate metabolic pathways essential for a life. <b>Unit 2:</b> Structure & function of Fatty acids & derivatives. Understand the lipid metabolism process & Fatty acid biosynthesis procedure essential for a life. <b>Unit 3:</b> Basic knowledge on amino acids & its structure, classification, electrochemical properties, along with physical importances. Various metabolic pathways of proteins. <b>Unit 4:</b> Able to understand the structure & metabolism of nucleic acids. <b>Unit 5:</b> Gather knowledge on Classification, nomenclature, properties & controlling factors of an enzyme activity. <b>Unit 6:</b> Learn about Oxidative Phosphorylation, highly efficient energy production method for metabolic processes.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
14.	II	SEM-III  Full Marks: 30 Credit: 2	CC3-7-P	Fundamentals of Biochemistry Lab	Qualitative tests for carbohydrates, proteins and lipids, Qualitative estimation of Urea, uric acid & water-soluble protein by Lowry method, Paper chromatography of amino acids.

Overall Outcome of the course CC3-7:	<b>CO1.</b> Students will explain/describe the synthesis of proteins, lipids, nucleic acids, and carbohydrates and their role in metabolic pathways along with their regulation in physiological functioning of the organism. <b>CO2.</b> Understand biochemical mechanisms and kinetics. <b>CO3.</b> Interactions and interdependence of biochemical processes. <b>CO4.</b> Design a scientific process and employ the scientific method, demonstrating that biochemistry is evidence-based and grounded in the formal practices of observation, objective measurement, and hypothesis testing.
---	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
15.	II	SEM-III	SEC(A) -3-2-TH	Sericulture  Full Marks: 80 Credit: 2	<b>Unit 1:</b> Basic knowledge on Sericulture, types of Silk worms, Culture procedures, Mulberry & Non-Mulberry cultivation techniques. <b>Unit 2:</b> Biology of silk worms & Basic information on it including life cycle. <b>Unit 3:</b> Gives knowledge of silk worm rearing. <b>Unit 4:</b> Pests and Diseases associated with Silk worms Control & prevention of it. <b>Unit 5:</b> Entrepreneurship in Sericulture.

Overall Outcome of the course SEC(A) -3-2:	<b>CO1.</b> Learning on various methodologies and perspectives of Sericulture for the possibilities of self-employment. <b>CO2.</b> Gather knowledge on Life cycle, economic importance of Silk moths, its type, rearing method, cost, Host plants maintenance. <b>CO3.</b> Commercial value of Silk <b>CO4.</b> Problems & solutions related to sericulture.
--	--

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
16.	II	SEM-IV	CC 8 CC4-8-TH	Comparative Anatomy of Vertebrates  Full Marks: 50 Credit: 4	<b>Unit 1:</b> To thoroughly understand the structure, function and derivatives of the skin in various vertebrate classes. <b>Unit 2:</b> To be able to distinguish and elaborate the anatomy of the stomach in various vertebrate classes and to understand the dentition types in mammals. <b>Unit 3:</b> To be able to compare the respiratory organs in fishes, birds and mammals. <b>Unit 4:</b> To comprehend the basic plan of a chordate circulatory system with an elaborate idea on the evolution of heart and aortic arches in chordates. <b>Unit 5:</b> To understand the significance of the urinogenital system, in terms of the tripartite concept of development of kidneys and the evolution of the urino-genital ducts. <b>Unit 6:</b> to have an overview of the comparative account of the brain, cranial nerves, olfactory and auditory receptors in various vertebrate classes. <b>Unit 7:</b> To have a broad idea on the axial and appendicular skeleton, with special reference to the limbs, girdles in pigeon, and jaw suspension in mammals.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
17.	II	SEM-IV  Full Marks: 30 Credit: 2	CC4-8-P	Comparative Anatomy of Vertebrates Lab	To identify the scales in fishes, the disarticulated skeleton of various vertebrate classes and the skull of a pigeon, herbivore and a carnivore mammal. Through model/picture be able to compare the heart and brain of various vertebrates.

Overall Outcome of the course CC4-8:	<b>CO1.</b> Clear idea about how physiological systems differ in different vertebrates. <b>CO2.</b> Knowledge about evolution of different physiological systems in different vertebrates. <b>CO3.</b> Practical knowledge about different organs using models and pictures. <b>CO4.</b> Practical study of different types of bones in vertebrates.
---	---

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
18.	II	SEM-IV	CC 9  CC4-9-TH	Animal Physiology: Life Sustaining Systems  Full Marks: 50 Credit: 4	<b>Unit 1:</b> To understand how the gastro-intestinal tract is organized and functions, and the specifics of the process as to how food is digested and Carbohydrates, Lipids and Proteins are absorbed in humans. <b>Unit 2:</b> To understand the mechanism of respiration with an extended knowledge on respiratory volumes and capacities, transport of Oxygen and Carbon dioxide in blood their dissociation curves and the factors influencing it and respiratory pigments. <b>Unit 3:</b> To be able to explain the structure and functions of haemoglobin. To have a detailed understanding of the blood clotting system, process of Haematopoiesis and the blood groups. <b>Unit 4:</b> To elaborately understand the Coronary Circulation, structure and working of conducting myocardial fibres, origin and conduction of cardiac impulses and Cardiac Cycle and Cardiac output. <b>Unit 5:</b> To understand the process of thermoregulation by studying the mode of thermoregulation in camel and polar bear. To understand the physiology of osmoregulation in aquatic vertebrates. <b>Unit 6:</b> To have a detailed knowledge of the structure of Kidney and its functional unit. To understand the physiology of urine formation and regulation of acid-base balance.

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
19.	II	SEM-IV	CC4-9-P	Animal Physiology: Life Sustaining Systems Lab	To be able to experimentally determine the ABO blood group, estimate content of haemoglobin using Sahl's Haemoglobin meter, identify the various blood cells in human and haemolymph of cockroach and view the measurement of blood pressure by a digital meter. To have a hands-on training in preparation of haemin crystals and haemochromogen crystals.

Overall Outcome of the course CC4-9:	<b>CO1.</b> Clear idea about how physiological systems function. <b>CO2.</b> Knowledge about thermoregulation and osmoregulation in land and aquatic vertebrates respectively. <b>CO3.</b> Practical knowledge about blood composition and group determination in humans and hemolymph in cockroach.
---	--

SL	Part	Semester	Course Code <b>ZOOA</b>	Course Name	Course Outcome
20.	II	SEM-IV	CC10  CC4-10-TH	Immunology  Full Marks: 50 Credit: 4	<b>Unit 1:</b> Basic knowledge of cells & organs of immune system. <b>Unit 2:</b> Understand types of immunity. <b>Unit 3:</b> Idea on Antigen, factors of immunogenicity, epitopes & their actions. <b>Unit 4:</b> Understand Antibody, its type & its role in host defense mechanism, outline key events and cellular players in Antigen antibody interaction. <b>Unit 5:</b> Develop knowledge on MHC, T cell receptor its structural & functional properties & its importance in immune system <b>Unit 6:</b> Idea on types, properties and functions of cytokines. <b>Unit 7:</b> Learn Complement system pathways & defense mechanism. <b>Unit 8:</b> Develop knowledge on different types of Hypersensitivity. <b>Unit 9:</b> Learn about Vaccine, its type & role to enhance immunity in a body.

SL	Part	Semester	Course Code <b>ZOOA</b>	Course Name	Course Outcome
21.	II	SEM-IV Full Marks: 30 Credit: 2	CC4-10-P	Immunology Lab	Brief idea & histological study of lymphoid organs, Demonstration of ELISA.

Overall Outcome of the course CC4-10:	<b>CO1.</b> Basic knowledge of immunological processes at a cellular and molecular level including Host defense mechanism. <b>CO2.</b> Central immunological principles and concepts, relation & role of cells to maintain the immunity system in a body. <b>CO3.</b> Understand the principles governing vaccination and the mechanisms of protection against infectious diseases. <b>CO4.</b> Understand and explain the basis of allergy and allergic diseases. <b>CO5.</b> Learn Immunotherapy Techniques.
--	--

SL	Part	Semester	Course Code ZOOA	Course Name	Course Outcome
22.	II	SEM-IV	SEC B SEC(B) -4-1- TH	SEC-1 Aquarium Fish Keeping  Full Marks: 80 Credit: 2	<p><b>Unit 1:</b> To have an overview of the potential scope of Aquarium Fish Industry as a Cottage Industry. To have a knowledge on the various Exotic and Endemic species of Aquarium Fishes.</p> <p><b>Unit 2:</b> To be able to identify the common aquarium fishes basing on their common characters, sexual dimorphism and habitat.</p> <p><b>Unit 3:</b> To have a thorough knowledge on the nutritional value, availability and culture and preparation of various fish feed.</p> <p><b>Unit 4:</b> To gain knowledge on the methods of fish transportation with reference to the handling, packing and forwarding techniques.</p> <p><b>Unit 5:</b> To be able to successfully set -up and maintain an aquarium fish farm in a cost-effective manner, as a cottage industry.</p>

Overall Outcome of the course SEC (B) 4-1:	<b>CO1.</b> Descriptive knowledge about Aquarium fish keeping comprising aquarium industry, biology of aquarium fishes, their feeding habits, how they are maintained and transported including various examples (both exotic and endemic).
--	---

#### COURSE OUTCOME (Zoology General)

SL	Part	Semester	Course Code ZOOG	Course Name	Course Outcome
1.	I	SEM-I	CC1/GE1 CC1-1-TH CC1-1-P	Animal Diversity	Introduction to Animal kingdom, understanding the diversity, classification of the animal world, along with practical identification of various animals including learning their systematic positions.
2.	I	SEM-II	CC2/GE2 CC2-2-TH CC2-2-P	Comparative Anatomy & Developmental Biology	This course offers a comparative account of various physiological systems found in different vertebrates. In addition, a portion embryology is also dealt with great details. Further, course offers practical learning about bones, larval stages and embryonic developmental stages.
3.	II	SEM-III	CC3/GE3 CC3-3-TH CC3-3-P	Physiology and Biochemistry	Theory Course is a combination of two areas namely physiology and biochemistry while practical deals primarily with histology and also few biochemical analyses.
4.	II	SEM-IV	CC4/GE4 CC4-4-TH CC4-4-P	Genetics & Evolutionary Biology	Basics of Mendelian Genetics and experimental verification of the Mendelian ratio using Chi square test. Knowledge about human aneuploidy using photograph of karyotype. Evolutionary principles and study of phylogeny of horse from diagram of skull and limb, Identifying Darwinian finches from photographs.

**COURSE OUTCOME (Zoology Honours and General --1+1+1 System)**

Course Name	Paper	Course Outcome
Bsc. Zoology Honours  (Part III)	Paper 5  Unit I Unit II	<p><b>CO1.</b> Consists of two units that covers broad topics from Molecular Biology, Parasitology and Microbiology and Immunology. Students get a detailed idea on Genome and Proteome analysis using advanced methods in molecular biology that is currently in use in various laboratories. Students in this section also learn about Gene regulation at genetic and epigenetic level, DNA repair mechanisms and genetic disorders.</p> <p><b>CO2.</b> Students are introduced to microbial world surrounding us, their relation to common diseases in man, how they are cultured in labs including concept of vector and life cycles of some important parasites.</p> <p><b>CO3.</b> Outline of immunological processes at a cellular and molecular level including Host defense mechanism. Understanding the principles governing vaccination and the mechanisms of protection against infectious diseases that is very relevant in the current context.</p>
	Paper 6  Unit I Unit II	From this section students mostly acquire knowledge on different neuro endocrine integration evident in animal body along with applied zoology. This idea may help them to get employment opportunity in future.
	Paper 7  Practical	Practical experience on few techniques on Molecular Biology, Immunology, Histology Parasitology and physical visit to museum to study different adaptations found in animals.
	Paper 8  Practical	Apart from studying principles of instrumentations students prepare two environmental audit reports of a particular area. They also visit a suitable ecosystem and prepare a field report. In this process they get an idea about various diversity indices, how they are calculated, presented with proper explanation and interpretation.
Bsc. Zoology General  (Part III)	Paper IV  Group A Group B Group C Group D	This course covers three theoretical sections that covers Applied Zoology, Evolutionary Biology, Parasitology and Immunology. Outline knowledge on applied zoology will help students to make successful career choices or engage in entrepreneurship in future. Further they also come to know about few parasites and their impact on human health. Brief knowledge on evolution and adaptation is also achieved. Practical training ensures some experimental evaluations including one field training on species diversity of a local area.

**Netaji Nagar College for Women**  
**Department of Zoology**  
**COURSE OUTCOME (Zoology Honours)**

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
1.	III	SEM-V	CC5-11-TH	Ecology  Full Marks: 50 Credits: 4	<p><b>Unit 1:</b> Students will get an idea about basic concepts of ecology. Concepts on physical factors &amp; The Biosphere. Students will be able to understand the correlation between components of the ecology.</p> <p><b>Unit 2:</b> Learners will achieve knowledge about attributes of animal population, specific factors affecting its growth and its impact on the population of other life form. They also learn about Population regulatory factors, Population Interactions, &amp; Competition concepts.</p> <p><b>Unit 3:</b> Basic idea on Community concept including factors controlling it. Concept of Vertical stratification, Ecotone and edge effect. Ecological succession steps in an ecosystem.</p> <p><b>Unit 4:</b> To comprehend the structural and functional components of an ecosystem, by studying in detail the examples of different ecosystems.</p> <p><b>Unit 5:</b> To study Biodiversity and understand the various aspects for conservation of wildlife. To have knowledge of endangered species and study their conservation strategies.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
2.	III	SEM-V  Full Marks: 30 Credits: 2	CC5-11-P	Ecology Lab	<p>1. Students will learn to determine the population density in a natural/hypothetical community by quadrat method and calculation of Shannon-Weiner diversity index for the same community.</p> <p>2. To be able to study an aquatic ecosystem elaborately by studying its biotic and abiotic components. To be experimentally able to determine the area, temperature, salinity, pH, dissolved Oxygen content chemical oxygen demand and free CO<sub>2</sub> of an aquatic ecosystem.</p> <p>3. Students will prepare a Report on a visit to National Park/Biodiversity Park/Wild life sanctuary/ any place of ecological interest/ ecological uniqueness/ Zoological Garden.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
3.	III	SEM-V	CC5-12-TH	Principles of Genetics  Full marks: 50 Credits:4	<p><b>Unit 1:</b> To understand the basis of heredity through Mendel's laws of inheritance and to study different exceptional conditions where these laws are not applicable.</p> <p><b>Unit 2:</b> To study the chromosomal basis of inheritance and understand the concept of linkage and crossing over.</p> <p><b>Unit 3:</b> Students will learn in details about different types, basis and detection of mutation.</p> <p><b>Unit 4:</b> Students will learn about mechanism of sex determination and dosage compensation of <i>Drosophila</i> and man.</p> <p><b>Unit 5:</b> To study mechanism of extra chromosomal inheritance in <i>Paramoecium</i> and snail.</p> <p><b>Unit 6:</b> To study the genetic fine structure by complementation test in Bacteriophage.</p> <p><b>Unit 7:</b> To have comprehensive idea about different types of transposable genetic elements in prokaryotes and eukaryotes.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
4.	III	SEM-V  Full Marks: 30 Credits: 2	CC5-12-P	Principles of Genetics Lab	<p>1. Students will learn analysis for different genetic ratios by Chi square test.</p> <p>2. Learn to identify chromosomal aberration in <i>Drosophila</i> and man.</p> <p>3. Analyze pedigree of inherited traits in animals.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
5.	III	SEM-V	DSE(A)-5-1-TH	Parasitology  Full marks: 50 Credits:4	<p><b>Unit 1:</b> Students will get idea on Parasitology including host parasite relationship.</p> <p><b>Unit 2:</b> Students will learn about parasitic protists including their morphology, life cycle, prevalence, epidemiology, pathogenicity, diagnosis, prophylaxis and treatment of <i>Giardia intestinalis</i>, <i>Trypanosoma gambiense</i>, <i>Leishmania donovani</i>.</p> <p><b>Unit 3:</b> Students will learn about parasitic Platyhelminthes including their morphology, life Cycle, prevalence, epidemiology, pathogenicity, diagnosis, prophylaxis and treatment of <i>Schistosoma haematobium</i>, <i>Taenia solium</i>.</p> <p><b>Unit 4:</b> Students will learn about parasitic nematodes including morphology, life Cycle, prevalence, epidemiology, pathogenicity, diagnosis, prophylaxis and treatment of <i>Ascaris lumbricoides</i>, <i>Ancylostoma duodenale</i>, <i>Wuchereria bancrofti</i>. They also get knowledge on Nematode plant interaction.</p> <p><b>Unit 5:</b> To study the biology, importance and measures to control various parasitic arthropods.</p> <p><b>Unit 6:</b> To study the vertebrate parasites by studying their adaptations, behavior and the effect they have on their host.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
6.	III	SEM-V  Full marks:30 Credits:2	DSE(A)-5-1-P	Parasitology Lab	<p>1. Students will learn about life stages of <i>Giardia intestinalis</i>, <i>Trypanosoma gambiense</i>, <i>Leishmania donovani</i>, <i>Plasmodium vivax</i>, <i>Plasmodium falciparum</i> through permanent slides/micro photographs.</p> <p>2. Students will learn about adult and life stages of <i>Schistosoma haematobium</i>, <i>Taenia solium</i> through permanent slides/micro photographs.</p> <p>3. Students will get knowledge about adult and life stages of <i>Ancylostoma duodenale</i> through permanent slides/micro photographs.</p> <p>4. To be able to identify monogenean from the gills of fish and nematode/cestode parasites from the intestine of a poultry bird.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
7.	III	SEM-V	DSE(B)-5-2-TH	Reproductive Biology  Full Marks:50 Credits: 4	<p><b>Unit 1:</b> To understand the hormones involved in the regulation of the reproductive system, their secretion, regulation and mode of action. To also gain knowledge on the development of the reproductive system.</p> <p><b>Unit 2:</b> Learners will achieve knowledge about functional anatomy of male reproductive structures, histology of testes, hormonal regulation ad functions.</p> <p><b>Unit 3:</b> Basic idea on functional anatomy of female reproductive structures, histology of ovary, hormonal regulation ad functions.</p> <p><b>Unit 4:</b> To understand the cause, diagnosis and management of infertility and also study the available assisted reproductive technologies and the modern contraceptive methods.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
8.	III	SEM-V  Full marks:50 Credits:2	DSE(B)-5-2-P	Reproductive Biology Lab	<p>1. To study the basics of setting up and maintenance of a animal house with a brief knowledge of breeding techniques.</p> <p>2. To be able to prepare permanent slides of endocrine glands, through fixation, preparation of paraffin blocks, sectioning and staining.</p> <p>3. Students will get practical knowledge about HE staining method and examine various sections of endocrine glands.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
9.	III	SEM-VI	CC6-13-TH	Developmental Biology  Full Marks:50 Credits: 4	<p><b>Unit 1:</b> Students will get a detail idea on early embryonic development including Gametogenesis, Types of eggs, Egg membranes; Fertilization procedure in sea urchin and mammal; Concepts on cleavage; They will learn about developmental stages &amp; its type including Blastula [frog and chick]; Fate map formation in chick embryo, fate mapping using vital dye and radioactive technique; Gastrulation in frog and chick; Embryonic induction and organizers in <i>Xenopus</i> (Spemann &amp; Mangold's experiment)</p> <p><b>Unit 2:</b> Study of late embryonic developmental stages in chick and humans.</p> <p><b>Unit 3:</b> Study of post embryonic developmental stages of brain and eye in chick.</p> <p><b>Unit 4:</b> Students will get knowledge on implications of Developmental Biology including In vitro fertilization (IVF), Stem cell: Concept of potency, types, markers, applications of stem cell therapy in bone marrow transplantation and cartilage regeneration.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
10.	III	SEM-VI  Full marks:50 Credits:2	CC6-13-P	Developmental Biology Lab	<p>1. To study whole mounts of developmental stages of chick embryo.</p> <p>2. To study developmental stages and life cycle of <i>Drosophila</i>.</p> <p>3. To study different sections of placenta.</p> <p>4. To identify larvae of different invertebrate phyla.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
11.	III	SEM-VI	CC6-14-TH	Evolutionary Biology  Full Marks:50 Credits: 4	<p><b>Unit 1:</b> Students will get an idea on Origin of Life (Chemical basis), &amp; RNA world hypothesis</p> <p><b>Unit 2:</b> Historical review of Evolutionary concepts: Lamarckism, Darwinism and Neo Darwinism</p> <p><b>Unit 3:</b> Students will get knowledge on Geological time scale. They also get information on Fossil, types and age determination by Carbon dating, Evolution of horse.</p> <p><b>Unit 4:</b> Student comes to know about natural Selection.</p> <p><b>Unit 5:</b> Students will learn about species concept, Isolating mechanisms, modes of speciation; Speciation by chromosome rearrangement in <i>Drosophila</i>. Adaptive radiation/macroevolution (exemplified by Galapagos finches).</p> <p><b>Unit 6:</b> Information on origin and evolution of Man. Unique Hominid characteristics contrasted with primate characteristic</p> <p><b>Unit 7:</b> Student will learn about population genetics including problems to estimation of allelic and gene frequencies.</p> <p><b>Unit 8:</b> Extinction, back ground and mass extinctions, detailed example of K-T extinction.</p> <p><b>Unit 9:</b> Students will learn to study Phylogenetic trees &amp; its construction. Interpretation of Phylogenetic tree using parsimony, convergent and divergent evolution.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
12.	III	SEM-VI  Full Marks:30 Credits: 2	CC6-14-P	Evolutionary Biology	<p>1. Study of fossils from models/ pictures.</p> <p>2. Study of homology and analogy from suitable specimens.</p> <p>3. Student will learn to study Phylogenetic trees, Construction &amp; interpretation of Phylogenetic tree using parsimony, Construction of dendrogram following principles of phenetics &amp; cladistics from a data table.</p>

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
13.	III	SEM-VI	DSE(A)-6-1-TH	Animal cell Biotechnology  Full Marks:50 Credits: 4	<b>Unit 1:</b> To understand concept and scope of biotechnology
					<b>Unit 2:</b> Learners will achieve knowledge about various techniques in gene manipulation.
					<b>Unit 3:</b> Basic idea on animal cell culture.
					<b>Unit 4:</b> To understand the process of fermentation, centrifugation, chromatography and lyophilization.
					<b>Unit 5:</b> To understand application of biotechnology in health.

SL.	Part	Semester	Course code <b>ZOOA</b>	Course Name	Course Outcome
14.	III	SEM-VI  Full marks:50 Credits:2	DSE(A)-6-1-P	Animal cell Biotechnology Lab	1. To learn sterilization techniques and preparation of culture media.  2. To study animal DNA isolation technique followed by quantification of DNA  3. To study different molecular biology techniques like western/southern blot PCR microarrays etc.

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
15.	III	SEM-VI	DSE(B)-6-2-TH	Fish and Fisheries  Full Marks:50 Credits: 4	<p><b>Unit 1:</b> To understand the diversity of fishes and study their similarities and differences in the mode of feeding, reproduction and habitat.</p> <p><b>Unit 2:</b> To study the various morphological features of fishes that enable them to their mode of life and to study how these features aid in locomotion, respiration, gas exchange etc.</p> <p><b>Unit 3:</b> To briefly understand the capture fisheries and to study the various technologies used for the same. To also have knowledge of the laws that regulate the industry.</p> <p><b>Unit 4:</b> To gain knowledge on the techniques, both primitive and advanced, used to culture fin fishes. To study the various aspects of fin fish culture, from building up of the infrastructure, stock and maintenance of the fishes.</p> <p><b>Unit 5:</b> To study how fishes are used as models for biological/ medical research. To study in brief zebrafish as a model organism and also the various genetically modified fishes.</p>

SL.	Part	Semester	Course code ZOOA	Course Name	Course Outcome
16.	III	SEM-VI  Full marks:30 Credits:2	DSE(B)-6-2-P	Fish and Fisheries Lab	To be able to identify and classify various species of fishes, the different scales found in fishes, the various fishing crafts and gears. To be able to measure the water quality and have knowledge of the ideal water conditions for fish culture.

**Netaji Nagar College for Women**  
**Department of Zoology**  
**COURSE OUTCOME (Zoology General)**

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
1.	III	SEM-V	SEC-A-5 -3-TH	Sericulture  Full Marks: 80 Credits: 2	<p><b>Unit-1:</b> Curiosity will be ignited in the mind of learners, to know more about Silk worms, History &amp; present status of silk worldwide.</p> <p><b>Unit-2:</b> Students will come to know about Life cycle of <i>Bombyx mori</i>; Structure of silk gland and secretion of silk.</p> <p><b>Unit-3:</b> Learners will achieve knowledge on rearing of Silkworms. They possess an idea on the whole process from Selection of mulberry variety and establishment of mulberry garden, Rearing house and rearing appliances. Necessity &amp; proper use of Disinfectants. A clear knowledge on Silkworm rearing technology, Types of mountages; Spinning and harvesting and storage of cocoon.</p> <p><b>Unit-4:</b> Learners gets knowledge on pests and diseases of Silk worms, Pathogenesis of silkworm diseases including control and prevention methods.</p> <p><b>Unit-5:</b> Entrepreneurship in Sericulture including, Prospectus of Sericulture in India, Sericulture industry in different states, employment, potential in mulberry and non-mulberry sericulture. Learners would be inspired to choose career options in the field of Sericulture industry.</p>

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
2.	III	SEM-V	DSE-A-5-2-TH	Aquatic Biology  Full Marks: 50 Credits: 4	<p><b>Unit-1:</b> An introduction to aquatic biomes and freshwater ecosystems.</p> <p><b>Unit-2:</b> To study lotic and lentic ecosystems with a knowledge on the abiotic components which regulate the ecosystem and biotic components and their adaptations. And to study the biogeochemical cycles of major nutrients of the lake ecosystem.</p> <p><b>Unit-3:</b> Learners will achieve knowledge on different aspects of Marine biology.</p> <p><b>Unit-4:</b> To understand the different parameters of aquatic pollution and to study their causes and remedial measures.</p>

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
3.	III	SEM-V  Full Marks: 30 Credits: 2	DSE-A-5-2-P	Aquatic Biology	1. To identify macrophytes, phytoplankton zooplanktons present in aquatic ecosystem. 2. To be able to estimate the amount of dissolved oxygen and carbon dioxide of an aquatic ecosystem. 3. Field report on any aquatic ecosystem.

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
4.	III	SEM-VI	DSE-B-6-2-TH	Ecology& Wild life Biology  Full Marks: 50 Credits: 4	<p><b>Unit-1:</b> To understand basic concept of ecology. Students will be able to understand ecological concepts &amp; level of organization. Students will be able to understand the correlation between components of the ecology.</p> <p><b>Unit-2:</b> Learners will achieve knowledge about attributes of animal population, specific factors affecting its growth and its impact on the population of other life form. Get knowledge on Population regulatory factors.</p> <p><b>Unit-3:</b> Learners achieve knowledge on community characteristics including species diversity, abundance, dominance, richness, Vertical stratification, Ecotone and edge effect.</p> <p><b>Unit-4:</b> Knowledge of different components of ecosystem. Learners will grasp the concept of interdependence and interaction of physical, chemical and biological factors in the environment.</p> <p><b>Unit-5:</b> Knowledge on wildlife conservation in India in the light of guidelines form different relevant governing agencies. Mainly focusing on Tiger conservation – including Tiger reserves in India; Management challenges in Tiger reserve. Learners would be inspired to choose career options in the field of wild life conservation, research, photography and ecotourism.</p>

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
5.	III	SEM-VI  Full Marks: 30 Credits: 2	DSE-B-6-2-P	Ecology& Wild life Biology	<p>1. Students will be skilled to Identify of flora, mammalian fauna, avian fauna.</p> <p>2. Information &amp; method of application of basic equipment needed in wildlife studies use, care and maintenance.</p> <p>3. Students will be able to Identify the animals through pug marks, hoof marks, scats, pellet groups, nest, antlers, etc.</p> <p>4. Study of different parameters of aquatic ecosystem through experimental methods.</p>

SL.	Part	Semester	Course code ZOOG	Course Name	Course Outcome
6.	III	SEM-VI	SEC-B-6-4-TH	Medical diagnosis  Full Marks: 80 Credits: 2	<p><b>Unit-1:</b> To understand basic concept of diagnostic methods used for analysis of blood.</p> <p><b>Unit-2:</b> Learners will achieve knowledge about diagnostic methods used for urine analysis.</p> <p><b>Unit-3:</b> Learners achieve knowledge on causes, types, symptoms, complications, diagnosis and prevention of non-infectious diseases.</p> <p><b>Unit-4:</b> Learners achieve knowledge on causes, types, symptoms, complications, diagnosis and prevention of infectious diseases.</p> <p><b>Unit-5:</b> Knowledge on clinical biochemistry.</p> <p><b>Unit-6:</b> Knowledge on clinical microbiology.</p> <p><b>Unit-7:</b> Knowledge on different types of tumors.</p>
